Yahoo Group summary: The Official discussion list of the Bicycle Mobile Hams of America

These Yahoo Groups messages were archived in WARC format by ArchiveTeam in 2016. This PDF was generated by Digital Library of Amateur Radio & Communications from the WARC files in 2026.

Date span: 2000-10-07 through 2016-09-19

Source WARC: bmha.Fap9dTA.warc.gz

Source item: https://archive.org/details/yahoo-groups-2016-10-15T14-19-03Z-a80b5d

Messages included in this PDF: 3133

Message records with no body available in the source archive: 1

Messages omitted as spam from this PDF: 48

Yahoo replaced the domain portions of email addresses with @... in the archived messages. Characters lost in Yahoo's archived text appear as ?.

Messages are presented in ascending Yahoo message-ID order. Gaps indicate records absent from the source WARC or messages omitted from this PDF as spam.

1. Bicycle Mobile Hams on eGroups, At Last!!!

Yahoo group: BMHA
Date: 2000-10-07 21:46:39 UTC
From: Scott KE4WMF
Topic: 1 Message: 1

Hi,

I finally got the list up and going. I'm working on getting the name changed to BMHA. I was close, but a judgement error and subsequent technical difficulty are the only hold-up. I'll let everyone know when the name has successfully changed.

The new Newsletter is at the printer as I type. It will announce the location of this discussion list. In the meantime, please invite as many BMHA'rs as you can. Please use the Invite option, not the one that signs them up automatically.

Let the fun begin!

73,

Scott Farrell, KE4WMF
Owner/Moderator
Editor, BMHA Newsletter

2. Let's get started!

Topic: 2 Message: 2

I've some experience with electronic forums such as this one.

They start of slow, but with participation, can really skyrocket.

Please participate and add your thoughts. Your 'simple solution' can
be the answer which some other bicycling ham is desperately seeking.
(See my next post about stringing an antenna on your bicycle).

As always, please also go to our website at
http://www.LaFetra.com/BMHA and send me any feedback you have.

3. Mounting your antenna

Yahoo group: BMHA
Date: 2000-10-07 23:17:12 UTC
From: Skip@LaFetra.com
Topic: 3 Message: 3

Many BMHA members put an antenna on a back ("luggage") rack. I don't -- mine is up front where I can't kick it mounting the bike.

But a long antenna is hard to keep steady. I've found what I consider the "perfect" solution.

The bottom of my antenna is at the base of a handlebar bag (mine is the type which has bungee-type cords down to the front axle, but this may be overkill). Then I've taken a piece of twine and stretched it from one brake hood to the other (right were the brake cable comes out the top). This is out-of-the-way and doesn't impede my hand placement at all.

I've a small loop in the twine about 4 inches in from the left brake hood. You've guessed it -- my antenna projects through this loop.

Very secure. Very tolerant of bumps. Doesn't strain any connectors anywhere. I've used this setup for darn near a decade with splendid results.

- Skip AA6WK

5. HF on bicycle

Yahoo group: BMHA
Date: 2000-10-20 23:03:41 UTC
From: Mark R. Mills
Topic: 5 Message: 5

Hi, I am new to this reflector and Amateur radio. I have been a ham 18 months now. My main interest is morse code and 10 meters. I am sending in my dues to BMHA this week to become a member. I think it would be very unique to have a QSO on a bicycle, especially to the other station receiving, I bet it raises many eyebrows. Can I use a vertical antenna similar to a hamstick on a bicycle for hf (10 meters) use, will this put out good? This is all new to me, so I might have a few questions in the future which I guess is what this reflector is all about. 73's Mark KG4CYO

6. Re: [BicycleMobileHams] HF on bicycle

Yahoo group: BMHA

From: VE3JC - John C
Topic: 5 Message: 6

Hi Mark, and welcome to the world of hf cw bicycle mobile. A hamstick
and cw will work great on 10m, bicycle mobile, when the band is open.
Check out my website (below), and Russ KB8U's (see BMHA page member
links) for ideas on mounting mobile vertical antennas and iambic
paddles.
Hope to work you 2X cw bicycle mobile some day!

11. New HAM seeking information

Yahoo group: BMHA
Date: 2000-10-31 04:29:39 UTC
From: Mark Whitaker
Topic: 11 Message: 11

Salutations all,

I recently passed my Technician exam and would like to be able to combine my bicycling hobby with my newest hobby. What do I need in the way of equipment for this project? What wattage can I safely transmit from an antenna that is within close proximity as would be the case on a bike?

Any help and suggestions will be most appreciated.

Thanks!

Mark C. Whitaker

Yahoo group: BMHA
Date: 2000-10-31 16:29:36 UTC
From: ke4wmf@aol.com
Topic: 11 Message: 12

Hi, > What do I need in > the way of equipment for this project? What wattage can I safely > transmit from an antenna that is within close proximity as would be > the case on a bike? > Congratulations! You can start with something as simple as an HT, an improved antenna for the HT (1/2-wave is best), and a PTT boom mic. Then work your way up as interest, necessity, and money allows. Visit my ham radio page at http://members.aol.com/ke4wmf/HamRadio.html Go to the bottom of the page and you'll see two articles about my bicycle mobile setup. One has appeared in the BMHA Newsletter. The other will come soon. 73, Scott A. Farrell, KE4WMF BMHA Newsletter Editor < [Non-text portions of this message have been removed]

13. CQ Bicycle mobile QRP'ers

Yahoo group: BMHA
Date: 2000-11-15 00:58:35 UTC
From: VE3JC - John C
Topic: 13 Message: 13

I have two announcements that may be of interest to bicycle mobile qrp operators:

1. The 2001 QRPedal-expedition to Dayton!

A small international contingent of QRPedalers are planning to cycle from Canada to Dayton FDIM/Hamvention in May 2001. Starting on the saturday or sunday before Dayton, we will cycle across part of Southern Ontario, invade the US via the Sunday evening Lake Erie ferry (Kingsville > Sandusky) and arrive in Dayton QRP-central the day before FDIM (for steak and honey-bourbon salmon at the Lone Star wednesday evening!)
I will post to the list with more information, as the route and other details take shape. We will certainly hope to have the chance to work many of you from the road, or from the evening campsite, or even from the ferry! We could accommodate several more keen riders, if anyone is interested.

2. Email reflector for Bicycle Mobile Hams!

BMHA now has an eGroups discussion list, so you should certainly subscribe if you are interested in bicycle mobiling. Info can be found at:
http://www.egroups.com/group/BicycleMobileHams

15. looking for group for event

Yahoo group: BMHA
Date: 2000-11-27 03:56:10 UTC
From: Mickie Newnam
Topic: 15 Message: 15

Hi! A friend and I put on a competitive trail ride in July at Caesar Creek State Park in Waynesville OH. I'm looking for a ham group to work the road crossings, which will make things safer for our riders and much easier on management. I noticed in the membership roster that there are a number of members from the Dayton and Cincinnati areas and thought you might be interested. I am also co-managing a ride in September near Bainbridge OH at Pike Lake State Forest and would love a group for that as well if it is possible. The hills there may make radio communications difficult.
If anyone is interested or wants more info, please email me privately since I'll be unsubscribing once this posts. thanks!
Mickie

16. Standby for Name Change...

Yahoo group: BMHA
Date: 2000-11-30 22:35:34 UTC
From: Scott KE4WMF
Topic: 16 Message: 16

Hi,

As promised in the e-mail footers, I'm going to attempt to change
the name to "BMHA." The next message you receive should come
from "BMHA@...." Please do not respond to this message.

Thanks,

Scott A. Farrell, KE4WMF

17. Name Change a Success!!!

Yahoo group: BMHA
Date: 2000-11-30 22:50:46 UTC
From: Scott KE4WMF
Topic: 17 Message: 17

Hi,

I was administratively successful at changing our eGroups name to BMHA. This message will tell us if everyone is getting the messages properly under the new name.

Since there are less than 30 of us, feel free to respond to this message with a quick test. I'll go first. I'll return to the board on Monday and delete all of the little test messages in order to reduce clutter in the archive. I'm sure everyone will make the change okay since most of us are signed up for individual e-mails. I'm not sure how the digest-guys will fair in this change. Please be patient if it seems you are getting bombarded with "test" messages. There are only 29 of us and it should stop soon.

Thanks for your patience,

Scott

21. 12V lighting system

Yahoo group: BMHA

From: Gene Floyd
Topic: 21 Message: 21

It's not mentioned on their website, but the lights at
http://www.bicyclelights.com/ are 12V. Thought some of y'all might find
that interesting and/or useful.

22. Free to upload files...

Yahoo group: BMHA
Date: 2000-12-01 04:18:17 UTC
From: ke4wmf@aol.com
Topic: 22 Message: 22

Hi, List members may now upload files to BMHA@.... All I ask is that you create folders by callsign and keep your files in your folders. My folder is already setup as an example. Also, please try to keep your files small. I'm not imposing size restrictions. But please avoid posting full-screen images that take forever to download and hog disk space. Take a look at mine... they're half-screen sized jpegs and, consequently, relatively small. Also, copyrighted material (professional photos and programs) will be deleted immediately. Thanks for your cooperation. Enjoy the new feature, Scott A. Farrell, KE4WMF BMHA Newsletter Editor http://members.aol.com/ke4wmf [Non-text portions of this message have been removed]

Hi gang,

Yes it works from over here as well! I see from Scot's posting that there are 29 of us, I guess that means 28 across the 'pond' and me over here in good ole' Blighty. So, I'd like to kick off some discussion by asking, what kinda' bicycle hamming are you guys 'n' gals doing over there? is it 'bicycle mobile'? cycle camping and ham radio when you've set up camp for the evening? what sorts of cycles are you using and how about antennas? Ok, enough questions, looking forward to meeting some of you either via the e-mail or on the air.

Perhaps others will respond with the same subject line to keep the this discussion organized. Most of us actually operate the ham radios FROM our bicycles while riding. Hearing, "You're on a bicycle?" is half the fun! :-) Sometimes I jump on the bike just to talk on the radio since I don't have a rig at home. I wouldn't mind getting MFJ's 6m SSB QRP rig for the "campground" stuff. Visit my website for a full write up on my bicycle mobile station. I've also posted photos of it on the eGroups site. 73, Scott A. Farrell, KE4WMF BMHA Newsletter Editor http://members.aol.com/ke4wmf [Non-text portions of this message have been removed]

25. Re:[BMHA] Name Change a Success!!!

Yahoo group: BMHA
Date: 2000-12-01 14:55:45 UTC

Topic: 17 Message: 25

I haven't been lately (was out of biking for a while and then was sinking too much money into bikes to fix my radio when it broke....being a single parent forces you to make choices like that). I am now back into cycling (commuting 100+ miles/wk) and have my radio fixed. Now I just need to re-create the system I had before as I now have all the equipment except for a source of 12V power on the bike (radio internal batteries are shot) and to build another antenna (I have the materials, just haven't found the time).

The radio stuff:
HTX-202 mounted on the stem and handlebar with a piece of
leather belt and
a couple of velcro straps
12V gel-cell on rack
homemade speaker mic (butchered from RS speaker mic...moved mic element to boom made from coathanger wire and velcroed speaker portion to side of helmet)
J-pole antenna made from 19" of PVC with a RS mag-mount CB antenna stinger (39" long) mounted to the end at a 90 deg angle. I made a j-pole-type matching network from open-wire ladderline and stuffed it inside the PVC before capping both ends and clamping it to my rack. Worked as well as the mobile radio in the SAG wagons on the rides I covered.

The Bikes:

My "main squeeze" (at least for now)
Jamis Axis road bike with nothing special except the rack which currently holds the gel-cell for my lights and my panniers, plus reflectors everywhere, 2 blinkies on the back, Brooks B-17, Cinelli anatomical bar, Suntour bar-cons

Plus I'm building a "new" touring/commuting bike that can better handle the stresses of loaded touring and commuting. Also so that I can stop beating my road bike up on daily 20-mile commutes, and can strip it back down to the lean, mean road machine that it's supposed to be:

GT Tequesta MTB with Tioga City Slicker tires, mostly Deore LX components (whatever I could find used), Brooks B-17, Cyclocross drop bars (widest I could find with the ergo bend), bar-end shifters, 12V lighting system (http://www.bicyclelights.com), Dynohub with voltage-doubler/regulator for charging the battery (system in planning), fenders, full racks etc, ham radio equipment.

From: xtalradio@aol.com
Topic: 38 Message: 38

Greetings BMHAers,

Everyone is invited to the Saturday UTC QSOs with the HFpack group.
HFpack is a large egroup for portable, pedestrian, and human-powered mobiles.
It also keeps a database of distance records for DX QSOs between
Human-Powered-Mobiles "/HPM" and Pedestrian Mobiles. There are many active
stations on the air, including various bicycle mobiles.

HFpack Saturday UTC Schedule USB/CW
==HFpack(A)17:30UTC=21437kHz (Alternates 21432, 21442)
==HFpack(C)18:00UTC=28337kHz (Alternates 28317, 28327)
==HFpack(B)22:30UTC=18157kHz (Alternates 18152, 18162)
==HFpack(D)23:00UTC=28337kHz (Alternates 28317, 28327)
===CW welcome: up+700Hz or up+1kHz===

for more information about HFpack:

From: Upton, Shawn
Topic: 40 Message: 41

I haven't gotten into bicycle mobile yet, maybe this summer...

While in college, I commuted back and forth to campus (maybe 4 miles one way) on my bike. I put on the venerable rack over the back tire, and got a huge milkcrate that strapped onto that. When I a huge milkcrate, I mean the one that holds 6 gallons, not the usual 4. I used a small piece of wood, with appropriate holes drilled in it, inbetween the rack and the crate, to properly support the crate (otherwise it flexed too much under, say, a full load of laundry).

Needless to say, this wasn't a suspension bike. Nor was it a particularly light bike with the rack and all. But, due to the rack (and the board), I could carry heavy loads back and forth to campus (for awhile I was doing laundry once a week on campus), and it kept hot backpacks off my back, and carried things really easily (just throw it in the back, like it was truck or something).

Anyhow, once with such a contraption, it should be easy to attach away whatever antenna, battery, or whatever you want. Just cushion things really well.

I wouldn't want to go cross country on such a thing, but it does work well for just going across town and short trips.

For those looking for BMHA members nearby, I've restructured the roster to allow you to search by state.

Within a state, the roster is sorted by city.

To maintain an "appropriate" level of privacy, the roster only displays name, city, callsign, and email address. However, it also provides a link to QRZ.com, since that is "publicly available" FCC data.

Check it out! Either follow the link from BMHA's home page, or go direct at http://www.lafetra.com/bmha/Content/membership.asp

(In doing this, I used a several-months-out-of-date roster. I'll be putting the current roster up within the next week or so. Also, I noticed a minor bug that prevents displaying members who don't live in a state -- for example our European friends. This will also be fixed.)

Comments are always welcome.

Topic: 43 Message: 43

It's been a while, but I picked up a new Yaesu FT-817 160meter-450MHz AM/FM/CW/SSB rig for the bike two days ago to replace the old Ten-Tec Argonaut 509 that I worked 96 countries and all 50 states on the bike from. Also, picked up a Yaesu FX-5R a few months back.

It's been cold and blustery up here in Milwaukee (30mph+ winds) but I was cycling around a little bit around noon today and worked Howard, VE3AXD in Toronto on 20m SSB who said I was doing just fine. The adrenalin is really percolating right now. The bike was all set up antenna/rig wise to cover 75m-10m CW/SSB and 2m FM previously, but I picked some additional resonators for 12m, 17m, and 30m, along with a Hamstick for 6m and a 440 MHz rubber duck.

I've got some lost time to make up and I'm back bicycle mobile this spring and summer to make the Argonaut days look like a warm-up...

I have a bicycle trip planned this June that I've been preparing for physically all fall and winter and I'll be operating from some pretty interesting places, so I'll be giving more info about that as that gets nearer.

More later...

Hey that sounds great! DXing on two wheels!

I'm kind of new to the list. Can you give some info about your setup? I have a Cannondale hybrid that I bought lat last year for cummuting. I have a six mile ride to work and I just bought an FT-817 to make it more fun. I don't yet have an antenna, so I am interested in how you have that set up. Also, do you use a hand mic or a headset? I am mostly a cw guy, so I was thinking about doing that on the bike too...perhaps with a paddlette and small memory keyer so I don't have to manually send name, qth, etc. every time.

Also, I just got a Bike Nasbar waterproof handlebar bag for the 817. I'm really anxious to get over my severe coughing from my recent cold so I can get back on the road (and warmer wx too...I'm not an ice biker yet!)

I have been thinking about the Comet 40m through 70cm antenna. Any comments, anyone? I have a rack on the rear of the bike that I can use for mounting.

Why not try a PW-1 or MP-1 antenna? It's like a miniature screwdriver
antenna. It can be taken apart and collapsed to fit into a small bag or box
when you need to go stealth or park the bike somewhere. Click here for more
info:
http://www.superantennas.com

I've used a number of rigs on my S&B SWB recumbent, and have used hamsticks successfully. ALways worry about the RF by my head though, even when using 2 watts of hf.

I am also setting up for bike mobile operating this summer
and am going to use the hustler antennas. They are not too big
and have always done a good job for me. True they are single
band but one band at a time is fine with me. They are inexpensive
if you get used ones at a hamfest. I have bought several for $10 or
so each. I mount them on the luggage rack with cb mirror mounts.
Just got a new ft-817 and anxious to try it. 73 Jim (N9BPE)

Mark, I have your application all OK. I am a little slow in getting to the new ones but just wanted to let you know you will be getting the newsletter soon. Since I am the delay, I plan to send you an extra back issue along with the current one.

If any others have sent an application this year and haven't heard, I have those also and will be mailing out the last and one past issue of the newsletter.

Appreciate the patience and glad to have Mark and any others join the group.

I know it's very simple to initiate through http://www.paypal.com....there
is a slight surcharge, but you could even add that as the extra fee for
those who prefer to pay that way. I have an account set up for collecting
charity donations (see http://www.tfn.net/~gfloyd7/cmn/) and it seems to
work quite well indeed.

Hello all,
It's great to see all the discussion regarding antenna choices, hf bike-mobiling, and cw operation. Be sure to check out the "member pages" from the BMHA website for lots of photo's and information on rig/antenna/key mounting. Also, the back issues of the newsletter are a valuable resource.

To comment on a couple of points raised in the last few days:

- regardless of which antenna you use, I like to keep the antenna well back from the bike. To minimize emf exposure, and to make it a lot easier to mount the bike, put your antenna on an extension pole behind the rear wheel. Check out my website for details and photos.

- I use an Outbacker Perth, which works well on all hf bands, and it is easy to change bands with a ten second rest stop! While these are very pricey, they often show up at fleamarkets for a reasonable price.

- Exciting to hear about all the 817's !! What a great rig for hf/vhf/uhf bicycle mobiling! Keep us posted on your adventures. The Outbacker Perth Plus gives HF plus 2m, so that might be a good antenna to consider.

- CW operation CAN be quite easy and safe. I am able to send quite easily while still keeping both hands on the handlebars, and near the brakes. See my site or Russ KB8U's for more details.

Russ and I, along with Ken VE3ELA are looking forward to our ride to Dayton and hope to see many of you at the BMHA forum. (http://www.geocities.com/ve3jc/fdimor.htm)

I went for a 36 km ride yesterday, but got caught in a blinding snowstorm. By the end of the ride, there was a solid coating of ice over most of the bike's components, and the chain was slipping - had to stop and chop ice off every few minutes. How depressing! Glad I decided to leave the radio at home!

Jim,

I just posted a message on the HFPACK group looking for comments on this very subject. I just picked up my new GT Nomad Ltd. bike thsi morning and I am now looking for ideas that will let me safely carry my SG-2020, 7ah Gel battery, tuner and some wire. I am looking at a rear mounted, over the tire rack with a black nylon zipper bag that attaches to the top of the rack. I have not considered HF mobile operation yet as I don't think I have enough hands.

On the way home I was on the cell phone and the 440 repeater at the same time and was having trouble steering :-) If I operated the SG-2020 one of the other radios would have to stay at home.

I use a pen. :-) Seriously, on the bike for my HF contacts I stop and grab a small notepad that I have real easy access to and quickly scribble the call, freq, signal report, qth,.. the important stuff, and then resume peddling continuing on with the qso. I actually write the "nice looking" info into my regular log later. It takes almost zero effort to stop the bike and do that, and just a few seconds time to preserve the important data. It doesn't take as much effort as it sounds like it might take. The "two microphones going at once, keep your feet peddling stuff...", I mean, it's just not that complicated. I go on trips where I'm gone three weeks at a time, and work many, many stations, and just don't have a problem.

Ned Mountain, WC4X and I used to work QRP bicycle mobile to bicycle mobile from Wisconsin to Georgia on 20m SSB back in the early 1990's and if you start all of that "Well how can you possibly do this and possibly do that at the same time... well, you, don't. A lot of it is common sense. The real problems are being out in places really far from nearby towns and hitting incredible downpours with no place to go, and severe lightning, severe squall lines with winds in excess of 60 mph, sprained ankles, etc. You don't have to talk every minute you're peddling either. If you hit rough traffic or roads, take care of business and deal with that, and when you feel comfortable getting in a QSO again, do that.

I'm 49 years old now and I've been bicycle mobile since the early 1970's, initially with a 3-speed Huffy Sportsman bicycle with a Lafayette HA-650 portable rig that had D-cells contained internally and put out 2.5 watts on 6m AM to a 54inch whip. In 1974 I got a Drake TR-22C 12 channel 2m rig that I fed into a 5/8 wave 2m antenna. Then I got a D-cell battery pack. Then I got a 12v gel-cel. Then I mounted a speaker and the microphone up front and the radio was in the back. In the 1980's an Icom IC-2AT and the Ten-Tec Argonaut went on the bike. In the 1990's I bought a Trek 7000. In 2000 I picked up a FX-5R, and now, in 2001, the FT-817. If you are going to try to adjust modulation, power levels, work cell phones, and other rigs at once you are going at it all wrong and will not have fun and probably end up hurting yourself in the process. This is a really exciting combination of hobbies that come together in one spot here with the BMHA and needs a lot of common sense to have fun and safety with.

Speaking of Ned, I remember working him and he had modified a Hamstick or some fiberglass type of whip so it was sorta like a Outbacker, but a lot less weight to it. He had re-wound it with taps every so often on the windings so he could instantly change bands by jumpering. His two watts from his bike down in Georgia sounded really good (5x7 to 5x8) on my bike's setup up here in Wisconsin while using it. Gee, I wonder if he still uses that? I'm tempted to go that way...

That new FT-817 is really amazing. I stopped at Radio Shack this past weekend and picked up a little 24" center-loaded CB antenna for $9.95 that has a PL259 connector on the end of it and then a 90 degree bend so it can be used right on the back of a rig. I adjusted it to have minimum SWR at 28.4 MHz using the FT-817's built-in SWR bridge. Monday evening I had the rig sitting on the kitchen table, using the internal AA batteries (good for about 2.5 watts out) for power and the new 24" antenna sticking out of the back of the thing and I gave KP4DKE in Puerto Rico a call and he comes back and gives me a 5x7 report!!! He was 5x9++ . Just an easy QSO where I explained the rig, my QTH, etc. No problems at all.

62. Mic/speaker survey & my proposed setup

Yahoo group: BMHA

From: w.marty.ray@delphiauto.com
Topic: 62 Message: 62

I've heard a few comments about what you all are using, but, for good measure, here are some questions:

I'd like to know what kind of mic everyone is using.
For example do you use a hand mic and just pick it up when you want to talk?
Do you use a boom mic mounted on or near the handlebar with a ptt switch somewhere?
Do you use a helmet moutned boom mic or headset, etc.....

Also, how is the receive audio delivered to your ear.? Speaker, headphone, ead-bud, etc...

I'd like to make as few itterations as possible on my initial setup. Right now, it is looking like this:

- FT-817 in a waterproof handlebar bag using wood or plastic partitions lined with foam to keep it contained.
- Internal NiMH pack.
- Mic...not sure
- Speaker / earbud / headphone...not sure
- Antennas will be hamsticks w/ 3/8" mount (already have them) and 2m 5/8 NMO mount
using 1/8" aluminum off the back of the rack. Still haven't figured out how to get them to work
in close proximity to each other. Perhaps only mount one or the other and swap out when I want
to change bands. Or perhaps have one out the side and on out the back for separation...
- Paddles probably homebrew using spring steel or brass, setup to use without removing hand from grip.
- Small memory keyer next to rig to send the repetitive parts of a qso without using the paddles.

Just for background, this setup will go on my commuter bike, which is a Cannondale Hybrid with a rear pannier rack.

Also, how can I work 96 contries and 50 states? ;)

Marty,

I have all of the same questions that you just posed. The only difference in our hardware is that my radio is an SG-2020 and the bike is a GT Nomad LTD hybrid. I plan to use hamsticks as well and a Larsen 270 for vhf/uhf with a yaesu FT50RD.

I used to operate motorcycle mobile back in my younger days (I'm 57) and found that for safety's sake a helmet mounted earphone/mic was a real plus with either VOX (not recommended if you might make comments about the surrounding environment) or handlebar mounted PTT.

The antenna mounts shouldn't be a big problem but I have not decided on a rear rack. A bicycle flag is a great form to wind your own antenna onto as well.

What is the "pannier" rack and where might I see a picture or two of this beast?

Yeah, I have a Larsen 2/70 too...but we don't do much 70cm up this way.

"...a helmet mounted earphone/mic was a real plus..."

Have you figured out a good way to mount something to a bike helmet?
I have a cheap Pryme ear-bud / boom mic that I used with an HT that has a broken-off ear piece. I'm thinking of using that somehow. I'm still not sure about wires running all over the place, though.

"The antenna mounts shouldn't be a big problem but I have not decided on a rear rack...What is the "pannier" rack and where might I see a picture or two of

Try Bike Nashbar. They have some rear racks. I got mine at BGI on 86th street.

Topic: 62 Message: 65

One time on the bike I used a Pyrme/something-or-another small boom mic/earpiece for my 2m HT. I found that I had to wear the helmet (not that I am in the habit of not) in order to hold the earpiece in place. I think their was some wind noise problems too, but I did this quite a while ago. It might work well for you--I used one of those 1/4 wave rubber ducks (it was a dual band antenna too), and stuck it in the waist band of my pants, on my backside. Since I am always leaning when pedaling, the antenna cleared my body somewhat, and wasn't as detuned when operating. Then, if one falls off the bike, or during normal dismount, you and the radio go together.

Might want someway to secure the radio to yourself though--so it doesn't fall off during a good bump.

My antenna is far enough behind the bike (it's a 19" horizontal piece of PVC with twin-lead inside it and a 39" stinger mounted vertically on the end and bolted to one of the conductors of the twin-lead....in other words, a J-pole with the bottom 1/4-wave turned 90 and stuffed in PVC) that it's out of my way for dismounts. But it's a pain to hold the bike up and walk around the back of it.

> Might want someway to secure the radio to yourself though--so it doesn't
> fall off during a good bump.

I have a piece of belt hose-clamped to my handlebars over a thick piece of closed-cell foam. I hang the radio by it's belt-clip, and then use a toeclip strp to cinch it down tight on the stem (I have a high-rise stem).

67. more FT-817 Handheld DX with 2 ft $9.95 RS Antenna

Ray,

Look in Radio Shack's latest consumer catalog. they have a PTT/VOX headset/boom mike intended to be mounted on a bike helmet. It is their part number 19-321 and it sells for $24.95. I have not seen it other than the catalog picture but it looks like it is worth a trip to the "Shack" to get a closer look.

I went to BGI today and looked at some racks and panniers. Thanks!

I have that. It worked pretty well until one of the kids moved my bike around the rom without looking at the mic which was tangled in the spokes (don't ask me how - I wasn't there). I never was able to get it soldered back together right. The wires each have individual insulation anodized on or something and it just doesn't seem to work like you'd normally expect.

Well..... that doesn't make bicycle mobile look quite like so much fun. Good valid comments but I will have to try to suppress the thoughts lest it screw up my hobby :-) Just two days ago I was on the way home with a new bike.... talking to kb9hr on 442.65 and got a call on the PCS phone from my wife. Guiding a brand new, unfamilar bike with no hands really was unsettling :-)

Seriously Boyd, you have a very good point.

Hmm.. What about radio related accidents while on the bike?
Assuming the statistics concerning the use of a cell-phone while driving a car are correct, I'd have to assume the same would especially apply to the use of a radio while trying to ride a bicycle in/near any traffic..

Hmmm.... Almost thirty years of bicycle mobile ham radio operating and now I find out that it might not be quite so much fun... :-(

And statiscally, I might have gotten into an accident while talking on my radio and cycling at the same time... :-(

I guess paying a lot of attention to what I was doing and not attempting to do more things than I could handle at once has paid off for me.

73. Bone-conduction microphone/speaker; bicycle cop setups

Yahoo group: BMHA
Date: 2001-03-30 19:49:11 UTC
From: xtalradio@aol.com
Topic: 73 Message: 73

Two companies have come out with a really slick setup for bicycle cops to use with two-way radios. Savox has a bone-conduction microphone/speaker that mounts inside the helmet, with an external PTT.
Telex has a helmet-mounted microphone speaker combo called "Stinger", with remotable PTT. The Telex is completely waterproof and the Savox is water resistant.
They both are using the new standard 1/4 inch break-away connectors like you see on fire and hazmat setups.
I saw both of these at the International Wireless Communications Expo yesterday in Las Vegas.

74. FT-817 using Radio Shack Headset?

Yahoo group: BMHA
Date: 2001-04-02 14:44:09 UTC
From: w.marty.ray@delphiauto.com
Topic: 74 Message: 74

Has anyone used the RS helmet-mounted headset with the FT-817?
I tried it this weekend and had no luck getting audio into the radio.
I think the radio wants to use a dynamic mic and the RS headset mic is electret,
I think.
To make this work, I think I need to provide a bias voltage to the mic element
and also probably some amplification. Perhaps there is an easier alternative...

Any comments?

Thanks!

You may want to check which radios this headset will work with. My past experience with RS is that there was at least Yaesu radios that they would not work with. The mic and speaker connections are reversed from the other models. I know it works with Alinco, Kenwood and Icom.

I finished building my new tray for mounting my new FT-817 on my Trek 7000's handlebars Wednesday evening. I put a primer coat on yesterday morning, a coat of black paint on last night, and a second coat of black paint on this morning. I should be able to mount the thing to the handlebars tonight or tomorrow morning and then cycle over (weather permitting)to Amateur Electronic Supplies superfest thingy they have going on tomorrow to let some of the locals see what I've been working on lately.

I just put 22 older photos on a Yahoo! photopage, the most recent being from 1993 showing different aspects of what I've been doing HF bicycle mobile the past 30 years or so. Don't have anything from the real early HA-650 (2.5w 6m AM) or Drake TR-22C days, or recent times, but these should work until I put some new ones up here in the next week or so with the FT-817 in them. Some of these might be familiar from CQ Magazine, World Radio, and others over the years. I think the one that got the most press was the Black & White photo of the old Huffy with the Argonaut 509 and Icom IC-2AT mounted on it. Anyway, the accumulated total with these setups is all 50 states, 96 countries, and mucho interesting contacts, including some bicycle-to-bicycle HF QSO's.

This off of the Weather Underground. So, OK, maybe I won't peddle up to Amateur Electronic Supply Saturday....

Statement as of 3:25 pm CDT on April 6, 2001:

...High Wind Watch For Saturday...

howling southwest winds 30 to 45 mph with possible gusts 50 to 60 mph will tear through south central and southeast Wisconsin Saturday. Motorists with high profile vehicles and those traveling on east west roadways should use extreme caution...as vehicles can be pushed over by the powerful winds. Any loose outdoor objects should be tied down or stored indoors.

Guy,

I have had similar questions on bicycle mobile. 2M & 70CM is not a problem but HF/SSB requires a little thought even to just listen while in motion. The radio gear is usually behing you on a bike as well or at least I think it usually is. I have an SG-2020 ready to go on the bike soon. I only have a few dozen remaining problems :-)

Well, I now have my FT-817 mounted on my front handlebars just to the right of my communication speaker up there. The old Argonaut would have looked somewhat out of place up there, but the FT-817 goes into a new mounting bracket/tray that I built this week and then painted black to match the handlebars and it looks just fine. Pictures will be posted in the next week or so on my Yahoo! photo page showing the FT-817's placement. Frequency changes, volume, mode selection (AM, FM, LSB, USB, CW), band changes (75m-440 Mhz), etc, can all be done as is done normally, that is reach down and make the adjustment. If one does not feel safe making the adjustment while in motion, i.e., heavy traffic, roads that are pot-hole intense, or for any reason, you can stop the bike and make the change, which does not seem like a problem to me. I've sat on one HF frequency for hours working all of the stations that wanted to talk to the guy on the bike or just ragchewing with a couple of hams. Ned, WC4X or Mike, NF0N, and others can probably tell you all the number of times I used to check in on the BMHA net on 20m SSB on Sunday afternoons and I used to chat with others afterwards, all using the Argonaut mounted on the back. The new FT-817 has memories where nearly everything important can be saved in the memory location along with the frequency which to me really simplifies bicycle mobile ham radio operation.

I'm maybe not understanding the question yet, and correct me if I'm wrong, but it sounds to me like "How can I walk/cycle down the street and change stations or even listen to SSB on my radio at the same time I'm moving/walking/cycling?". In a way it's sorta like taking Drivers ED, learning how to drive, getting a new car, figuring out how the stereo is set up, how to turn the headlights/windshield wipers on, and then using it until you don't really have to think about how you do it, when the time comes, you just do it. Before, you got your drivers license, you probably were wondering how anyone can drive and tune/listen to a talk show on the car radio in rush hour traffic. Years later, it's no big deal, you just do it. It's just that once you can, you can, and if you do it for years, well, things become sorta 2nd nature. When I'm listening to SSB, for example, on 14.253 Mhz, and there's a number of stations on a net, if one ham comes on and is slghtly off frequency, you just reach down and adjust the tuning knob until he sounds clear. You don't have to look around for the knob to find it because it's in the same spot it's been in for years, or you don't even take your eyes off the road to check the frequency display, because wherever you end up, you're still only a few Hz from where you started from, not out of the band somewhere.

If all of this is brand new for you, or for example, you haven't ridden a bike since you were a kid and now you're 43 years old and you want to work 30m CW from the bike but don't know code yet and you don't have a bike yet, you're going to have to take the time to become familiar with your ham equipment and develop efficient and safe operating technique, ride the bike everyday, etc. otherwise it's definitely not fun, and you're likely to be dangerous to yourself and others. But, once you do, you'll have the time of yor life!!! When I went from the 3-speed Huffy to the 21-speed Trek 7000 I thought I wouldn't be able to operate as easily as I had become used to on the 3-speed and almost thought that I wouldn't operate HF anymore, at least from the Trek. After I got used to the way the shifting worked and how the new bike handled, it became easier and now, after having the Trek for 8 years, I don't even think about the worries I initially had.

I guarantee you, I still get into situations where you don't fool around with the radio, but you deal with the situation(s) at hand. They just had the first baseball game at Milwaukee's new Miller Park yesterday evening and had I been out cycling and hamming it up and nearby when the game let out, I would have put the mic down and concentrated on driving defensively knowing that the motor vehicle traffic is intense and people have been drinking for the past few hours, or are emotional about a big win or loss, or... Safety has to come first.

With all of that said and done, the whole bicycle mobile thing has been really fun for me. I still get excited with a new radio, new country, etc...

Guy, Mike, and others out there, when you get set up, or if you are set up now, I'd sure like to be able to set up a sked with you and give you all an HF QRP bicycle mobile contact from Wisconsin. Also, I'm taking a two week bicycle trip from Milwaukee to Northern Iowa, Southern Iowa, back across Illinois and then back into Wisconsin and I'll be leaving Saturday June 9th and should be gone for about two weeks. I'll be operating the FT-817 and FX-5R on the bicycle from campsites along the Mississippi River, from Clear Lake, Iowa, where Buddy Holly and friends played their last show, from Rosemon Bridge, the covered bridge in the book/movie "The Bridges of Madison County, from Alpine Valley, near East Troy, Wisconsin, where Stevie Ray Vaughan played his last show, from Waukesha, Wis, where Les Paul decided to mount pick-up coils on a guitar and amplify the thing.... and a lot of other places along the way. Hope to work a lot of you from these places from the bike. Looks like about a 1,000 mile trip and I hope to make sure I get back safely and in one piece!

88. Life of 12vdc, 7.2ah gel battery?

Yahoo group: BMHA
Date: 2001-04-09 00:54:31 UTC
From: Michael Blake
Topic: 88 Message: 88

I have my bicycle mobile ready to go except for the battery. My choice is a very expensive ($130) 13.2vdc, 4ah NiMH that is designed to fit into the water bottle mount on the Bike. The other choice is a very in-expensive ($25) 12 vdc, 7.2ah Gell battery which will fit into the Rack Pack along with the radio.

My concern is that most lead acid batteries do not last very long if run down repeatedly. What can I expect the lifetime of the gel battery to be? It will probably be used 2-3 times a week to power either and FT-50RD dualband HT or an SG-2020 HF SSB rig.

The manufacturers rating on the 13.2 NiMH is for a minimum of 150 recharge cycles. It was designed to power a 20watt bicycle headlight system.

From: Upton, Shawn
Topic: 88 Message: 89

If it was me...

I'd go with the RS battery. (You might find a cheaper source also.) Why? I know that lead acid's don't like to be charge/discharged the same way the NiMH, or discharged the same way (as under a load), but for the price... I'm pretty sure with the usage cycle you describe, the lead acid would go 150 charge/recharge cycles for 1/5th the cost. As long as the RS battery is rated at the max current draw of the 817, that is. Plus, I think lead acid has a much lower self discharge rate too.

The only disadvantage is the larger size and weight, and the fact that it won't fit into a water bottle cage.

Another way to look at it--even if you replace the lead acid every summer, you could go 5 years for the price of that fancy battery. By then, the situation could be a) the NiMH battery gets even cheaper or b) there would be an even better battery out there.

Here's some current WB9GIE/qrp/bicycle mobile photos on my Yahoo! photo page (the first couple of photos) showing the FT817 mounted on the handlebars. What a difference from the days of the Argonaut! The film was the last of some ASA 800 in the camera since last September so I'll be shooting some fresh ASA 100 in the next batch.

http://y42.photos.yahoo.com/bc/wb9gie/lst?.dir=/WB9GIE+Bicycle+Mobile

Last night I added all of my favorite FM broadcast stations and some public service things like Milwaukee police to the FT817memory channels. Will be adding some favorite International Broadcast stuff too. Everything's right there and easy to get at.

On the battery thing, my gel-cels would last for at least a couple of years with daily usage when used with the Argonaut and a two meter rig, and, most of the time I picked up the gel-cels at swapfests so, I didn't know their exact age/prior-usage status when I started using them.

Elroy,

Very nice installation and pictures. Where is the 75M Bugcatcher :-) ?

I am ready to go on 2M & 70CM (FT-50 & Larsen DualBand) and have already made several nice local contacts. The SG-2020 is still waiting on juice. I would like to avoid the weight of two 12vdc 7ah Gels but that will be the cheapest way to go. They are $19.95 apiece at the local HobbyTown USA here in Indianapolis.

My latest plan is to put the 2 in series and then feed the 24vdc into a single 2N3055 series regulator with a 7815 providing the reference voltage. that should give me 14.4 vdc all the way down to battery exhaust. I will probably mount it on a small piece of 2.5" x 1/8" aluminum and bolt it to the rear rack bracket that connects the rack to the braze-ons or put it on the antenna mount bracket itself (that will be clear if you look at the pictures. If I pot the connection side in epoxy or silicon calk it should be okay. Heat should not be a problem out in the open like that.

You can see some pictures of at this site:

http://www.realham.gen.in.us/

Look under pictures of the week for both the April 7 & April 9 dates. Whaddayathink?

Great to see all the photos and discussion of various setups! Elroy's
FT-817 sure looks like it belongs on the bike.

The evolution of my own hf installation is:

- Index Labs QRP+ on trusty old CCM bike
http://www.geocities.com/ve3jc/bikemobile.html
- Elecraft K2 in handlebar bag on CCM
http://www.geocities.com/ve3jc/k2bike.htm
- and if anyone thinks you can't handlebar-mount a rig on a bike with
front shocks, my Gary Fisher Big Sur with Elecraft K2, that'll go
anywhere (except where there's a lot of overgrowth to interfere with the
antenna!):

Your antenna mounts look just fine, Mike! Nice looking Indianapolis-a rea "Real-Hams" web page, too! I'm workingf on bicycle/ham radio web page too, hopefully to be up and running by May 1st.

Thanks for the nice comments on the new photos. Actually, I take 75m & 40m Hustler resonator coils with me on my long trips. They allow me to talk back home to Milwaukee from campgrounds within a couple hundred miles from home, but I don't like that size antenna coil while in motion. OK, 40m SSB is sorta fun in motion, but, as far as most of the time in the city it just attracts too much attention! I feel much more comfortable with coils for 20m and up. In the current photos you see my 2m J-pole which is my primary antenna on my trips as I like talking to the locals in the areas I'm unfamiliar with. Get a chance for a lot of friendly eyeball contacts that way too! But, if I'm bored or in an area with low activity I'll get on 20m, 15m, or 10m SSB, at least I did in the old days, now I can get on 30m CW, 17m, 12m, 6m SSB & FM, 2m SSB & FM, and 432 SSB & 440 FM too! I still can't believe I have all of that ability thanks to the new Yaesu FT-817! I also have an VX-5R for the bike too.

I've had the bigger brick-size (7amp-12v) gel-cels on my bike for years and also two 4amps in parallel at times, but, this time on my Iowa trip I'm thinking of using some smaller 1.2 amp gel-cels stuffed inside water bottles in my bottle mounts. I also have a D-cell battery holder from back in the early 70's which I think I'll take along "empty" and if I can't get my re-chargeables charged for some reason on the trip then I can pop in some alkaline D's and be ready for some serious operating under emergency "back-up" power supply conditions and then toss them after I get the rechargeables replenished. Currently, for the FT-817, I use 8 MAHA AA NiMH rechargeable batteries inside the rig which I pop out and re-charge in a MAHA MH-C204F Smart Charger and for the amount of operating I do going to and from work and during a 1 hour lunch every day, I've never had them run down yet. So, I've gotten by without dragging any extra batteries of any type with me. By the way, $19.95 sounds like a pretty good price for the 12v-7amp batteries. I'm not familiar with the SG-2020's current/voltage needs, but, your plan sounds like it would provide a good constant 14 volts for the rig.

I noticed in the current issues of CQ and QST that they mention that the submarine U.S.S. Cobia, parked on Lake Michigan at Manitowoc, WI, will be have a special event station going the last weekend of April. You might want to rig up something with your SG-2020 for one of those elusive "bicycle-to-submarine" HF contacts! I worked the U.S.S. Silversides parked in Muskegon, MI as a special events station a few years back from the old 3-speed Huffy on 40m SSB with the Argonaut

and got a nice certificate for that. I also worked the U.S.S. Enterprise out in the Atlantic somewhere on 20m but that's another story...

Thanks again for the nice comments, Mike.

John, that mini-paddle setup is awesome! I might need to borrow that idea for my setup, as I don't really have a good CW setup, but, the FT817 is capable and has a built-in keyer too. I also, have the optional CW filter already installed. And thanks for the idea for the speaker deflector. I just held up a piece of plastic in front of the FT817 speaker and the deflector concept works better than one can imagine, almost like an audio illusion! If you don't mind I think I'll borrow that idea too! That'll free up my speaker next to the FT817 for the audio from the VX-5R to come out from!

Thanks!

97. FYI - Adventure Radio Society

Yahoo group: BMHA
Date: 2001-04-11 00:48:10 UTC
From: jbcumming@wwdc.com
Topic: 97 Message: 97

For BMHA members, the Adventure Radio Society is another super source of information and inspiration. Bicycle mobiling fits very nicely in ARS's philosophy: "ARS promotes a sense of adventure by supporting radio operation from beautiful and remarkable places. We sponsor events that encourage the use of human-powered travel, in its myriad forms, to reach outdoor operating sites. We support the development of imaginative equipment and antennas"
If you would like to see a 1935 handlebar-mounted broadcast radio receiver, there is a link from the following ARS Sojourner article http://www.natworld.com/ars/pages/back_issues/1999_text/0299_text/1935.html (Links at the bottom of the article will lead you to other ARS information, including articles on bicycle camping trips.
Of course, in 1935 WB9NUF was already active bicycle mobile on the 5 meter band (for that picture, you'll have to acquire back issues of the BMHA newsletter!). Speaking of which, the latest newsletter is another fb job, Scott!

73, John VE3JC

98. New FT-817'er

Yahoo group: BMHA
Date: 2001-04-11 01:08:34 UTC
From: Mike Nickolaus
Topic: 98 Message: 98

Hello to the group. I just put in my order for the FT-817 today and looking forward to receiving it later this week. I hope to mount it on my Lightning P-38 Recumbent. I have been watching all of the discussion on this group and the HFPack group and am seeing lot's of ideas for it already. Elroy, I'll be watching your notes as you have the most experience on doing this.

I am also working the second time around for All Counties and hope to eventually give out a few counties on the net on 14.336. They have 18 wheelers giving out the counties, so why not a bicycle mobile ! We just won't go through as many counties in a day as an 18 wheeler.

I also want to put in a plug for the Dayton HamVention Forum on May 20. It is in room #2. I hope to also do the Dayton Hamvention BMHA bike ride on the 19th. Hope many of you can make it and I look forward to meeting many of you there. See the latest BMHA Newsletter that is just about to be mailed, for all the details. See the BMHA website for details also.

Mike, good to hear from you again! It was nice to meet you in person at my BMHA presentation at Dayton back in 1994 and on the Argonaut all of the times I checked in to the BMHA 20m SSB net on Sunday afternoons when you were net control.

I believe you will be very pleased with your new FT817 when you get it! I can hardly believe that such a radio exists for bicycle mobile use! There's a Yahoo! group for FT817 users that you might already know about, but, if you don't, here's the web address:

http://groups.yahoo.com/group/FT817

It's a really great source of info on the rig and there's plenty of people in the group to answer any questions you might have from their personal point of view on the rig, options, third party antennas & accessories, etc. Between the FT817, HFpack and BMHA groups, almost any piece of portable/bicycle/etc info can be had and new ideas traded.

I notice Ned Mountain, WC4X, is giving a presentation for BMHA at this year's Dayton Hamfest. I won't be able to make this years hamfest but I would really appreciate it if you say Hi to Ned for me, Mike. I remember it was such a thrill to work him bicycle-to-bicycle from Wisconsin to Georgia, qrp at both ends, the first time back in the early 1990's! We had a couple of interesting people listening in at both ends too, like the ARRL Section Manager for Wisconsin back then, and, Doug Ingram, K4TWJ, who has "The World of New Ideas" column in CQ Magazine. I think everyone got a big kick out of it at the time, and it is still one of my favorite moments in ham radio. Maybe you can get Ned to talk about his multiple band HF antenna he came up with as I think it is one of the coolest bicycle ham radio ideas ever.

Mike, if you guys want to try a sked with a bicycle station from Wisconsin for your Dayton rides, just let me know. I think it will be great fun trying! With all of the solar flares and high sunspot numbers almost anything could happen. We just might pull it off via aurora on 2m SSB!!!

Anyway, good to hear from you again, Mike.

Topic: 76 Message: 100

Does the SG-2020 really need rock steady 12.5V or more? Seems to me that you would be burning off lots of power by this scheme. As in, it'd be better to make your own NiCAD or alkaline pack using enough batteries to get 14V instead, and not regulate this.

Side note: My Century 21 has an internal power supply; it steps the 120 down toabout 23V, and then uses a pass 2n3055 to generate 12.5V. At 50W or so out, the metal around the transistor gets very warm, while the heatsink on the final does not even start to warm! Talk about lost power. I know that you won't be operating at 50W output, but I mentioned it as a side note.

Anyhow, back to your problem. Are you sure that you need that 12.5V? Can the SG-2020 run on 11V? Or can it be modified for stable operation on 11V? (I say this because a lead acid, if I'm not mistaken, is about dead when it gets to 11V.)

Too bad one can't get into the frame of the bike; I'd suspect one could pack in a bunch of C-sized batteries. Maybe down the tube that the seat post goes into?

Dont forget to isolate the regulator from the pass transistor--the 7815 is a grounded case, if I'm not mistaken, but the 2n3055 has the collector tied to the case. And I think the 7815 will need ceramic bypass caps, or at least I would add 'em (certainly easier to do before adding epoxy/caulk!).

Elroy,

Very nice installation and pictures. Where is the 75M Bugcatcher :-) ?

I am ready to go on 2M & 70CM (FT-50 & Larsen DualBand) and have already made several nice local contacts. The SG-2020 is still waiting on juice. I would like to avoid the weight of two 12vdc 7ah Gels but that will be the cheapest way to go. They are $19.95 apiece at the local HobbyTown USA here in Indianapolis.

My latest plan is to put the 2 in series and then feed the 24vdc into a single 2N3055 series regulator with a 7815 providing the reference voltage. that should give me 14.4 vdc all the way down to battery exhaust. I will probably mount it on a small piece of 2.5" x 1/8" aluminum and bolt it to the rear rack bracket that connects the rack to the braze-ons or put it on the antenna mount bracket itself (that will be clear if you look at the pictures. If I pot the connection side in epoxy or silicon calk it should be okay. Heat should not be a problem out in the open like that.

You can see some pictures of at this site:

http://www.realham.gen.in.us/

Look under pictures of the week for both the April 7 & April 9 dates. Whaddayathink?

Shawn,

Several people have commented about the "wasted" power when the real issue is cost. The pair of 12vdc SLAs will cost $40.00 and I already have the regulator parts. Also 2 SLAs will charge quite easily as you merely float them at the proper voltage.

The big "down side" is the heat and risk of regulator failure. At peak current it will be 50 watts even though it will be for very limited periods of time. Since the entire operation is out in open air and the bike has a rather large metal mass I think the heat can be handled. The prospect of regulator failure can also be addressed with a simple fuse/crowbar circuit.

The down side to the NiMH solution is that 1.2vdc 8ah NiMH cells cost $17.00 each. That makes a pack of 12 VERY expensive as well as difficult to charge with chargers I have available (Maha Universal stops at 10 cell packs).

Of all the suggestions I have received the one that is starting to make the most sense is the 12vdc, 7ah SLA and one 2vdc SLA or two 1.2vdc, 8ah NiMh in series. Both would be easy to charge and no electronics would be involved. Either the 2vdc SLA cell or the 8ah NiMHs will cost more than the second 12vdc, 7ah SLA though.

Mike - K9JRI writes:

> Does the SG-2020 really need rock steady 12.5V or more?

The "safe" range of the SG-2020 is 10.8V to 17.9V.
The optimum is either 7 lead acid cells or 12 NiCad cells.
For "gel cell" batteries, that means a 6V and a 4V pack in series.

12V 7Ah gel cell (6 lead acid cells) will be useful on the SG-2020 for only about half the rated battery capacity (3 or 4Ah). It will also be prone to microprocessor glitch reset problems. However, 7 lead acid cells at 7Ah will provide full 7Ah capacity, and may be utilized effectively down to 1.6V/cell.

Elroy,

Nice pictures! I was a little bit surprised that you were sitting on the seat and still able to "flat foot" both feet. What is the frame size?

My installation is still in process but the VHF/UHF installation is close to complete and the HF rig is about ready. Still haven't made up my mind on power source.... decisions take me a while :-)

Pictures are under "Pictures of the week" on this web page:

Thanks Mike, but I'm not flat footing it in the picture at all but it sure looks like that! I was actually on spongy moist ground on a little bit of a slope, with one foot inside the peddle cage thingy and the other foot tippy-toed to the ground wih the bike sinking in to the ground a bit! The guy with the camera is also on the side of the hill looking down somewhat at me. You're right though, when you add all of that up and look at the photo, it almost looks like i'm on something much smaller.

The frame is actually large (22" frame, 26" tires) and when standing next to the bike on asphalt the top of the seat is just about at the bottom of my belt.

Hope to work you soon, Mike!

107. SG-2020 at 10.5vdc

Yahoo group: BMHA
Date: 2001-04-15 14:07:17 UTC
From: Michael Blake
Topic: 107 Message: 107

I have been running my SG-2020 on an adjustable regulated supply, at 10vdc, for a couple of days now with no adverse events other than low output power (10 watts). The point at which the regulators seem to drop out on my version 1.07, SG-2020 is about 10.2 vdc. At that point the frequency starts to change as the voltage changes but everything else seems to be stable until about 9.9vdc.

I have received a great many comments from the group on how to power the 2020 on my bike. I really appreciate all of them as they were all very thought provoking. As I am quite new to this type of operation cost was very important as I might make only a handfull of contacts before I drive the bike off a cliff (due to inattention :-)..... To that point, is HF operation while underway feasible or is it normally accomplished while stationary so that a counterpoise can be deployed?

I have decided on my starting point:

One 12vdc, 7ah, SLA ($19.95 at HobbyTown USA) with two D cells in series when I want to run more power. Duracel Ds appear to be rated at about 14ah so that should be a reasonable initial solution from a cost/dB perspective.

Many thanks to all of you for your thoughts and approaches to the problem. I should be on the air for next weekends schedules.

109. Easter Sunday

Yahoo group: BMHA
Date: 2001-04-16 16:53:32 UTC
From: WB9GIE@webtv.net
Topic: 109 Message: 109

I cycled out to my parent's place in Brookfield, WI, just west of Milwaukee, in the next county for a family get-together on Easter Sunday and I worked Bob, W6PU, near Springer, New Mexico, from the bicycle on 20m USB just before noontime. He was at an elevation a little over 6,000 ft. and it sounded like he was really thrilled to work an HF bicycle mobile. It was a genuine 1/2 hour rag-chewing QSO, no QRM problems at either end. MY FT817's 2.5 watts using it's internal rechargeable AA batteries sounded good from Bob's report and his signal was well over S9 throughout the whole contact.

You're very welcome, Mike, and good luck. Hope you don't have to deal with solar flares, etc... It's a little too short a distance between us so we probably can't work each other, but, you should be able to get some pretty good DX on ten. You may know this but traditionally May, June, and July are the peak months for Sporadic E (Es) ionospheric propagation (typical distances are 700 to 1200 miles)and as the Es MUF rises the skip distance on lower bands shortens, i.e., if the 10m band was open from Indiana to Colorado and all of a sudden you start to hear Western Illinois in Indiana on 10m Es skip you have a fairly good chance of catching an ionosperic Es opening on the lower TV channels (2-6), FM Broadcast Band, and even 2m and 220 Mhz. Es is a fairly intense propagation mode and I used to work all over the country with 2.5 watts AM on 6m with an old Lafayette 650 back in the 70's when I was most active on that band (not from the bike though). Anyway, keep an eye on 2m simplex if the skip shortens drastically on 10m, you may make a rare distant contact on 2m also. With my new FT817 I plan on keeping an eye on both 10m & 6m SSB from the bike. I've never had 6m SSB on the bike before....

116. First contact with new Bike mobile

Yahoo group: BMHA
Date: 2001-04-20 18:40:48 UTC
From: Michael Blake
Topic: 116 Message: 116

I made my first HF SSB bike mobile contact at 1730Z today. The station was a local about 7 miles away and neither he nor I heard any other signals.

The contact was with WB9FAD, George, on 28.337 mHz. Signals were very good in both directions and unlike my other mobile this one did not have any alternator noise :-) George could hear me breathing hard though.

I was in motion for the complete contact amd I must say it was a "blast"! The handlebar mount for the SG-2020 turned out to be much simpler than I had thought and absolutely rock solid. I will post pictures in a day or two.

I plan to be on at about 1700Z tomorrow and Sunday. Please look for me on 28.337 mHz.

73 - Mike - K9JRI

If you can work the locals a couple of miles away on 10m you're guaranteed to work the world from your bike when the band opens.

Congratulations Mike!!!

118. Worked IY4W from Bike Mobile

Yahoo group: BMHA
Date: 2001-04-21 19:09:27 UTC
From: Michael Blake
Topic: 118 Message: 118

While showing off the new bicycle installation to Tom, KB9HR, we were able to work IY4W in Bologna, Italy. He was quite surprised and said that this was his first bike mobile contact :-)

It was a real treat as he is a Marconi Wireless special event station and we were competing with a pile-up on 10 meters. The time was approximately 1815z, 4/21/2001 on about 28.440mHz.

This is really fun!!!!

119. Radio on Frame or Handlebars?

Yahoo group: BMHA
Date: 2001-04-22 22:08:13 UTC
From: Michael Blake
Topic: 119 Message: 119

Take a peek at the April 22nd, picture of the week on the following web site:

http://www.realham.gen.in.us/

I have been riding with the radio (SG-2020) mounted on the bars since Thursday evening and have not had any problems. It occurred to me that steering response might be better, quicker, safer..... if the radio were mounted on the cross bar right behing the stem. That would get the mass (4lb.) off of the bars.

Any thoughts?

122. Re: [BMHA] Radio on Frame or Handlebars?

Hi Michael,
There are several things that would not appeal to me about mounting the rig on the cross bar - first, it might reduce your visibility of lcd display, knob positions, etc. I would be concerned that, in looking down to adjust the rig, your attention would be distracted from the road ahead. Secondly, it might interfere with your knees!
I don't have the specs at hand, but I expect the 2020 is abt the same weight as my K2 with internal gel cel. If you look at how the K2 is mounted on my bike, it is actually cantilevered IN FRONT OF the handlebars. This gives me full visibility of display and knobs "in line" with my view of the road, and allows audio to be deflected from top-mount speaker, so that I don't need earphones. The further-forward, lower centre of gravity (as opposed to mounting the rig on top of the handlebars) nicely counterbalances the weight of my antenna, which is located well behind the rear wheel.
Since I usually carry a 7 AHr cell in my pannier, or a "water bottle" battery, my initial intent was to remove the internal battery from the K2 (without the battery, the K2 is light as a feather!). However, I have found that the weight of the rig with battery has minimal effect on steering control.

Just my two cents (which, when converted from $US to $Canadian, amounts to about a red cent!)

Thanks for the comments John. My 2020 is mounted ahead of the bars and drops down in front as well and the 7ahr SLA is in the rear in the rack bag. They both weigh about the same (4.5 lbs.).

I had no sense of a problem until encountering the rough spot at a very slow speed. I was trying to get all the way to the side of our street so that the Church crowd didn't run over me. A Honda Acord had just tried :-) When I hit the rough spot I got very wobbly and the handlebars seemed like they weighed a ton. To be honest it scared me a bit. The best way to describe the situation is to imaging the first few times you rode a bike and were pulling the bars one way and then the other trying to attain balance. If I could have gained speed I would have been okay but I was just stuck in that kind of situation until I could get my left foot out of the clips and onto the ground.

When I got home I took the radio off of the mount and practiced some really slow (almost stopped) balancing tricks and then did the same with the radio mounted. It was quite apparent that the weight on the bars was having a bad effect on my ability to control the bike.

I am going to attempt to remote the tuning dial and just put the 2020 into the rack bag along with the SLA. They will both fit fine. It is quite likely that the event has clouded my judgement on the effects of the high/heavy weight on the bars. Further comments from you would be appreciated.

Does it sound to you like I may be over reacting to the issue???

Michael, I haven't had any problems with my rig, the MFJ Cub :>) but I would think that if you had the center of gravity of your equipment mounted over the stem it would'nt make a great deal of difference in the speed of steering. The farther away from the pivot point of the handle bars the more the leverage of the weight mass. Remember riding kids on the handlebars? Not too much of a problem that I remember. I agree with john, the rig needs to be up where you can see it.
At any rate you've given me something to think about if I go to a heavier rig and battery.

Hi Mike,
No you are not.....I had once upset at a railroad crossing....the tracks ran at a little steeper angle than usual on this crossing and I was going to cross it on a slow crowling speed to avoid the bumping feeling but my front wheel got into the track grooves... I was lucky that I was only half down because of my low recumbent bike but even than my leg gave way and I was down on the road, just about the same distance from the curb as when I first stated to cross.....I was even more darned lucky that there was no vehicles coming on the highway at that time.....so ever since that incident I always dismount at the rairoad crossings.....no-matter-what.
Its wise to be safe...life is very precious.

mike

anytime you put weight on the handlebars it iwill affect the
handleing of the bike get a low rider rack on put the radio in that
or place it on the rack in the rear of the bike good luck

Topic: 127 Message: 127

I have a Hustler mobile antenna mounted on my bike. (Picture in files on this group) Would a loading coil fastened to the ground side of the antenna have any effect on antenna tuning? I was worried there was not enough metal mass to the bike to allow use of the mobile antenna, however I have made several U.S. contacts under bad band conditions. I notice no difference on receive with or without coil. Coil was made by winding 1/4 wave of wire onto a pvc tube and one end of wire fastened to antenna mount bolt.

Hi, just finished reading thru the back messages. Some of you guys are really adventureous! I haven't been on my bike in a while, but I ride a Rans Nimbus long wheelbase recumbent. I generally have carried my 2M HT with me on my rides for emergency use only. However, I'm thinking I may want to add HF to the rig. I'm going to the TenTec plant in July, and I'll be looking at their Scout transceiver. As I understand it, it's pretty compact and very easy to operate. I'd appreciate any thoughts any of you might have on this rig.
Since my recumbent has a very large bag in front, it becomes the natural location for the radio. And sice I always ride with a flag so that I can be seen, I guess I can just change the flag pole from noradiating to one that radiates! I'm looking forward to this summer.

Lucky you! I'd love to go to the TenTec plant someday; but it's not exactly a day trip.

What is the advantage to a recumbent bike vs traditional type? If it's the design I'm thinking of (legs more parallel to group vs perpendicular for regular bike), I would think that you would not have as much going for you when doing hill climbs (which are not a trivial matter here in NH).

For hamming, I'd think that a 'bent would be better because since you're not supporting your weight on your arms, playing with the mic/radio would be easier. As far as teh hillclimbs, yes, you have to gear down more and spin faster, but you can more than make up for it on the downhills where teh aerodynamicscome into play :)

131. Hams help 9000 bicyclists

Yahoo group: BMHA
Date: 2001-04-25 16:53:28 UTC
From: Peter Wang
Topic: 131 Message: 131

Last weekend, April 21 - 22 2001, 9000 bicyclists rode from Houston to Austin, Texas, on the two day, 180 mile Multiple Sclerosis Society fundraiser, or MS150.

They were supported by a crew of more than 75 hams from communities all over Texas, utilizing multiple VHF repeaters, HF communication backbone, APRS, to provide communications for the event as it wound it's way through Texas.

Hams were posted in ambulances, mobile medical roving SUVs, police vehicles, sag vans, rest stops, and command centers.

A tremendous amount of Emergency, Priority, and Routine traffic was handled, including traffic related to a fall which resulted in a critical brain injury. APRS provided exact accident scene coordinates for the Critical Air helicopter, which shaved valuable minutes off of the response time. The victim is now recovering in a Houston hospital. Other emergency traffic included many less severe head & neck injuries, broken collarbones, dislocated shoulders, road rash, bruises, dehydration, eye injuries, asthma attacks, and police incidents.

MS150 2002 will be the third weekend of April, 2002. We would love to have you come out to support this massive and important ride with us next year. Please contact me for more information.

(PLEASE CONSIDER THIS POSTING FOR THE BMHA PRINTED NEWSLETTER. Thank you)

73,
Pete KF5ND

Unlike with an antenna, the coil won't do much. What you (we) are lacking is ground plane, and there just isn't much with a bike. My recumbent is bigger than many bikes, and I use either hustlers or sometimes a hamstick. Works, and that's all that really matters. Would it work better with more ground plane. Sure. Do I want to haul around any. Not really.

Mohan,

Mohan,

After reviewing the situation with a couple of local bikers I have concluded that the big culprit was "Pilot Error" rather than the 5 lbs. on the top of the bars. Seems like I should have applied power rather than removing power when I got in trouble and I would have probably not gotten into the situation where the bars were turning several degrees in each direction.

After a couple of refresher lessons I am back in the "mobile" saddle. I heard Bud, W3FF, very briefly and weakly this afternoon on 18.157. No contact though.

A friend came over today and took some 35mm pictures of me and the bike mobile today. I should get the film back this evening and will scan some pictures for "show and tell". Photography is another hobby :-)

Thanks again for all your help. Now to select an all band antenna.

136. HF SSB bike mobile antenna choices?

Yahoo group: BMHA
Date: 2001-04-25 20:33:30 UTC
From: Michael Blake
Topic: 136 Message: 136

Now for the all band antenna. Some obvious choices are the:

Outbacker StealthPlus
ATX Walkabout with 3/8 x 24 threaded mount
Hustlers with short mast
Hamsticks (too long in my opinion)
Existing 66" stainless 10M antenna with an autotuner (20 through 10 meters)

My antenna mount will accommodate either the PL-259 or the 3/8 x 24 thread mounting systems. What are your ideas, inputs and suggestions. The antenna must only be able to handle the power of my SG-2020 while screaming wildly at passing cars.

This is an update on a couple of items that may be of interest to
bicycle mobile qrp
operators:

1. The 2001 QRPedal-expedition to Dayton ("FDIM or Bust!")

Ken VE3ELA, Russ KB8U, and I are getting very excited about our
upcoming ride to Dayton. Starting on the saturday before Dayton, we
will cycle across Southern
Ontario, invade the US via the Sunday evening Lake Erie ferry
(Leamington, Ontario > Sandusky, Ohio) and arrive in Dayton QRP-central
the day before
FDIM.
We will certainly hope to have the chance to work
many of you from the road, or from the evening campsite, or even from
the ferry! And of course we look forward to seeing everyone at FDIM and
at the Sunday BMHA forum. For more details on our plans (and for QSL
info, thanks to QRP-ARCI) see http://www.geocities.com/ve3jc/fdimor.htm

2. Email reflector for Bicycle Mobile Hams!

The BMHA discussion list on yahoogroups has had a lot of
interesting discussion regarding antennas, rig mounting, hf operation,
etc., so you should certainly
subscribe if you are interested in bicycle mobiling. Info can be found
at the BMHA website (http://www.lafetra.com/bmha/)

I can tell you some of the advantages that I've found with my recumbent. I ride a Bike E which is a long wheel base recumbent. The recumbent takes a lot of the stress off of your hands, neck and shoulders. If you have problems with carpel tunnel syndrome or any kind of neck problems it's great. I've have whiplash four times. It's left me with disc degeneration and a pinched nerve in my neck. As a result I can only ride my mountain bike for 45 min. to 1 hour before I have neck and shoulder pain and sometimes a migrane headache. My recumbent I can ride without any of those problems. It does take more leg strength though because you can't use your body weight to help. This can make hill climbing a little harder but I haven't found it that much harder only slower. Of course we don't have any mountains in Ohio.

Topic: 142 Message: 142

Ahhhhh, being laid back is such a great ride. I ride a Rans V-rex, and after Dayton, a V-rex with an hf antenna. Hope to pick up an ft817 + extras.

You're right, hill's are not the best on a bent but gliding down the other side is great. Plus we can enjoy all the scenery. ;~)

You're absolutely right; uphills are tougher on a recumbent. But the flats are nice, and the downhills are screaming! Seriously, you do have to develop a new set of muscles for climbing since you really aren't able to use your body weight as you do on an upright. And most recumbents are somewhat slower uphill (short wheelbases can be different), but they make up for that difference once you crest the top.

BMHA@yahoogroups.com wrote:
> Lucky you! I'd love to go to the TenTec plant someday; but it's not exactly a day trip.

What is the advantage to a recumbent bike vs traditional type? If it's the design I'm thinking of (legs more parallel to group vs perpendicular for regular bike), I would think that you would not have as much going for you when doing hill climbs (which are not a trivial matter here in NH).

Hi, just finished reading thru the back messages. Some of you guys are really adventureous! I haven't been on my bike in a while, but I ride a Rans Nimbus long wheelbase recumbent. I generally have carried my 2M HT with me on my rides for emergency use only. However, I'm thinking I may want to add HF to the rig. I'm going to the TenTec plant in July, and I'll be looking at their Scout transceiver. As I understand it, it's pretty compact and very easy to operate. I'd appreciate any thoughts any of you might have on this rig.
Since my recumbent has a very large bag in front, it becomes the natural location for the radio. And sice I always ride with a flag so that I can be seen, I guess I can just change the flag pole from noradiating to one that radiates! I'm looking forward to this summer.

how qre you using the autotuner (LDG?)? I tried that with my van and it seemed to be searching all the time (I have three of them in the home station and love them).
Just curious.
mike

"Michael Blake" <m.b.blake@worldnet.att.net> wrote:
Now for the all band antenna. Some obvious choices are the:

Outbacker StealthPlus
ATX Walkabout with 3/8 x 24 threaded mount
Hustlers with short mast
Hamsticks (too long in my opinion)
Existing 66" stainless 10M antenna with an autotuner (20 through 10 meters)

My antenna mount will accommodate either the PL-259 or the 3/8 x 24 thread mounting systems. What are your ideas, inputs and suggestions. The antenna must only be able to handle the power of my SG-2020 while screaming wildly at passing cars.

I've been there and back. I rode a Vision recumbent for 5 years/20K miles (and often operated 2m from it). However I left recumbent-land a few years ago. Why? Couple of reasons.... First, I missed the speed. I rode a nice lightweight Cannondale road bike previously. Very stiff. Very light. I love hills. Despite developing those "new set of muscles" needed for recumbent climbing, it was always a good bit slower on the hills. I tried both short and long wheelbase and it didn't make much difference. The fact you can't adjust your riding position like on an upright means you sit there and spin and spin and spin. And I didn't find the recumbent significantly faster on the downhill. Over the course of 5K miles, the Vision averaged 2-3mph slower than the Cannondale.

The second reason I left recumbentcy was safety. I had two dramatic front tire blow-outs at high speed. I never had one in over 50K miles of upright riding. It was nice being lower to the ground so they weren't so much falls as slides and didn't get hurt other than some road rash however the blow-outs were due to low quality tires. The small tire size on most recumbent front wheels means you're using rather specialized, low-volume tires. I tried a number of brands and was never happy with any.

There are things I miss about the recumbent. You can't beat the view. Sitting back is a lot nicer than leaning over. Don't wear loose-fitting shorts however. There's nothing like a bee up the old shorts for excitment.... And, it solved any shoulder/neck pain problems.

147. Possible feature on "Surfin"

Yahoo group: BMHA
Date: 2001-04-28 18:15:49 UTC
From: Skip_LaFetra@hp.com
Topic: 147 Message: 147

Fellow BMHAers:

I received the following mail last week:

=====
Hello BMHA-Webmaster,

I write a weekly on-line column for the ARRL Web site that discusses
Web sites that are related to Amateur Radio. The column is
called "Surfin'" and I would like to feature the Bicycle Mobile Hams
of America Web site in the next installment of my column.

The ARRL requires that I obtain your permission to use screen shots
of the Bicycle Mobile Hams of America Web site, so may I have your
permission?

73,

Stan Horzepa, WA1LOU
=====
Of course, I said "yes"!

To put the website in proper shape, I've also updated the newsletter
page (at http://www.lafetra.com/BMHA/Backissues/Newsletters.htm) with
an introduction to the (missing) past two newsletters.

Absolutely cool to find this Yahoo! Group... I'm a ham with a RANS Rocket 'bent bike and I've occasionally done APRS from my bike using my Garmin eTrex Summit GPS receiver and Kenwood TH-G7A HT. My wife was able to follow my progress by going to the APRS website

I really like recumbents. Last year I started riding again (first time in about 5 years) for exercise and did about 500 miles in six months on a "wedgie". I bought my Rocket in late December, and have been able to do 200 miles so far this year despite snow and ice! Last Friday I did my first 50K ride, something I never would have been able to accomplish on a traditional upright bike due to hand numbness and back pain. My goal for the year is 1000 miles, although I'd like to really get up to at least 1500 miles. The best part of riding my 'bent is being able to pass those packs of lycra-clad cyclists who used to zip by me!

152. Bike-In-Motion-Qrp

Yahoo group: BMHA
Date: 2001-05-01 06:43:33 UTC
From: ve7fm@hotmail.com
Topic: 152 Message: 152

A very windy day on Oceanside Hwy 19A on Vancouver Island....almost
got airborne couple of times on my recumbent bike...decided to pull
out and sit behind some driftwood on the beach ...tried to degipeat
aprs tracker via the ISS -- International Space Station -- on two
successive orbits but no luck and to make it worse, it started to
drizzle off and on ....time to bring out the garbage bags.....my
small golf umbrella could hardly stand against the wind...nothing was
working..... time to attack the energy bars sand wiches and
banana .... read magzine for coulple of hours....rain stopped and
almost time to move on...remove the garbage bags...twiddle the knobs
one more time...(old habit or call it that I am programmed that way
since when...lets not go there) ... 10, 12 ,15 meters NOTHING there
not a signal....
18 MHz.. like MAGIC...dx-wall-to-wall..."LET US GO ON THE HWY" ....
I didn't say that my bike did........

Bike-In-Motion-Qrp on May1st / 2001 worked:

LA2PC / Ola in Oslo 0046z 157.400Mhz sent59 rcvd55
IZ8DEP / Alfred in Napoli 0120z 18.145MHz sent57 rcvd53
N6ZI / Al in San Diego 0150z 18.147MHz sent 59 rcvd54
UA9UDX / Nick in western Siberia 0201z 18.146MHz sent55 rcvd52
RX9FM / Vlad in Perm City 0209z 18.150MHz sent59+ rcvd51
A41LZ / Murtadha in Oman 0303z 18.125MHz sent57 rcvd52

Also tried many times to contact A41KJ / Siddiq on 18,133MHz but the
pile-ups were no match for qrp....I was almost sure of ZL3GS / Grahm
in Christchurch but he decided to pick w8vm
instead...o,well ....anyway....it was time to go home

From: nedmt@mindspring.com
Topic: 98 Message: 156

Hello gang!
I'm looking forward to Dayton this year. Elroy and others are plowing new ground with the FT817 and it seems more are getting interested in HF from the bike. I will bring along to Dayton the construction details on my "poor mans outbacker" all band HF antenna which anybody can make!

My current set up is the K2 with the above mentioned antenna. I think John VE3JC and I hold the first HF bike to bike K2 to K2 contact and Elroy (Wb9GIE) and I claim the first HF bike to bike contact several years ago. It looks like our forum at Dayton this year will be loaded with practical HF bicycle mobile tips from several experiences sources.

Great to see this group and all of the activity. I will help any way I can.

157. Bike-In-Motion-Qrp / NA1SS

Yahoo group: BMHA
Date: 2001-05-05 00:03:05 UTC
From: ve7fm@hotmail.com
Topic: 157 Message: 157

Bike-In-Motion-Qrp made its first ever contact with astronaut Susan Helms / NA1SS on Orbit 14031 at 2112 UTC May4/2001 using TH-D7A handheld with 5 watt to half wave 144 MHz. vertical.

I was all set to send an aprs-email via ISS instead I was surprized to hear Susan calling qrz on the 145.800 downlink.....a quick fumbling push to another already preset split memory with 144.490 phone uplink and I was able to contact Susan after couple of transmissions....also I heard dozen or so other Canadian & US stations making phone contacts on that pass with the international space station.

mohan ve7fm / qrp .

Well, Michael, I wouldn't exactly write off your 1 watt contact with Australia as not being DX... :-)

The members of this group are definitely not the type to get their thrills by running a 2kw amp on 20m. Makes me feel good I'm hanging out on the Internet with the right people!

162. Bike-QRP-Expedition underway!

Yahoo group: BMHA
Date: 2001-05-12 15:23:05 UTC
From: VE3JC - John C
Topic: 162 Message: 162

KB8U, VE3ELA and VE3JC are on the road to Dayton. Please listen for us
on the usual QRP frequencies. Watch especially for
KB8U on 20 meters (around 14.060)
VE3ELA on 10,15,20, and 40
VE3JC near 10.106 cw, 18.140 ssb plus other ssb and cw qrp frequencies

If you work us, qsl via QRP-ARCI, and post to the list to let others
know where we are!

See everyone in Dayton!

163. BMHA

Yahoo group: BMHA
Date: 2001-05-13 14:22:55 UTC
From: ka1ttg@aol.com
Topic: 163 Message: 163

Hello to list members.
I'd like to introduce myself. My name is Bob Ankenbauer, KA1TTG and I am a Police Officer in Somerville Massachusetts.
I have been a police officer for 16 years and a bicycle patrol officer for the last three years. I have held my Tech License since 1989. We ride year round, (hurricanes and blizzards excluded) and my average day is 10 - 20 miles. My city is only 6 square miles and my patrol area is about 1 square mile.
We use Raleigh F500, 21 speed Police Mountain Bikes. This is my third bicycle in three years as we have upgraded from older Univega 18 speed Alpinas. My longest ride was two years ago when we (several hundred police officers) rode en masse from Foxboro Stadium (Home of the New England Patriots) to Boston City Hall Plaza, a distance of about 26 miles. The ride was to raise funds and awareness to the Concerns of Police Survivors (COPS) an organization that supports those left behind.
I am the police departments representative to the Somerville Bicycle Committee and we are working on several bike lane proposals, rail/trail conversions and making our city more bicycle friendly. We are currently at the dead end of the Minuteman Bike Trail and proposals are being submitted to determine a feasible way to extend the trail into the Boston city limits.
I would be interested to hear if there are any other police officers on the reflector or in the club. I am sending in my membership application in Mondays mail.

164. Curious about recumbents

Yahoo group: BMHA
Date: 2001-05-14 13:56:09 UTC
From: k8rja@arrl.net
Topic: 164 Message: 164

I am new to bike mobile operation having just started this year. My bike is a 21 speed, comparatively inexpensive bike, which I like. (See files for pictures)I have never ridden a recumbent bike and wonder, besides being more comfortable (I think), what makes it more attractive than an upright bike? They look to be a lot less maneuverable and only suitable for smooth near level terrain. I do plan to find one I can try to see if it would fit my needs as a base for mobile operation.
Any recommendations? One last question, why are they so expensive compared to the traditional design?

Boyd,

I ride an S&B Malibu, SWB, USS recumbent and have never had a visability problem. People sometimes stope me to "have a look", so I think the unusual part outweighs any visability problem. And it's fast - fastest bike I've ever ridden. That is an advantage. I also am a ham and operate form my bike, talking to the world. Being seated makesa tha teasier and the seating position is mucho better on the back and neck. Wouldn't switch.

forgot to address the cost factor. I have less in my bent that a lot of people have in their uprights. Under $500, with great components.

168. Re: Recumbents

Yahoo group: BMHA
Date: 2001-05-15 11:50:23 UTC
From: k8rja@arrl.net
Topic: 168 Message: 168

I saw it, I bought it, I love it. After looking into the pro's and con's of recumbents, I settled on the BikeE AT. I didn't like the "full" recumbent where I felt I was laying down with less than optimal control. A trial ride on the BikeE for the first time was comfortable, but the steering is very sensitive and I needed a little practice before I felt in complete control. My first ride on the bike path was very satisfying. I felt some trepidation as I approached a detour where I had to leave the smooth path and ride up a gravel incline to the roadway and down again onto the path. I downshifted, and prepared to jump off the bike if I lost control, but the detour was negotiated even easier than on my upright bike. I'm looking forward to more challanges on the BikeE.

I'm not sure what that model is; make sure all the components aren't used up. Ie, that it doesn't need a chain (and rear cassette--I think that is a 40ish dollar repair), rear derallier (I know I misspelt that one but I think you get the idea), etc. I'm facing the dilema that it'd probably cost 1/2 (or more) of a new bike to repair my ailing Fischer--it needs all new cables, shifters, brake levers, deralliers, chain, chainrings, bottom bracket... Basically, it has several thousand miles, no maintaince, and is only on it's second chain. Oh yeah, there's that gash in the rear sidewall that makes the bike feel really funny going down hills...

Of course, it doesn't help that the seatpost is stuck in the frame; thankfully, it's at just the right height. :) And no, I don't ever expect to get that unstuck or actually sell the bike. I'll probably ride it until it really breaks, then replace.

Sounds to me like somebody would pay $10/gallon for gas " 'cause they want it no matter what anybody else thinks" even if everybody else is checking around with their friends first and finding it for $1.50/gallon...

I think the BMHA group is a great place to bounce questions/ideas off each other, if for anything just to get a 2nd opinion to their own gut feeling.

I would check around so I wouldn't be paying more than I need too. I don't think that in anyway has anything to do with doing your own thing. I think it's whacked if somebody thinks that checking around with friends before making a purchase to see if there might be something better for the money around or if it in anyway might not be a good idea is in anyway "not doing your own thing" or "not living your own life". And, no I won't get over that. Sorry if I think different than you, but that's life...

Well that's alright for you, I suppose. But, if I wanted something, like an FT817 for example, and the local candy store is selling it for $850, and boy, it's something I would really want, but first I check around and a friend says a reputable store down in Chicago has them for $725, I'm sorry, but, I would like to know that. Ignorance is bliss I suppose, but, the "you gotta live your own life" crap and other similar statements that would fly around on this group if someone asked if anybody had an opinion on something that they were going to purchase is ridiculous. Really ridiculous. Sorry, but that's how I feel.

But Boyd, what if you paid $150 for an item that you really wanted, but then found out later that ten other people bought the same item recently for prices ranging from $ 90 - $ 140. Would you feel sort of foolish being the high bidder of the group ? Wouldn't you wish that you'd have found out the historical market values for the item, and used that information to leverage your price negotiation ? Or do you just take the price that the seller throws at you ?

I was just asking a simple question, I wasn't asking the BMHA group for a bone-marrow donation or anything like that...

Well, I'm like that at a swapfest or auction or something similar, but, if somebody is asking a question like that and has got some time to ponder it, and is genuinely asking the group for some input, I don't see a problem with that. The "got your own life to live" and all of that other kind of attitude thing shouldn't play into somebody asking a group of people with similar interests what they thought. I thought the reply stating the things he should check was great. If somebody didn't really care what anybody thought about what microphone, battery pack, antenna, bicycle, rig, pricing, etc, the other members really liked or regretted buying because "they got their own lives to live", well, they shouldn't be on an e-group knocking people discussing those things.

Ok Guys... Take this OFF the list. If you have a problem with other values tell them off the list, and STOP spamming everyone else with this bull. I DON'T care if you don't ask for others opinions on purchases, but Elroy does, and this is fine, and futhermore this is the most appropriate HAM place to do it. So as I said if you have a problem with him or his values tell it to him because I DON'T care to know your opinion, just like you don't care to know others.

GET A LIFE !

I also apologize for any statements I might of made concerning this well thought out, intelligent, and constructive piece of advice for fellow BMHA members. In my "weirdo" ways I misconstrued it as a negative response to somebody wondering why anybody would want to talk prices on a used Trek bike on the Bicycle Mobile Hams of America -e-group.

And this will be the last I discuss this particular matter on this e-group.

Hi,

> And this will be the last I discuss this particular matter on this e-group.

Quite possibly the most intelligent comment in this thread so far! Listen: This is a DISCUSSION list. Although some opinions are not always welcome, people are GOING to disagree. There's nothing I can do about that. But it wouldn't be a discussion if there weren't differences in opinion. I won't unsubscribe someone just because his/her opinion isn't popular or because of "offensive" comments. As long as discussions are civil, clear of foul language, and don't initiate personal attacks, anything ON THE TOPIC of Bicycles and Ham Radio are okay.

Someone complained and wanted me to moderate posts. Do you really want that? I get online about 3-5 times per week. Should I go to sea, your posts will make it to this List about every 2-months! I know I don't! Let's play nice, agree to disagree, and be grown up enough to ignore what offends us, shall we? If someone persists at being a constant source of irritation, I'll deal with them accordingly. Frankly, I see more aggrevation in the RESPONSES to the alleged offensive remarks than I do in the remarks themselves.

Please stay on topic. If you don't know whether $150 is a good price for a given bike then don't comment. If you do, state why. Sound like a plan? Let's put the argument to rest and answer this guy's question, as some actually have, shall we?

194. HT power connector from 24V electric assist bike power packs

Yahoo group: BMHA
Date: 2001-05-17 17:22:08 UTC
From: seventronics@yahoo.com
Topic: 194 Message: 194

Folks,

I have two Currie Technologies USPD electric bikes, and I have been interested in powering an HT (Icom T8A or old T2) from the electric bike 24V battery pack. Warranty issues aside (the 24V frame mount pack has a seal on it and I'm not sure I want to void the warranty on this 3 month old unit just yet !), I want to efficiently power the T8A or T2 from a 12V DC-DC conversion of the nominal 24V pack voltage.

Yes, if I just cut the seal I can tap off one of the two 12V batteries. What I think is a better solution is a portable interface between the two bikes that inserts a 24V "tap" in between the battery to motor DC connector.

I cannot find a 24V to 12V DC-DC converter module anywhere - does anyone know of such a module ? I'm happy to bundle a DC-DC converter module with the peripheral electronics, but not interested in building the DC-DC converter myself.

Appreciate any hints,tips, pointers.

Thanks, Mark (W4CHL and 7tronics Plc)

<snip>

I took a quick peek in my DigiKey catalog. You might want to check out DigiKey part #179-1016-ND. It is a 900 mA DC-DC converter. 18-36V input. 12V output. Price $68 in single-part quantity.

I'm sure there are other sources for higher current DC-DC converters, and the 18-36V input is a common range, as is 12V out. But the higher you go in current, the higher the price.

You might consider using a separate small 12V battery to power the radio... or just use the HT's internal batteries. The HT's battery could get charged from the 24V system using a low-current (inexpensive) charge circuit. You should be able to get by with a pretty small battery (and small charger) if your transmit time is short compared to your receive time.

Topic: 194 Message: 197

That seems like the best idea so far... Carrying a second battery and charging. Two thoughts come to mind:

1) my old Yaseu handheld used a wall cube to charge the battery--it plugged right into the battery pack on the radio. As far as I could tell, I could plug in the radio and it would charge, even with it on and all. In the car (ie, unlimited current supply), it would transmit with even a dead battery. Maybe the same could be done here, but a voltage regulator (1A plus) would still be needed (to regulate down to 14ish volts).

2) get a battery case (alkaline or ni-cad), and put your own trickle charger into that (with ni-cads of course). C10 charge on that would be about 60mA, give or take, which translates to .06*(24-14)=.6W. A bit high to dissapate in the radio, so perhaps that regulator/charger should be bolted elsewheres, but then you could run low current wire (small gauge and all) to the radio.

It seems wasteful to use linear supplies for this project, but I'm guessing that the current used by the bike itself will put the current draw of most handhelds to shame. Plus, dc-dc supplies can generate gobs of noise easily, which might not be an issue at vhf, but if you intend to do hf, or listen to the am air band, I wouldn't be surprised if you have interference. But I guess that assumes that the electric motor itself is rf quiet, so perhaps I am just rambling (which I am well known for).

198. Bicycle mobile public service report from the field

Yahoo group: BMHA
Date: 2001-05-21 13:35:37 UTC
From: Peter Wang
Topic: 198 Message: 198

I was a bicycle-mobile for the Arthritis Foundation "Joint Walk" yesterday, 20 May 2001 in Houston. This walk was served by hams from all over Houston, led by Mike N5VCX. Interestingly, the walk was kicked off by Houston's Mayor, Lee P. Brown, who admitted in his speech that he also suffers from arthritis.

The bicycle was very useful for following the last two walkers. These walkers foolishly left the riverside course, and wandered below the banks of Braes Bayou down out of sight close to the waters edge. I saw them while riding the course, admonished them, and brought them back up to the proper path. They were invisible to cars on the roadway. Had they fallen in, possibly no one would've noticed.

Later, these same two walkers missed the last turn, and were headed off away from the finish line. They were weak walkers, and would've eventually run into heat exhaustion problems. The police and rest stop volunteers did not know they were still on the course, and were closing the route before they finished. They did not see them miss the last turn. On my final loop, I picked them out, and directed a sag wagon to pick them up.

I was using a 3 amp-hour gel cell in a fanny pack to power my HT. This gave me extensive talk time at 5 watts out, which was extremely useful. Also, it only cost $ 11.25, and I charge it with 13.5 VDC regulated. HT was a Yaesu FT-50RD, antenna a flexible 1/4 wave whip.

Accident report: Going over those silly speed control bumps in Houston, my bike dropped off of the car down onto the pavement, hard on the rear wheel, and it got an "S" curve" in it. Looks like a new rear wheel is in my future soon.

Sincerely,

Pete KF5ND

I simply used an external power cord for the gel-cell. I did not attempt to physically mount the gel-cell and HT together. The battery is in the fanny pack, the HT holster rides on the fanny pack belt.

Date: 2001-05-23 16:09:57 UTC
From: Peter Wang
Topic: 201 Message: 201

Would BMHA members be interested in producing a customized BMHA Team Jersey ?

I would be very interested in owning a jersey for the Public Service events that I do.

Here are my thoughts:

- high visibility color (yellow, orange, etc)
- large block letters across shoulders & upper back: AMATEUR RADIO OPERATOR
- logo on left chest: BMHA or ARRL

What do people think ?

Good idea, Peter. Because some members of BMHA may not belong to ARRL (I do) the BMHA logo probably would be the better of the two. Non-bicycle hams wear orange baseball caps in the Pittsburgh area for Public Service events, so orange may be the best color.

The current Bike Nashbar catalog has two plain polyester jerseys shown, but no orange. Both come in yellow. One is EvapR8 polyester for $27.90. The other is Coolmax polyester for $29.99. Performance catalog used to have a similar team jersey but it's not in the current catalog. Those are the only two catalogs I get. A tee shirt producer could probably silkscreen the logo and lettering. That route might be less expensive than contacting a manufacturer of jerseys.

It's been my experience with silkscreening that it leaves a fairly
non-porous area on the surface...at least I think that's why I have such a
hot and sweaty area when I wear a screened t-shirt on a ride. Not sure if
all screening process or materials have this issue, but I just thought I'd
mention it and see if anyone else had noticed a similar effect.

206. RE: [BMHA] Idea: BMHA TEAM JERSEYS ?

Yahoo group: BMHA
Date: 2001-05-24 00:50:47 UTC
From: Andrew R. Young
Topic: 201 Message: 206

I would be interested in participitating as well. It has been my experience that not everyone knows about amateur radio or "ham's". I don't know if "Communications" would be appropriate or not. Many times when I participate in community events, I do first aid as well as communications.

A thought comes to mind. I don't have a catalog handy to check, but Galls (www.galls.com) is a provider of police, fire and emt items. They do have accessories for bicycle police, etc. They also have orange (or yellow) vests that have velcro on them so that signs can be changed among them. Used more for a fire scene (safety officer, public information officer, incident command, etc.), we may be able to have someone design a flap to affix to a vest.

Just a thought.

Subject: [BMHA] Idea: BMHA TEAM JERSEYS ?

Would BMHA members be interested in producing a customized BMHA Team Jersey ?

I would be very interested in owning a jersey for the Public Service events that I do.

Here are my thoughts:

- high visibility color (yellow, orange, etc)
- large block letters across shoulders & upper back: AMATEUR RADIO OPERATOR
- logo on left chest: BMHA or ARRL

What do people think ?

73,
KF5ND Peter

Yes, often during public service events a high-visibility reflective vest is very much required safety item. Good idea.

Also, I agree the silk-screen does tend to ruin the breathability of a jersey, and it makes for a wet & uncomfortable ride. At least you can take a vest off when you don't need it.

When I have more time, I'll get back to everyone and we'll flesh out some options. I found a place that will do "stock customs" for lots of 12 or more, for about $50 each.

I haven't done this yet, but I think it's going to work: Get a "Tool-
E" storage box for the back of your bike. You can drill it and
intall an antenna mount without harming your bike. Put your
batteries inside of the "Tool-E" box. Here is the web page:

213. BMHA Founder, Hartley Alley, NA0A has passed away

Yahoo group: BMHA
Date: 2001-06-01 18:05:51 UTC
From: nf0n@arrl.net
Topic: 213 Message: 213

I just received word from Jean Alley that Hartley Alley, NA0A, has passed away. The services will be Tuesday. She indicated the family would prefer no flowers however donations can be made to the family, and the donations will be passed on to an organization that Hartley had specified.

I will be making a donation to the family from BMHA and will indicate that it is from all BMHA members.

It is with great sadness that I heard of the news as I enjoyed the times I had spent with Hartley in many of the BMHA activities over the years. He was a source of great enjoyment and expertise that one can never replace.

Jean is sending me the obitiuary and has indicated I (we) can post or publish in an upcoming newsletter. I will post it on this newsgroup once I receive it.

From: Pres Waterman
Topic: 214 Message: 214

I mounted my Superantennas MP-1 with mobile kit (an extra long base rod and flexible whip to replace the telescopic top rod) mounted way out back on the rack above the rear tire.

I first tried it last week and had no QSOs. No counterpoise except the bike frame itself.

Today I was at a freind's house (WD8CDH, a neighbor) telling him the story that it didn't work from last week, and I promtly signed onto ECARS at 7255 KHz as QRP Bicycle Mobile. Well the guy in the Poconos (about 150 miles away) just about fell over when I told him I was running 2.5 watts.

I found the MP-1 to have a slightly different low-SWR point from the highest background noise area.

215. Boston Globe article about Recumbent Bikes

Yahoo group: BMHA
Date: 2001-06-04 00:33:06 UTC
From: ka1ttg@aol.com
Topic: 215 Message: 215

An article which ran in today's Boston Globe about Recumbent Bikes. I thought some would find it interesting! Enjoy and 73 de Bob, ka1ttg BELMONT - When Greg Rector goes to work, he likes to kick back and enjoy the ride - on three wheels. Rector, 46, a software engineer, is one of a slowly growing legion of recumbent bike enthusiasts in Massachusetts. Recumbents are odd-looking but reportedly very comfortable bicycles that are longer than regular bikes and much lower to the ground. Most sport a small wheel in front, a larger one in back, wide heart-shaped seats, handlebars high and forward - some liken them to ''chopper''-style motorcycles - and pedals in front of the rider. Odder looking still is Rector's recumbent, a reverse tricycle-style creature with two wheels in front, and one in the back that he said is dubbed the ''tadpole.''''Riding recumbents [is] so comfortable,'' said Rector, a longtime bicycle enthusiast, ''it's allowed me to double the distance I usually could cover.''That includes commuting to work in Waltham from his East Framingham home, he said, a 38-mile round trip. Rector said he rides about 4,000 miles a year.''I'm trying to get car-light,'' Rector said. He added he would consider ditching vehicular transportation altogether, ''but it's tough to do with a family.''So enamored with recumbents was Rector when he first test drove one 41/2 years ago that he bought one right away. ''I was enthralled, totally enthralled. I just couldn't believe how comfortable they were,'' he said.As soon as he bought it, he said, ''I sold my regular bike because I knew I'd never go back.''That sort of testimony does not surprise Scott Chamberlain of Belmont Wheel Works, the state's largest - and one of its only - recumbent bike dealers, and where Rector bought his. Customers come from as far away as New Hampshire and Rhode Island to test and buy the bikes, he said.The store sells a wide variety of all types of bikes, and while recumbent sales are on the low end of total volume, it is all relative, according to Chamberlain.''We probably sell about three recumbents a week,'' he said. ''Which is about 1 percent of our total sales [but] we sell an incredible amount of bikes.''While acceptance of recumbents in the East is growing, it is hardly explosive, in part because they are so hard to find in most bike shops. Some carry a few recumbents, according to Robert Bryant, publisher of Recumbent Cyclist News, but mostly they have to be ordered out of a catalog. Bryant's publication (www.recumbentcyclistnews.com) includes a demographic work-up of typical recumbent riders from his readership. He said 94 percent of recumbent riders are male, with 30 percent 40-50 years old, 35 percent 50-60, and even 5 percent 70-90, all of which he said shows that the older we get, the more comfort we seek in our recreational activities.''I love all kinds of bikes, but if I'm riding for more than an hour, I grab a recumbent,'' he said. ''It's just a lot more comfortable.''Acceptance is growing, Chamberlain said: ''It's one of those things, the more you see it, the more it's accepted. People might feel awkward riding one, but there's a whole new group of consumers getting into it. Before it was perceived as being for the pocket-protector, engineer type, guys with beards and helmets. ''Since recumbents are low to the ground and the seat leans back, it is a more leisurely ride, especially for people using paved bike paths, which abound here, Chamberlain said, such as the 101/2-mile Minuteman Bike Path from Cambridge to Bedford. Also popular is the Paul Dudley White trial, a 17-mile route around both sides of the Charles River in Boston, Cambridge, and Watertown.One drawback some see in recumbents is price, Bryant said. They tend to be a good deal more expensive than regular bikes. One manufacturer, BikeE, the largest recumbent maker in the country, has come out with an entry-level model that starts at $350. Other models boast more features, including

air-shock suspension, and cost up to $2,200, said Lee Eckroth, BikeE's marketing director.''My bike was about double the price of a regular recumbent,'' Rector said. ''But I justify it with the health benefits, fun, and the use I give it.''Recumbents are recommended by many chiropractors for people with back pain; the wide, tube-frame, mesh-covered seatback supports the rider's upper body.When Doug Kelly plummeted over the handlebars of his conventional bicycle last September and fractured both elbows, the last place he expected to eventually land was the seat of a recumbent bike. But that is exactly where he is these days when he rides.Kelly, 49, a Sharon resident and an investment manager in Cambridge, swears by his recumbent, saying that with his injury, it is an extremely comfortable ride.''What I found by getting back on an old-style bike was that you're leaning forward and there's pressure on the arms where I'm still pretty sore,'' Kelly said. ''I tried a recumbent bike and loved it; it's just a much more natural seating position and doesn't bother my arms at all.''And as baby boomers age and seek out more comfortable ways to stay in shape, it bodes well for the recumbent industry.''Yeah, I get some curious looks from people,'' Kelly said. ''Sometimes teenage kids will hoot and honk at me when they drive by, but you know what? At my age, that doesn't bother me anymore.''This story ran on page 05 of the Boston Globe's Northwest Weekly on 6/3/2001. © Copyright (http://www.boston.com/globe/search/copyright.htm) 2001 Globe Newspaper Company. 216. Hartley Alley/ Mid-America Bicycle Mobile Camping Trip

Yahoo group: BMHA
Date: 2001-06-04 15:07:28 UTC
From: WB9GIE@webtv.net
Topic: 216 Message: 216

Not sure if this went through the first time I sent it, so here's another attempt:

Very sorry to find out about the passing of Bicycle Mobile Hams of America (BMHA) founder Hartley Alley, NA0A. When our paths crossed around 1990 he was one of the few people that understood what most of us bicycle hams had been trying to do and I'll say he did everything he could to support my endeavors and write up articles (many of them!) about my bicycle sation in the BMHA Newsletters. We had many phone conversations back then and whenever I had finished talking to him on the phone I felt like I had gone to a ham radio mobile pep rally! I certainly miss him very much.

In my personal near future, I'll be leaving on a solo bicycle trip early Saturday morning, June 9th,
2001 from my home QTH in Milwaukee, WI heading west and going through Wisconsin, Minnesota, Iowa, Missouri, and Illinois. I'll be working 3.5
Mhz to 440 Mhz, 2.5 watts AM/FM/SSB/CW, using an FT-817, randomly, throughout the trip. I should be on the road for about 16 days of cycling and camping.

On 6m (my favorite band!) I'll be running 2.5 watts USB to PRO-AM fiberglass 6m whip. On 2m I'll be using a homebrew J-pole and on the HF bands I'll be using my Hustler mobile whip with resonators.

Recent contacts on 6m from Wisconsin on the bicycle include N4HGZ in Wilmington, NC just last week.

Here's a pretty simple WebTV webpage I have updated in the past week or so
that has some photos, links, and info you might find useful:

http://community-2.webtv.net/WB9GIE/WB9GIEsBicycling/

I won't have too much time this week to respond to inquiries, but, I will certainly try my best to answer all questions by the time I leave Saturday morning.

From: w4chl@arrl.net
Topic: 194 Message: 217

Thanks for the ideas - two others came from another group. I have added an ARES connector to one of the two batteries in a battery pack that has no factory seal (added a fuse to both high and low current output, too). As noted in prior responses, the current draw for the 5W HT (measured at 0.85A peak) is dwarfed by the 27A peak current to the motor, so the HT isn't going to unbalance the two battery pack by much. If it does, then I'll setup a 12V float charger on the battery with lesser charge or higher life expectancy (as measured by an ELK Battery Life Tester, see http://www.elkproducts.com/products/elk-blt.htm).

During motor assist there is a definitely audible QRM on 2m and 440MHz, less noticable on 6m. But I can't recall trying to transmit while using motor assist (usually when riding up a hill) when I am also adding a good deal of my own energy to cranking and maintaining speed. While stationary, there is no discernable QRM from the idled power electronics on the bike. One of these days I'll get to pulling together some photos, for now I covet the Bike Mobile station of WB9GIE !

Cheers, Mark (W4CHL and 7tronics, Plc)

219. Kid's Day 16June in your area, how about listening for CQs ?

Yahoo group: BMHA
Date: 2001-06-05 18:46:55 UTC
From: w4chl@arrl.net
Topic: 219 Message: 219

Dear BMHA Folks,

Last year I saw an announcement on the ARRL site (updated now):

http://www.arrl.org/FandES/ead/kd-rules.html

and dutifully had my eldest (7yr old girl) calling 'CQ Kids Day' over several area 2m and 6m repeaters in our Central NC area. No one responded. Let's help make this year's Kids Day on Saturday 2001-06-16 (that's 16June2001) a success by just paying a little more attention and responding to that really rare event - someone calling 'CQ' on 2m !

If you are on the air between 1800 and 2400 Z (UTC) and hear someone calling 'CQ Kids Day' I hope you'll take a moment to have a quick QSO with a youngster !

We can get some activity on 2m this year for those of us who STILL haven't gotten their code requirement nor have phone capabilities on the other bands suggested at the URL above.

Please ask your repeater sponsor both to gain permission for use during Kids Day and to alert them (advertise) to the opportunity for gaining interest from young potential hams !

73s, Mark (W4CHL and 7tronics, Plc)

221. Re: Kid's Day 16June in your area, ARRL announcement

From: w4chl@arrl.net
Topic: 219 Message: 221

* Kid's Day is just around the corner: On June 16, 1800 to 2400 UTC, kids of all ages are invited to experience ham radio during Kid's Day. Amateurs are encouraged to invite youngsters into their shack to enjoy the fun.

Kid's Day began in 1994 with a one-hour program created by the Boring Amateur Radio Club in Boring, Oregon. The youngsters exchanged names and their favorite colors. Forty kids participated. Last year, more than 1000 took part in the event, now sponsored by ARRL. There's no limit on operating time. The suggested exchange is name, age, location and favorite color.

You may work the same station again if the operator has changed. Call "CQ Kid's Day." Complete information is on the ARRL Web site, http://www.arrl.org/FandES/ead/kd-rules.html
and in the June issue of QST, p48.

Good morning all,
I hope that Field Day treated you all well, and blessed you with many qsos.

I spent the weekend fighting off the last traces of a cold and putting the finishing touches on my new ham station, the N1RWY/ BM (bicycle mobile).

I had a great time working folks on Field Day, running a Hamstick for 20 meters and 2.5 watts from the FT-817.

My favorite comment of FD I received when working a YL operating in Ohio after I told her that I was on my bicycle..

"You are operating from where?? On a BICYCLE??"

More information about the bike, the rig and the system are on the new web site I created.

As a Bike E owner for the last 5 years or so I have operated with a 2M HT and rubber duck a few times but this year I bought an '817 and have thought about mounting an HF antenna on it. Someone pointed me to a site that shows an accesary 'toolbox' that mounts to the back of the fram that someone though could be used to mount an antenna on w/o with putting a hole in the Bike E but my inclination would be to just put a hole in the back of the frame for a hamstick or hustler.

Has anybody doen this? Will the hole affect anything on the Bike ?

Hey Paul,
Warranty of the bike.
I am thinking of doing this for my wife's bikee as well.
I spoke to my local recumbent dealer about this question since I had to order some stuff for him anyway.{ http://www.stillwaterrecumbents.com }

He said that if you drill a hole in the frame you will void the warranty for the bike, and resale value would drop. He did not convey any information about the hole compromising the bikes integrity.

He did mention some sort of carry device that most recumbent dealers carry, the mount slides on the bike much similar to the way that the seat does. I guess some folks use these to mount a milk crate to the bike to carry stuff. That, plus additional grounding might work for you.

I was thinking that if you put a rack on the back of the bike, you could mount the antenna to it. (After you scrape all of the paint for your grounding connections.) That way you have not 'devalued' the bike and on the other hand gained an antenna mount as well as a place for some additional storage. (battery storage for the radio, additional antennas, APRS trackers, just to name a few.)

Just my 2 cents..

Jay n1rwy/bm
(Not affiliated with the above mentioned bike dealer.. just a VERY happy customer.)

229. Antenna mount

Yahoo group: BMHA
Date: 2001-06-29 10:51:15 UTC
From: k8rja@arrl.net
Topic: 229 Message: 229

I just purchased a couple of the accessary mounting brackets (they are sold as a package of two) and they slide onto the frame and are secured by a quick-release cam, however there is no electrical ground connection as the parts that contact the frame are hard rubber. If a metal platform were bolted to the brackets and a ground wire run to a bolt on the frame, I believe it would serve as a practical antenna mount. The brackets are pictured on the BikeE page (www.BikeE.com) under accessaries.

Yesterday I was bicycling around with the FT-817. I have a neighbor ham whom I have never met. I heard a stomping signal on 40AM and gave him a call. He just about fell out of his chair when I said I was bicycle mobile. He asked if it was the new Icom. Well, I told him it was a Yaesu and he should come out to his driveway to see it. What a hoot.

RE: [FT817] impressing a neighborHow do you mount/ carry your 817 on the bike & have it accessible but not overly precarious/ vulnerable (& operable without distracting you from control of the bike, etc.)?

I enjoy cycling and have thought it would be fun to take my 817 along (especially once I get my MP-1 which should arrive in a few days), but have been trying to think of how to do it so as not to smash up the radio, bike, or myself in the process.

Well, let's see...

At Dayton (Hamvention) I saw the booth for RAM Mount (http://www.ram-mount.com/) and was impressed, as I was last year. They are very interested in selling through distributors but I cajoled the guy into selling me the floor samples at the end of the show.

Basically they have doodywahs that clamp onto the handlebars. Then there is a rubber ball and a stalk thingy. Topping it all off is a plate, or GPS mount, or whatever. So the plate has this other bracket just about as wide as the FT-817 and the 817 stays in the bracket, held in with Velcro. The 817 and the GPS seem to float above and in front of the handlebar. The angles are continuously selectable.

I have not yet gone to a gel-cell power system, just running both on internal batteries.

Back on the utility rack over the rear wheel is a flat aluminum plate and a MP-1 with mobile kit. I have a spring so the whole magilla can flex when I tip the bike down to mount it.

I have talked 200 miles on 40m, and heard lots of DX on the higher bands. Not many QSOs because I am just dabbling so far.

Now, I'm off to the bike store to try a recumbent, which may require a whole 'nother mount idea.

Thanks

What a small world..
I sent email to the ram folks last week about mounting my 817 to the
handlebars of my recumbent.

This is what they sent back to me:

**
The systems that would work best for your application and incorporate a
RAM-B-149Z base are as follows:

RAM-B-231Z U-bolt mounting base ($15.59)
RAM-B-201 double socket arm assembly ($19.05)
RAM-B-111B ($19.20) or RAM-B-202 ($14.67)

Total $53.84

The RAM-B-111B, universal electronics base only, is the 2"X6" plate that can
be seen on the B-111. The RAM-B-202 is a 2 1/2" dia base that could be
attached to the radio using hardware or an adhesive pad(RAM-202PSA).
**(If you use this adhesive pad, you will not be able to get to the battery
compartment.)**
Contact one of our online dealers or Varga Intl. at 800-966-6936 for more
information or pricing. Thanks for including the link. That was a big
help!
***

I figured that I might be able to do the same thing with a whole lot less,
(which I think I did) and that information is on the web site below.
http://www.cutlerhealth.umaine.edu/~baack/bikemobile/

Total cost was about $7.00, and the radio removes very easily in the case of
bad weather.

> Back on the utility rack over the rear wheel is a flat aluminum plate and
> a MP-1 with mobile kit. I have a spring so the whole magilla can flex when
> I tip the bike down to mount it.

I have yet to find a spring or a fold over mount that works well. I always
have SWR problems with them as they flex, which is why I went to a hamstick,

and resolved to remove the stinger every time I need to bring the bike inside. However, having said that, some others have used a outbacker and have had good results from 30 meters and up. On 40 and below, there are some major grounding issues that need to be addressed as your bike frame just is not enough "metal" to provide a sufficient ground system. You have to be real creative here!

> I have talked 200 miles on 40m, and heard lots of DX on the higher bands.
> Not many QSOs because I am just dabbling so far.

I busted a pileup on 20m the other day, what fun is that! 2.5w, hamstick, and 13 mph cruising down the road, I had a real big grin at that point!

> Now, I'm off to the bike store to try a recumbent, which may require a
> whole 'nother mount idea.

Welcome Pres, to the way riding is meant to be!
(evil recumbent rider grin here..)

I hope you find your way to but a new recumbent in your collection of bikes, I think you will like it.

I have the 2x6 base. I am thinking of a huge Velcro pad on the bottom of the radio, with sufficient cuts to allow the battery case to open. If the 2x6 base isn't big enough I may connect something larger and flat to be as big as the radio.

Putting fuzzy Velcro on the bottom of the radio would be nice for several reasons, like anti-scratch on tables etc.

BTW actual VELCRO brand Velcro is available at Home Depot and is good stuff

235. side rails idea

Yahoo group: BMHA
Date: 2001-07-03 19:11:03 UTC
From: Pres Waterman
Topic: 235 Message: 235

Pursuant to a simplex discussion I am having with Jay about mounting the FT-817...

It seems Yaesu is in no hurry to come out with a mobile or bicycle mobile mounting bracket. We came up with an idea:

Perhaps a side rail sort of thing, replacing the shoulder strap bracket and running from the front 2 side-screws to the back 2 side-screws. Mounted INTO this rail would be 2 6mm screw receptacles so that thumbscrews could mount the radio into a bracket. Kind of like the FT-100.

Any small manufacturers (W6MMA or W4WB for example) want to think about making these?

Thumbscrews:

```
|||||||| |||||||||
|| ||
__o_________o___
_v_/ 0 0 \_v_
| |

////////////////////////////////////////////////////////////
FT-817 top view looking down the sides //

//\\\\\\\\\\

//\\\\\\\\\\ rear antenna socket

//\\\\\\\\\\
//
//
```

This is a side view of the concept. The rails screw into the sides of the radio, and only stick out enough to accommodate the 6mm screw sockets, represented by the double "0" symbol. The little "v" represents where it screws into the radio. If unobtrusive enough they can be left on all the time.

Alright, I got a little carried away with the ASCII-art, if it even qualifies. Boy, I hope most of you can see it

GREAT! I just got a BikeE CT yesterday. I am seeking ideas about 1 long antenna mount also. I have the two brackets on order and also the tool tray that slides inside the frame.

But I would appreciate much closer shots of the antenna mount please.

Currently I am considering drilling 2 holes in the frame in the back and attaching about a 10" aluminum flat bracket to stick out over the rear tire, and mounting the 3/8"x24 receptacle there for the MP-1 antenna on a spring.

249. Newsletter Almost Complete...

Yahoo group: BMHA
Date: 2001-08-17 05:28:54 UTC
From: ke4wmf@aol.com
Topic: 249 Message: 249

Greetings, Contributors! The Newsletter is nearly complete. I'm still waiting for the following: 1) Webmaster's Corner from Skip - If you make any comments regarding Hartley, I'll probably move them to the front page. I'm trying to make the front page "All Hartley." I never did get a clear photo of him, though. 2) Some Letters/Q&A - I just saw some really good stuff on the YahooGroups list that I'll transcribe. That FT-817 is a really hot item. It appears to have a regular spot in the Newsletter. 3) Address for membership renewals? Mike, there's an "I" (aye) on the membership renewal form. I forget... does it belong there? Also, I wrote a paragraph that shows the status of our membership. I mentioned the new mailing labels and that beginning in 2002, only paid members will receive the Newsletter. This Issue and Future Issues... 1) It looks like I won't get a OCT/NOV/DEC issue out. My ship will be at sea for nearly the whole quarter, returning on December 20th. Should I make the JAN/FEB/MAR issue the last one for members who aren't paid up? 2) Someone named Richard "Dick" Arnold sent a very good article for the Newsletter. I'd like to use it, but don't know his callsign, e-mail address (got lost when I turned in the gov't laptop), or club status. I didn't find his name in the club roster. The name of the article is "Against the Wind," but talks more about HF mobiling. Dick, if you're out there and get this, can you e-mail me? BMHA Officers, are we printing articles from non-members if Dick (or anyone else) turns out to not be affiliated with the club? 3) The feature article this month is "Cycling El Camino del Diablo (Almost)" by N7NET (finally, right?). ;-) I'm considering either Dick's article or VE3JC's Mammoth article on QRP operation for the next issue. Bil's FT-817 is on deck as well, but may wait a little longer, depending on how well I'm filling the space. 4) It's possible that instead of omitting the OCT/NOV/DEC issue that I may do an abbreviated issue, just to make contact and keep something flowing. I'm figuring either a single-sheeter with just club news and announcements or a single, folded 11x17 (four printed pages). Let me know what you think of this. 5) Also, Dave Gerbig, WB9MZL, is now a silent key. Although I want Hartely to have the front page, I don't want to leave Dave out. I never knew him, but he appears to have contributed heavily to the club. Therefore, I pulled the "Letters" section that normally appears on the back cover and gave Dave the back cover. I think that about covers the upcoming issue. I'll be sending it Ed soon for PDF conversion. Let me know if there's anything else you'd like added or considered. 73, Scott A. From: Mike Roberts
Topic: 250 Message: 250

Hello All.

This email is to inform everyone of the upcomming
Radio Amateurs of Canada 2002 National Convention.
This even will be held July 26, 27, 28th of 2002 in
Vernon, British Columbia, Canada. For those who are
unfamiliar with RAC, it is the Canadian version of
ARRL. This event is the second ever put on, with the
first happening 5 years ago in Calgary, Alberta. It
was a major success. This event was one of the
largest amateur radio events EVER in Canada. This
upcomming convention will be the largest amateur radio
event over the last 5 years in Canada.

This is meant to inform radio amateurs who might be
interested in attending.

Additional Information is available online at

http://www.rac2002.org/

Please forward this email to anyone you know that
might be interested.

See you there,

Mike Roberts,

256. Re: Bike E Suspension Fork Recall...

Yahoo group: BMHA
Date: 2001-09-12 15:35:17 UTC
From: ke4wmf@aol.com
Topic: 251 Message: 256

Hi,

> i have a bike -e for sale if you are interested

My recumbent purchase will be a distant one. I'm still saving... and having second thoughts about the BikeE. I have my eye on a WizWheelz Terra Trike. although it's more expensive, it seems to also be more fun, more stable, faster, and just a better bike in general. My preferences may continue to sway as I do more research and, perhaps, ride a few bikes.

Take Care,

Scott

257. Bicycle Antenna Suggestions

Yahoo group: BMHA

Your question would be easier to answer if you specify the type
recumbent/regular/mountain, etc.) of bike you have in mind

Topic: 257 Message: 259

Hi Dan,
Pictures are worth a thousand words, so check out the member web sites on the bmha page. This will give you ideas on the physical mounting for a mobile antenna.

As for which antenna to use, a lot depends on your rig. For single band use, hamsticks are great. For multiband operation, I love my Outbacker. Don't pay full price for one - be patient and you can pick one up at fleamarkets / swapshops for a reasonable price.

Any counterpoise other than the bicycle itself is impractical. You can adjust your antenna (or add a "capacity hat") to achieve resonance with the limited counterpoise your bike provides. An SWR analyser (eg MFJ 259) is great for tuning before you head out on the road. Be sure to test antenna resonance while you are sitting on the bike - Your body makes a difference!

Keep us posted on how you make out!

From: Scott aka Stealth TDI
Topic: 266 Message: 266

Hi,

Please excuse the SPAM that prompted this response. The person that sent this HUGE message has been removed from the BMHA list without warning. All of the original posts have been removed.

I had noticed that someone subscribed, then quickly unsubscribed. It may have been the offender. Therefore, this board now requires approval for membership and temporary moderation for new members. This should not effect current members; but should prevent this from happening again. Off-topic messages, especially of this nature, will not be tolerated. I hope my other moderators will make the same swift response when I am at sea.

The list may be a little slow lately. But let's keep the off-topic stuff elsewhere.

Thanks,

Scott A. Farrell, KE4WMF

From: nf0n@arrl.net
Topic: 270 Message: 270

We have been approved for our yearly BMHA forum for the 2002 HamVention. The forum theme for 2002 is Emergency Communications. I am looking for volunteers who would be interested in presenting at our forum with the theme of Emergency Communications. It should be bicycle related of course. I have received word from the HamVention forum coordinator that some forums could be bumped for additional theme forums and I would certainly like to be prepared to have a forum topic that is related to the 2002 theme.

Please contact me if you are interested.

The risks of using "reply". I thought that I was replying to Mike, but instead sent it off to the
group mailing address.

You all now know that I use ATT Broadband for my cable Internet access (and I don't even use cable
television). No harm done.

I'll get this onto the BMHA website shortly.

I have to ask, Scott --

Where in the south Pacific?

My wife and I spent our 20th wedding anniversary in Tahiti (actually Bora-Bora and Moorea), and a
few months later won a radio-station contest and went back (Tahiti and Bora-Bora).

I'm sure the USCG isn't into such spectacular accomodations, but I'm curious as to where you've
been.

275. MFJ Mini bug catcher

Yahoo group: BMHA
Date: 2001-12-03 12:43:16 UTC
From: Dwight
Topic: 275 Message: 275

Has anyone tried the new "Mini Bug Catcher" from MFJ? It looks like it would be ideal for bicycle mobile and the price is right. It is advertised to work on 40 through 6 meters, but I suspect it could also work on 2 if you telescope the whip down to 18 inches.

Due to the fact that we're on a counternarcotics patrol, I can't say where we are, but I'll post what I put in a recent e-mail:

Things haven't been very exciting around here lately. I can't tell you exactly what we're doing out here. But I will say that it's like a game of chess: There are two players, many moveable (deployed) pieces, and sometimes a given piece may not move for a while in order to keep another piece in check. Well, we're a piece that hasn't moved for a while. We've been at sea ever since we left San Diego about a month ago. We're unsure of when we'll get a break. But we find ways to cut loose while we're out here. I'll give you more info when our role in this "game" is over.

There hasn't been a lot of busy days, but we still manage to keep ourselves occupied. My qualifications for Landing Signals Officer (LSO) Phone Talker are nearly complete. Once I pass an LSO physical, which should be interesting, I can start the qualification process for LSO. I also intend to get recertified as a Aircraft Direction Controller, just in case the other controllers need assistance. Flight deck operations provide a little entertainment. We play a little "Helo Roulette" when the helicopter shuts down. You see, each of the four blades are marked with a specific color (red, blue, yellow, black) to indicate their place on the airframe. We try to guess which one will stop closest to us. We also try to guess how much fuel will go into the helo when we refuel it. Yeah, pretty dumb! Sometimes it doesn't take much to amuse us out here. ;-) Some of the guys in the shop are in the process of writing a fictional novel about the Coast Guard. It seems pretty interesting, especially since it's based on REAL events of the CG and the true atmosphere at sea. Some of the books floating around out there about the CG were quite obviously written by people who know nothing about the CG, or the military in general. I look forward to the final release. It has a lot of funny stuff in it, based on the shenanigans that take place at sea. Our most recent shipboard adventure included the "DC Olympics." Basically, we break up into teams and practice

damage control stuff and try to set time records. For the most part, it's a chance to play in the water and make a lot of noise.

For those that don't know, we crossed the Equator about a week ago. Initiations will begin tomorrow and carry on through Monday morning. "Haircut Insurance" has been on sale for a bit now. The "barber" usually leaves some pretty demented hair styles in his wake. The women are a little concerned. I told one that we don't use clippers on women. She was relieved until I told her that a nice set of bolt cutters removes a ponytail in one quick snip! ;-) Ah, the fond memories of past initiations: the haircut, the bobbing tank (filled with Tabasco and pepper oil), the whale's belly (don't ask!), kissing the "Royal Baby's" belly, throwing all your clothes over the side 'cause you'll never get the stench out of them, then running to the shower to spend 30-mins trying to get all the peanut butter, oatmeal, and sour cream out of your ears and hair. Hopefully, my days of being a wog are long behind me. I'm untouchable, unless we cross into the Arctic Circle... very unlikely! I'll be sure to tell you all about it.

Well, I should go. It's late and I may be busy tomorrow. I have insurance policies to void and other things to tend to.

As you can see, we've been nowhere, really. Normally, these southern patrols bring us ports in Acapulco, Mazalan, and Puerto Villarta, Mexico (may have goofed spelling). We were scheduled to pull into Manta, Equador. That didn't happen. Some say our operation necessitated an extension... some say it was never going to happen in the first place due to force protection issues. No one really knows... and that's probably not a bad thing. Even an upcoming port visit that "can't be cancelled" could be cancelled if our operation dictates it. A good sailor learns to be flexible and not expect things like liberty ports. A better sailor does it without becoming a grouch about it. ;-) Previous patrols on another Cutter have taken me to Equador, Panama, Columbia, Jamaica, Curacao, and others. Visit my homepage (link below) and check out my Coast Guard Page for more.

I know I didn't answer your question. But perhaps you understand why. I will continue to work on the Newsletter. Any information that can be sent to me will be beneficial.

I can't help locate the EarTalk, as I bought mine (mail-order from Jun's Electronics in Los Angeles) about a decade ago.

However, I can report that I'm quite pleased with the product and it seems to work well. It will NOT eliminate background or wind noise, however, and you will get reports that your transmit audio has a bit of a "hollow" sound (similar to someone using a speakerphone).

An article I wrote (http://www.lafetra.com/skip/AA6WK/Articles/CQ-VHF/April-1998.htm) shows my setup, although one photo shows me with a boom mike -- the others show using the EarTalk.

I use the earlier Kenwood series of handhelds on the bike (TH-26A, TH-77A).

286. RAGBRAI Route for 2002

Yahoo group: BMHA
Date: 2002-02-05 16:53:22 UTC
From: nf0n
Topic: 286 Message: 286

Here is the overnight town route for 2002 RAGBRAI (Registers Annual Great Bicycle Ride Across Iowa).

Dates: July 21-27

Starts at Sioux Center, Iowa
Cherokee
Emmetsburg
Forest City
Charles City
Oelwein
Anamosa
Bellevue

If anyone is interested in riding with the "Megacycles Team" please contact me and I can arrange. Openings are limited as always.

For more details, look at http://www.ragbrai.org

RAGBRAI is the largest organized ride and this will be the 30th year.

Also, Iowa is not flat.

287. BikeE HF System... comments after a month of HFing

Yahoo group: BMHA
Date: 2002-02-20 04:32:23 UTC
From: xtalradio
Topic: 287 Message: 287

A few comments from a "renewed" HF bike operator... and a description of my recently built system after a month of operating fun.
I like my BikeE as an HF /Human Powered Mobile... it puts the rider in a good position for radio operation while simultaneously maintaining control of the bike. [Because the Bike-E is not as "laid-back" as other recumbants.] I also find it much easier than a standard bike for radio operation... but the standard bike is, of course, more efficient peddling uphill.
Although I operated a CB radio from a bicycle as a youngster (many years ago), I have recently become a bent HF bicycle-mobile enthusiast (guinea pig?). I just had my first HF Bike-to-Bike CW & SSB contact with Mohan VE7FM (also bent) last weekend on 18157.5kHz (HFpack). I've also had many many HF contacts with pedestrians, bases, mobiles using this system from 40m through 10m on HF; as well as 2m and 440.
Here is a description of my BikeE HF system:

My /HPM system:

BikeE "recumbant" bicycle Model AT with fairing (windshield).
Rig: FT-817 on handlebars mounted in front water-bottle bracket. The Mountain-Ops nylon FT-817 case provides rig padding and good spring fit for the rig in the water bottle bracket. Velcro strips secure the rig into the bracket and provide easy removal when needed. It's almost as if the FT-817 was made to fit in this water bottle bracket!
Power: Internal NiMH AA (R/C pack), good for 2 hours. I keep a spare pack in the pannier bag... good enough for 4 hours continuous SSB operation at 5W. Considering adding a bigger battery system, but the internal battery exceeds my present requirements for local cycling.
VHF/UHF antenna: ducky on the FT-817 top BNC.
HF Antenna: SuperAntennas MP-2 mounted on tail, 45degree slant; 3/8-24 antenna mount is a modified (bent) Iron Horse stainless steel car trailer hitch mount, attached to the BikeE frame using 2 BikeE frame accessory mounts. A short piece of 1/2 inch copper braid bonds the mount ground to the BikeE frame. The MP-2 has the mobile stainless steel whip stinger on it, with a section of orange flagging tape tied to the tip of the stinger. The MP-2 up/down control is a small switchbox mounted under the BikeE seat on the pannier rack containing two 9V batteries in series. The frequency and band can be tuned for SWR while in motion.
The metal frame of BikeE (and the rider's body) is the antenna counterpoise. I find that on 20m~10m the antenna system is favorably directional toward the front of the BikeE, similar to the antenna effects common in automobile mobile setups.

I notice only a slight difference in the inertia of the steering with the FT-817 mounted on the handlebars. Not a problem at all. I'm

working on an adapter for a hands-free mic on the helmet and PTT on the handlebar.

288. HFpack, HF Bike Mobile, On-The-Air Schedules

Yahoo group: BMHA
Date: 2002-02-20 04:56:31 UTC
From: xtalradio
Topic: 288 Message: 288

HFpack, the HF Portable Group, has on-the-air activity which is perfect for HF bicycle mobile and invites BMHA to utilize the HFpack calling frequencies.

HFpack always gives priority to pedestrian, bicycle, portable, and QRP operators. Bases and mobiles of any power level are also welcome to join the fun.
The primary calling frequency 18157.5kHz is active at all times of the day, 7 days /week. There is more daily activity presently for the 22:30Z group in North America. The Saturday schedule is global and usually has about 40 or more operators on the air worldwide at any given time. Sunday is also a big day for the HFpack. There are usually some base stations on the weekend who help keep the frequency clear for the lower powered stations.

HFpack Schedule
Daily
22:30Z = 18157.5kHz USB (CW= +700Hz)

Saturday
16:30Z = 18157.5kHz USB (CW= +700Hz)
17:00Z = 14342.5kHz USB (CW= +700Hz)
22:30Z = 18157.5kHz USB (CW= +700Hz)
23:00Z = 14342.5kHz USB (CW= +700Hz)

There are HFpack calling frequencies on every ham band.
If 18157.5 is busy, we QSY +/-5kHz to 18152.5 or 18162.5

For more information about HFpack and the HFpack frequencies:
http://www.hfpack.com

http://www.qsl.net/hfpack/images/hfpack_logoclock.gif

Hi, my name is Jerry Felts, call is NR5A and I just joined this group,and I'm in south Dakota. I need a fun way to get excercise and have always liked bike riding. Last April I had a 4-way bypass operation, and because of dibetics had 2 1/2 toes amputated on my right foot. I can walk for excercise but bike riding would be alot more fun. I'm active on the HF Pack group and have gone pederstrian moble a couple of times now.

I've been eyeing bikes in the stores now for a couple of months. Any type or anything I should look for on a bike? I'll be going after a mountain type bike I think. Probably one of the Wallyworld types since its all I can afford. In looking at some bikes in a few stores I couldn't believe how much you can spend on one. Please give me some guide lines on what to get in a cheap bike. hi hi

First off, I'm only interested in HF type of operating. I'm wondering what bands work the best from a bike, probably the higher bands. My rig is a FT - 817 and I have both a 4ah and 7ah 12 volt battery to power it from. What is the prefered antenna to use? Hamsticks? I've got a lil PW-1, and a 17m Hamstick, also got a Z-11 tuner, so I've pretty much got the gear. How does mounting something like a Hamstick on the back of a bike affect its riding?
I think trying to work WAS on a bike would be fun, has it been done? Think maybe I'll try.

Ok last question for this time,how do you guys do your logging while riding? I like to keep a log on everyone I work.

Thanks for you time guys, this is going to be fun!

Jerry - NR5A - South Dakota

To me, buying a cheap bike is alot like buying a used car. The less you pay, the more likely you are going to have problems.

I'd say, figure out what you want to do first. Are you going to be riding alot off road, or is it going to be all on road riding? I've found that cheap mountain bikes fall apart once serious off road riding is done. So, if you are thinking about doing some off road riding, a cheap bike might last long enough for you to figure out if you really want to get "serious".

Now, a mountain bike has some nice advantages over a road bike, even if it never goes off road. One, the sitting position is much nicer, and the handlebars seem to be better. I know they have some nice touring bikes [I think that is what they are called, you know, the ones that look like the old three speed bikes], which probably are really sweet for road riding. Two, the frame is heavier, can take some more weight, etc. Maybe top end road bikes can do that, but at low cost? I don't know. Third, if you have to hit the ditch, because of some fool driver (or there is no shoulder on the road), a mountain bike will keep on going when a road bike bogs down.

Now, those large tires will slow you down. They do make some good on-road mountain bike tires--is that an oxymoron?--but it will be a compromise thing. More air in the tires = worse ride (bumps hurt more!). But to tell you the truth, I'd go for the mountain bike anyhow.

Now, price. Spend more, and the bike gets lighter. Lightness is important. You will notice 10 pounds here on long rides. Also, the lighter the wheels are, the faster you can accelerate, and the less work it will feel like. Next up, brakes. Brakes are getting better all the time, but cheap bikes have cheap brakes. Lastly, and most important, shifters. Road riding will call you to shift alot. Sometimes I imagine myself to be a big rig truck--one that has to shift alot to get maximum performance. [New England has alot of hills.] Cheap shifters are grating to the nerves.

Don't knock the expensive bikes until you ride one. You might find that the extra cost is worth it! After all, if you had to drive alot (commute or travel), would you rather have an automatic car with air conditioning, cruise control, etc; or a really cheap one that maybe saved a few cents on gas?

Lastly, one of the greatest things I have on my bike is a 6 gallon milk crate mounted on one of those bike racks. I can just thow stuff in that box, and never carry a backpack. The weight is a bit high up, but can't beat it for biking to work.

Actually, bike season is coming up, isn't it? I recently acquired an excersise bike, with the hopes of getting ready for the new season. It is some older bike, with a fan for the resistance, and the handle bars move too, presumably to get a better workout. My problem is, it seems to bother my upper back the day after I get a few minutes in. I haven't been on it since. Has anyone else had a similar experience? Maybe I overdid it, need to warm up a bit before I do long times on it? I just want to get into good enough shape to start biking to work, which is a 6 mile or so ride, with several good sized hills.

While I agree 100% with what Shawn says, I think he left out one bike in particular that is growing in the ham community. Maybe it is the fact that you sit naturally, or that you are not straining your neck to look forward.. However, a recumbent bike might be something worth looking at.

Sure, they are a bit more $ than the standard WallMart bike, but Shawn did a great job explaining that issue of 'you-get-what-you-pay-for', so I will not re-hash it.

One thing that Bonnie, Pres and others have realized is that a small wheel base recumbent is not *all* that expensive. You can get a decent entry class bike for 5-$700. Plenty of room for radios, you get stopped and asked plenty of questions (and possibly increase the ham population) and above all they are comfortable!

I know that there are some upright and Mtn bike riders here, and I do not wish to offend them or turn this in to a "which bike is best" flame war. I just know that I cannot finish my 15 mile work loop on an upright bike without pain. Back, butt and wrists just screaming at me to stop.

On the recumbent, not only can I finish it, but I can ride the loop again before I start to feel any discomfort.

I urge you to look around at several different bike shops, (recumbent and non recumbent alike) before you make a decision on what bike you want to ride. Go for demo rides, sit on the seats, and kick the tires. Heck! You might end up on a trike!

In closing: If you are not comfortable, you are not going to enjoy the experience. The bike will end up in the garage or the basement as an good idean gone bad. So take you time and do some research on what you want to do. Trust me, bike mobile operation is ALL about the experience of doing it 'your way'.

Gary,
I have had a great deal of luck with a boom mike/clip on headset that clips behind your ear instead of using a headset that has a support that runs over your head and under your helmet. It's made by Pryme and I'll include the website link below. It has no problem at all with road or wind noise. I can mount the in-line PTT switch on the handlebars and it leaves me enough wire to run to the radio and my ear. I use a Kenwood th-d7 handheld (the headset that works with the D7A also works with the F6A) attached to a water bottle cage that I have zip-tied to the area out in front of the handlebars.

From: Rick D Garrett
Topic: 301 Message: 301

Hi, all, sorry for posting so much the last couple of days. :)

What are the various options for mounting an HT on your bike? I need something that will allow me to move the HT easily, as I often use it when doing Skywarn activities, and I do only road and Greenway riding, so off road riding isn't a consideration.

Any help is appreciated! And, I got my mount ordered for my GPS today. Again, thanks for the help!

No worries here. That's what the list is for. :)

> What are the various options for mounting an HT on your bike? I need
> something that will allow me to move the HT easily...

My current method is the use the mounting pieces from an old Cateye headlight, the $15 lights. I made a little pedestal out of plastic and glued it to the piece that was formerly attached to the headlight. The other piece, as before, is mounted to the handlebars. The HT is secured to the pedestal with Velcro. The whole assembly slides into the mount, just like it did when it was a headlight. Pictures can be found in my folder... KE4WMF.

This setup maintains the quick release feature and is very durable. I'm a very rugged rider. My full-blown ham station has been through large rock gardens and even seen a few good crashes. Nothing has broken. I love it!

Take Care,

I simply hose-clamped a piece of belt across my stem with a hose clamp on either side of my handlebars, and use a toe-clip strap to snug the radio down tight to the stem itself.

The option that I use is to mount the HT on my belt, not the bike. While I
would mount a GPS on the bike I would not mount my HT on the bike. Too
much vibration. Eventually something will break. GPS's are built more
robust than HT's.

I know other folks *have* mounted HT's on the handlebars without any
problems (everyone rides on different surfaces, at different speeds) but I
won't do that.

If you do want to go with the Garmin one, it's $21.00 at Bronco One Electronics in Phoenix. Says he is one of the largest Garmin dealers in the country and does much of their Beta testing. Anyway I saw it last night and it quick dismounts easily. Keep in mind it's not Industrial strenth like the Ram, so if your doing serious mountain biking (or acrobatics hi hi) I'd stay with the Ram. I'll prob go with the Garmin and a quick, homemade velcro tether, all of which will remove quickly. If you want the Garmin model just tell Allen at Bronco one, "Tim from the Sheriff's Posse" sent ya and hopefully he will stick one in the mail for a small shipping charge. 602-992-2016 is his phone. If all that doesn't work out, and you still want the Garmin, reply to me, I'll stop by and stick it in the mail for ya. Tim (TEatonaz@... - if that rejects it's just cause the mailbox is full, try back in a day or two.)

From: Jim Hall
Topic: 309 Message: 309

Has anyone played around with solar or wind power to keep the batteries hot while riding? I only run vhf/uhf from the bike and I am trying to think of ways to keep the spares charged on long rides or all day club events.

I used a 12", 5 W panel bungi corded over the back paniers to charge
a 12v 2.5 AH gel cell while on a month long tour. There were two of
us. Each bike had a similar setup with a HT in the handlebar bag running
off the gel cell. We'd take turns carrying the panel to charge up the battery.
Worked great.

With the bungi cord setup, it was possible to put the panel on the the side of the
bike getting the most sun.

Be aware that running an HT off a 12 volt battery can be harmful to the battery.

Most HT's will run just fine on something like 7.2 volts. If you drain a 12v battery down to 7.2 volts you have seriously shortened the life of the battery. A 12v battery should not be drained much below 11 volts (some say 10.5 is the minimum) Many HT's will continue to operate well below that point. If you are operating under a *real* emergency, with no other source of power ... that is one thing .. but for "normal" use you must monitor the battery voltage somehow in order not to damage the battery.

Some HT's have a 12 battery pack as an available accessory. Those that do must somehow be able to sense the battery pack voltage and know when to stop working so as not to overdrain the pack. I'm not sure if this protection is available for 12 volts applied through the external power jack.

For my lights, I use my dynohub with a bridge rectifier. You can use an IC chip (I forget the number but can get it for you if you like) that can convert the 6V DC to 12V DC with a very high degree of efficiency. Other than that, I've never had a problem with battery life running my HT off a 12V 7 amp/he gel-cell.

313. Need help: Touch sensor keyer on bicycle

Yahoo group: BMHA
Date: 2002-03-28 11:26:08 UTC
From: dl3naa
Topic: 313 Message: 313

Hi!

Has anybody experience with sensor morse keyer on bicycle? I recently build the kit from Kent Electronics and it works very fine but when installing it on my bike for use during riding I have problems because of the capacity of the handlebars. I can easily use it holding in my hand (while resting :-)) but it sends permanent when putting the keyer wires parallel to the metal of the handlebars.
Any idea how to solve this problem?

73 from Kehl (5km east from Strasbourg at DL/F-border) and a happy easter-holiday to all!

Thanks for the input guys. I guess what I'm looking for is some overkill. In our local ARES group, we use our bikes a lot so I am just looking for a way to not have to stop as often to charge batteries. What I am thinking now is to get good high rated cells and build up a water bottle pack that will run a few days with lots of use before needing a recharge. I will probably stick with 7.2v; I know the radio "works" at 12v, but it sure does get hot.. I also ride in some of the charity rides that local hams do the comms work in. Those are usually 2 day events also so I like the overkill on the batteries.

Topic: 309 Message: 316

The reason HT's get "hot" when running on 12v is not that they are running on 12v, it's that they are running "high power" (5 watts) HT's have no finned heat sink to dissipate the heat that is generated so the case gets hot. If you run an HT on low to medium power while connected to 12v it will not get hot. If you *need* the extra power to get through *then* you can switch to high power.

A popular mount up here in the willy wags of Maine is the Garmin
handlebar mount for the GPS12. Cost was something like $18 which
includes a mounting ring for the handlebars as well as a mount that
attaches to the back fo the gps or the ht.
It handled over 1000 miles last summer without a failure.

327. Dayton or Bust! QRP Bicycle Mobile

Yahoo group: BMHA
Date: 2002-05-07 03:56:04 UTC
From: VE3JC - John C
Topic: 327 Message: 327

Well we had so much fun last year that we just HAVE to do it again!

Russel KB8U, Ken VE3ELA, and John VE3JC are again planning to bicycle from London,Ontario to Dayton, and will be operating QRP Bicycle Mobile along the way!

We're hoping the trip will be as much fun as last year, but with MORE band activity and LESS rain! We will be using much the same equipment as last year (see http://www.geocities.com/ve3jc/to_fdim.htm or last July's QRP Quarterly).

Listen for us on the usual QRP CW frequencies, beginning Saturday morning (May 11), especially during daylight hours. If the weather cooperates and our muscles aren't too sore, we hope to do some evening campsite operating as well. We also expect to be passing near Campbell Hill, the highest point in Ohio, on Tuesday afternoon, so we may try a bike mobile "top of the world" Adventure Radio Society conquest.

Looking forward to seeing some familiar faces at Dayton.

By the way, for those worked us last year, I'm to blame for not getting QSL's out. I've now printed commemorative QSL's, which Ken and Russel can help me fill out at a campsite picnic table. So if you work us this year, I'll make sure you get a matched set!

72, John VE3JC

330. 25 watt xmtr from bike possible ?

Yahoo group: BMHA
Date: 2002-05-07 13:14:18 UTC
From: KF5ND
Topic: 330 Message: 330

Hello all,

Here in the wide open spaces of Texas, we often need 25 watts of xmit power and a gain antenna on 2 m FM in order to support the various long-distance bike rides, like Houston-Austin MS150.

I'd like to be a bike-mobile ham operator on these rides and actually have enough RF power to participate seriously, but I can't for the life of me figure out how to get enough 7 - 10 amp-hours of deep cycle battery on my bike at reasonable weight and cost. "D" sized NiMH cells cost $12 each, so a pack of 8 will be $100 !

I did recently tried to use a 3.4 amp-hour gel cell for this application, but the deep-cycle, high current drain killed it, it's dead now.

Has anyone surmounted the 25 watt barrier yet ?

73,
Pete KF5ND

I use a 7 amp/hr gel-cell for my 25W headlight and get 3+ hrs of run-time out of it. I also have some 17s that would go even longer, but at a corresponding increase in weight. Not sure how much they are new, but I get mine out of computer UPSs when we surplus them from work.

Topic: 330 Message: 332

You say you've tried high gain antennas--what kind of gain? Most of them require a groundplane to work with; I wonder if you try something like a 3/2 wave antenna--something that does not require a groundplane. Maybe even a director/reflector would help. Well, not a beam, but some sort of easy to rotate clip on object.

If I recall, Texas is a bit flat, so height shouldn't be much of concern, should it? Maybe elevating the antenna as high as you can on the bike, would help.

What would NiCAD D cells cost for the application? Less life, but maybe cheaper? Or, what about buying NiMH like you said, but get the AA versions--make your own pack of 4 parallel 10 series strings. My guess is that would still be 80 dollars, but I don't think you can get 8-10 amp capability elsewise, without the weight of a heavy lead acid. Besides, NiCAD/NiMH will work better in a high current application anyhow. And, if you try the AA version, and it doesn't work, well, you can always sell those batteries cheap enough to other hams.

Check out the maritime super-J antenna in the ARRL antenna handbook. 2
stacked 1/2-wave sections fed through a J-pole matching stub. Just need to
make sure you can fold it easily for transporting the bike.

Maybe instead of using copper pipe, you could try a twin-lead version. Afterall, there is the copper pipe J-pole, and the 300 ohm twin lead J-pole. Same idea, should be similar in performance.

I bring this up, as a suggestion--I'm not sure on the height of a super J, other than to guess that it would be on the order of 8 feet. Anyhow, one could use 3 or 4 sections of pvc, 1/2 diam or so, and use some of hte pvc couplers, without glue. Then you could twise the sections together, and it would hold fairly well.

Now that I think about it, 8 feet tall would give problems with swaying--it would tend to push the bike around a bit, and mess up the balance. You might have to use a regular whip on the top element, rather than go pvc all the way up. That might help keep weight down on the top of this kind of antenna.

I once tried a J-pole on my bike; I left the HT in the box, sitting on top of a sweatshirt for shock absorption. Still had problems with the mechanical jarring to the radio. The J-pole was in 3 or 4 feet of 1/2 inch pvc (whatever length it needed), loosely strapped to the bike. I don't recall having problems with it messing up my balance, but I was also used to the bike being unbalanced--at the time, I was occasionally biking two weeks of laundy in my bike basket a few miles to school to do laundry! Talk about un-balance!

But I don't know how 2x that height would do.

Check out the maritime super-J antenna in the ARRL antenna handbook. 2 stacked 1/2-wave sections fed through a J-pole matching stub. Just need to make sure you can fold it easily for transporting the bike.

I've only used J-poles attached to safety flags on my bike, so didn't notice any difference in balance. As for mounting, I hose-clamped a piece of belt to th handlebars and across the stem and hung it by the belt loop with a thick piece of foam behind it and a toeclip strap to secure it.

For more ideas on collinears, check out http://www.tfn.net/~gfloyd7/antenna/ - you could turn the tuning stub at the bottom of that at a 90-degree angle and mount it to a flagpole for a height of roughly 6-7 ft.

Pete,

Maybe a combination of things like the battery, solarcell, and this device http://www.onjapan.net/2001/hamfair/ja3ckf.html . Yes I am being a little flip but it would work to keep the charge up on the battery.

If you want ready made on the antenna, Maldol/Comet makes a NMO groundplane base for mounting their collinear car antennas on towers and roofs. This combination could be mounted on a wood dowel or metal pole and clamped to the bike so that it was above your head. Another choice would be one of the marine antennas like the maxrad MMA-1443 129" tall no ground plane as it is designed for fiberglass or wood boats.

Hi Pete,
I was reading some of the responses you got regarding antennas. There is a J pole design in cpvc that works well called the jurasic duck designed by wx2nj I believe it was. There use to be a website for it but I can't find it now. I used it on our local Tour de Cure for the diabetes assoc. here through the hills of tn and it worked well. Also, its only 57" tall. Its shorter than normal because the pvc capacitance causes you to have to shorten it some. I will keep looking for that website.
Also, is there a website regarding the 2003 ms150 down there and is a pretty flat ride? That might be something I would like to ride in.

Nice antenna, Jim! I have used a 300 ohm twin lead J-Pole on my bike mobiles in the past. I would use O-rings to attach the twin lead to a fiberglass bike flag rod. Your design is great since it encloses the connections. I used silicon sealant to seal mine. Having a threaded fitting is good for quick disconnects.

I just emailed with Mike NF0N who is graciously trying to accommodate me to speak for a couple of minutes at the BMHA Forum on Sunday morning. I will talk about the rapidly expanding number of active HF bicycle mobile operators, how it is related to the present growth and future of the HFpack movement.
There will be a large number of HFpack members at the BMHA forum, as well as before and afterwards in the hallway.
The HFpack frequency for Dayton is 28327.5kHz USB.
There will be a special Dayton HFpack Pedestrian Mobile Net on Saturday at 3PM. Everyone is welcome to participate.

Hi!

I have made very good experiences with the kent touch keyer. It come in a small kit. If you dont have any moveable parts there is also no problem to loose anything or to have problems with springs on bad roads. You can find a picture on

I've been using the Palm Paddles on the bike for a year now - absolutely delightful to use. I don't have any pictures yet, but basically built an extension to the handlebar-mounted rig platform, and mounted the palm paddle clip-on base to this extension. The Palm paddle can then easily be snapped on or off as required, and of course retracts into its shell like a turtle when not needed.

And at Dayton last week, our German Palm Paddle friends introduced a small cube keyer that fits on the back of the Palm paddle, if your rig does not have an internal keyer. (A bit pricey, but awfully cute!)

The Palm really has an excellent feel, on the bike or in the shack.

By the way, three days of continuous rain ruined our bicycle ride to Dayton this year (we gave up in Findlay Ohio, about 200 miles into our trip). Coincidentally, the sun came out as soon as we packed it in!

From: jtwoodstock
Topic: 351 Message: 351

Last year I took up cycing again after quite a number of years. Put in 1000 miles and am at the 240 mile mark so far this year. My local bike club is having a "Bike Boat Bike" ride next weekend and they are looking for Hams.. Since I was going to be riding, I thought I would try Bicycle Mobile today. It was great.

I wore an old HT I have on the belt of my fanny pack and I clipped the small microphone to my shirt..

Wind noise in the mike was pretty bad while I was cycling.. I am also concerned about battery life.. The ride will be 4-6 hours.. (I'm hoping it is closer to 4 <grin>..

I could use some advice on two things:

1) What is the best microphone/(earphone/headphone)?
2) What HT has a good blend of Reliability, Power and Battery Life? (I need a 2M/440 rig)

I am not planning to mount an antenna to the bike at this point, I am planning to stay with the whip on the HT.

Hello, My name is Hugh W4FBI and I am in the Charlotte area, I am looking to get a Recumbent Bicycle to ride, and would like to do a VHF/UHF antenna set up on it. But first I need to find a bicycle. I know nothing about the Recumbent line. its be 20 + riding a bike. My wife took her test in Lincolnton on june the 8th and wile wating on her to test I wet out side and as luck would have it, there was a bike shop there. called Ride-A-Bike bicycle shop. and they had recumbent bikes, and they sell bikeE brand. I was looking at the model ct and just found out on line they make a ct/xl. which i did not find out at the bike shop. the guy wayne new nothing about the recumbents, he was the BMX guy. and the owner Chafin was out on a group ride that saturday. so got no info on the bikes. did get in touch with chafin though this week and I am going back to Lincolnton to look and find out more on these bikes. I need to find out from others about the recumbents for I am sure Mr. chafin will tell me that the bikeE line is the only bike to get, for that is the only line he sales. I am 250lbs so need a sturdy bike. So if you could give any in put or if you know of any groups with Recumbent bikes that meet, I would like to go to one of the meets and look at some of the recumbent's they ride. and ask more about the bikes. again thanks for any help. (ps the wife passed her test :)) Hugh listed on www.QRZ.com for more info.

356. Field Day HFpack Freq Clock Experiment (JUN22/23)

Yahoo group: BMHA
Date: 2002-06-15 20:27:31 UTC
From: xtalradio
Topic: 356 Message: 356

Field Day HFpack Freq Clock Experiment:
1600z~1800z Saturday 22 June,
2100z~2300z Sunday 23 June.

Operate using the HFpack Freq Clock
for 2 hours before Field Day starts
and again for 2 hours after Field Day ends.

Open to all operators, not necessary to participate in the ARRL Field Day event.

HFpack Frequency Clock:
Minutes Past the Hour/ Freq(kHz) / Mode
=:00 / 14342.5 / USB or CW
=:10 / 3997.5 or 3687.5 / LSB or CW
=:20 / 28327.5 / USB or CW
=:30 / 18157.5 / USB or CW
=:40 / 7242.5 or 7087.5 / LSB or CW
=:50 / 10137.5 / PSK31 or CW

A graphic image of the HFpack Freq Clock is available for your easy reference and convenience while riding.
Click here:
http://www.qsl.net/hfpack/image/hfpack_logoclock.gif

The objective is to get a large number of Bicycle Mobile and Pedestrian Mobile operators on the air for this experiment. One of the motives is to show enough interest to justify adding 2 new Classes (categories) to Field Day: Human Powered Mobile and Pedestrian Mobile. Your reports and comments on BMHA or HFpack egroups after the experiment are appreciated. Please print this message for use on Field Day.

>

I have a BikeE CT and am disappointed in its lack of strength. I am 6'2", 215lbs. The "short" frame model IS sufficient in length, but I have 3 issues with the bike so far.

1 I usually have some weight (about 10 lbs.) in the front: a 7AH gel-cell and an FT-817 radio mounted just behind the steering column. One day I did not have them present and the lack of extra weight in the front caused me to overpower the bike, I did a wheelie and flipped the front up in the air, then I fell over to the right. The ensuing flop on the ground (not much more than a slightly bruised elbow to me) caused the right-side pedal crank to be bent. $50 for the complete set.

2 The kickstand is flimsy and bends under normal use. I think a double-prong motorcycle stand would be better.

3 After having the unit in for the seat recall I noticed the seat felt distinctly twisted. Upon further inspection the entire tube-frame that the seat slides on, was bent to the left. Unscientifically, I yanked the seat back into straight, but not perfect, alignment. It appears that maybe the bike was tipped when in the shop and the sudden stop on the seat bent the frame.

Now, you may observe that 1, and POSSIBLY 2 of the 3 problems I mention were due to trauma. True enough. But I have a 17-year old Schwinn conventional bike with nary a bent piece on it after ordinary wear and tear, and I am sure in those many years there was a crash or tip here and there. And its kickstand and frame and pedal crank are as straight as new. (And I have never done a wheelie-flip on the Schwinn, but the rider's weight is not all in the back like on the recumbent.) I believe the aluminum used all over in the BikeE is made/designed/whatever much too weak. I now consider the BikeE CT to be curiosity but not a "real" bike. And I am hardly a serious rider. Occasional short trips. I would give serious pause to taking the BikeE on a long trip without support.

Happy Father's Day, Dads and sons and daughters!

Thanks

Topic: 354 Message: 358

I've also a BikeE CT - the XL version (from 1997). I'm about 6'3", 215lbs as well. While the length of the standard version may be sufficient for the seat-pedal distance, having the XL version keeps the weight on the bike more centered & puts a bit more weight on the front wheel. Under hard acceleration uphill, I can make the front wheel come off the ground, but only just. I've never pulled a wheelie like Pres described. The kickstands can be a little loose - this has been a common problem as described on some of the BikeE lists. Most people just squirt a little locktite into where the kickstand bolts on. I just really cranked down on the bolt & haven't had problems since. As for sturdyness, I've at least a couple of thousand miles on the bike, as well as one accident that put me into a leg brace for a couple of months, and the bike is still going strong. The only thing that hasn't gone well was the original Primo V-Monster tires - the sidewalls failed twice. I went to a Comet up front & a Hookworm tire in the rear & have been happy with them.

The bikes have a rectangular frame with a lip on the top - BikeE sells generic clamp mounts for attaching things to the frame. I used one for attaching a dual-band mobile antenna to the rear of the bike, with the antenna cable routed to the handlebars for a VX-5R. I've also adapted one of the clamp-style cell-phone holders to one of these mounts, and used it to attach a GPS to the frame between the handlebars and the seat.

- Tom Cronin

Thanks for the in put on the bikeE Bicycle's. the only dealer I can find at all for any kind of Recumbetn bikes is www.rideabike.com and they are in Lincolnton. I still have not got to talk to any one yet about them for the owner chafin was out on a ride. I drove all the way up there and the guy on duty was a kid and he worked on ther BMX kid bikes. new nothing about the Recumbetn. there was about 7 Recujbents on the wall and he could not tell me what model was what or give me a price range. So dont know how this dealer is. I know that he will try to tell me that bikeE is the best that is why he sells it. I have fell for that line two meany times. I am now lots older (54) and dont fall for that any more. looks like its going to be next spring before I can get one. so I am going to do some looking. I need to learn were there are meets and groups that meet to ride ETC: This way I can see there bikes and what they like ro dont like and were there dealer is. So if any one knoes of meeting places please let me know. I Though for sure Myrtle Beach would be a great place or down around the beach ETC: great places to ride. but cant fine no dealers, and for that I cant find no one in that area. So if you could help me with were they are holding meetings / Rides / state meets, I will go to these and look at all the kinds and talk to people and learn what is best for me. I have cancer and the doctor says I need one to ride and I should live much longer by riding at lease 5 miles every other day. I cant ride a reg bike, it has to be a Recumbent for the wide seat. if it was not for the seating I could ride a reg bike. But again Thanks for you in put and all your help .

As of right now the only other bike I know of (which I posted as the R40) well it was not that , its the XL-Velocity from www.rans.com which I saw on line that a ham was riding and doing around 2,000 miles a year on rides. for get his call. his wife has the bikeE CT and she rides only 3 times a week around 5 miles a trip max 10 miles. My self I am 6ft and am 240 lbs. and I cant find no dealers in my area for the XL. Maine/ PA /Michigan is the only 3 dealers on the east cost I can find. Now I need to find out about the R40 for I got some e mail on it for some people saying they ride it. just need to see if I can find a dealer. Again Thanks again for all your help, for I have to make the right choice the first time, I just cant be trading up for I got the wrong bike the first time. This will have to be a one time buy for me. if I get the wrong bike I am just stuck with it :(
again thanks every one, Hugh W4FBI Charlotte, NC

thanks for all the in put. I found a dealer for Burles and they have a dealer in Charlotte, NC and found a Vision R40 dealer in Hendersonville, NC about 2 hour drive from me. at this time the Vision is really looking good but want to check the Burles but they look bouth about the same. never seen one with the stering below the seat. wonder how that will work with ham radio! going to check these two dealers out. again thanks to every one for all the help with brands and you in puts on your bikes. looks like its going to be spring of next year before i get one so got time to look and test. again if you know of any bent bike meets or jamboree's ETC plesase post them or e-mail them to W4FBI@...
NOTE: I am droping AOL soon and moving over to Road Runner. so the w4fbi@... will send it on to my new isp. Thanks Hugh

Under-seat steering describes the bike configuration where the handlebars are mounted beneath the seat. This position is very comfortable, since your arms are hanging in a relaxed position. The inherent width of the under-seat style also leads toward very gentle handling characteristics.
This is the add I saw on line. any one got a in put on this top or bottom sterring. thanks Hugh W4FBI

I vote for Under-Seat-Steering USS. You get an unobstructed view of scenery ahead. Having nothing in front of you while you ride is an experience unique to recumbents.

I found the Bike-E's little skinny handle bar to be very jittery and unstable. Having a radio mounted there might be very awkward.

Be sure the bike you get has threaded holes for a rack mount.

Kevin

Hello to all,
I got a Bikee NX last week from a local dealer. The bike rides great and I am very happy with it. I'd like to hear from other Bikee owners (and any others) on how they setup their mobile station. If you would have changed your original installation please include the details.
I have a Yaesu FT-817 and hope to be active bicycle mobile by the fall. I figure I'd use the 17 meter hamstick to start. I've seen that there is a mounting accessory for the Bikee and would like to use something like that for mounting the antenna.
Thanks for your help in advance.

The GPS3 should hold up fine, but I'd be *real* leary of mounting the other two actually on the bike. The GPS is built to withstand shock, but the Palm, not the HT are not. I'd bet the Palm would be the first to go and eventually the HT. Others have mounted radios *on* the bike without problems, but everyone rides different roads. Personally, I would not do it.

370. Setting up a mbile station

Yahoo group: BMHA
Date: 2002-07-06 15:30:44 UTC
From: Pres Waterman
Topic: 366 Message: 370

I have an FT-817 and GPS and a 7AH gel-cell on my BikeE CT. I have a long strip of Velcro-brand velcro all along the flat top of the frame. The gel-cell velcros to the frame.

BikeE makes an accessory bracket. Then, http://www.ram-mount.com makes a small round base that screws to it, with a rubber ball, which goes to their stalk, which goes to a flat plate, and finally http://www.mountain-ops.com or http://www.w4rt.com has the Mountain-Ops http://www.mountain-ops.com/cgi-local/shop.pl/SID=1017421163.12403/page=product.html/product=80 bracket for the FT817.

Ram-mount has a handlebar mount, which holds another mount specifically made for the GPS, and the Palm.

Yes, it's a lot of parts (all modular) but it does the job properly.

I will post a diagram called BikeE bracket.bmp into the FILES area under the folder named PRES

The antenna is on a 4-foot angle-aluminum running from the back-wheel up along the back seat. The antenna mounts to the top of the angle. I use a http://www.superantennas.com MP-1

Hi Tom and others . . . .

I am sure that BikeE range is abt the best choice for Bike/M . . .
but Recumbents don't suit everyone. My AT gives a very comfortable
and relaxed ride, so much so, that I need the Radio to keep me awake!

It was my intention when making the Antenna bracket, that it would
be for HF but I've a lot of pleasure using my handle-bar mounted
minature Alinco DJ-C4 on it's own tiny antenna to be so much fun
that HF is still to come.

I also have a TH-D7 + Garmin GPS-12 + Palm IIIx and use this with
PocketAPRS (See my website for download). When I arrive back home, I
can see where I have been (my XYL knows where I am as well) on my
shack PC running UI-View(like WinAPRS).

There are some pictures of my BikeE AT and info abt PocketAPRS on my
website:
http://www.skylites.freeserve.co.uk

Bye for now - Steve/G4MJW

Hi everyone:

If *I* ever get lucky enough to get all the stuff needed to get on APRS, I would just simply use it in the STA (Stand-Alone Tracker) mode and forget bringing along ANY type of PC.

I say this because its bad enough I have to put up with lousy drivers with their STUPID CELL PHONE stuck in their ear. In that situation, I can BARELY hold my thoughts together in a conversation while talking on my HT. A PC with an APRS setup would just be a distraction I *don't* need.

Just my $.02 worth....:-)

Hi Tom:

Since I'm a no-code techie, all I've used recently for my bike mobile setup is my HT (the Icom T81A Quad-Bander) and the dummy load antenna (anybody know where I might be able to pick up a *real* Quad Band antenna, dummy load or not?) and the local 2 meter and (sometimes) 440 machines.

However, if all goes well, that will soon change as I plan to set up a 6M simplex node up on AT LEAST one of those Windows-based Internet linking systems once I upgrade my PC. I'll be using my Icom IC 706 MKIIG as the base (with a seperate rig to control everything) and I'll use the Quad-Band HT whenever I'm out and about.

I'd like to get a Yaesu FT-817, but unless I win one at a local hamfest somehow, it doesn't seem very likely that be getting one anytime soon. :-(

I ride an adult-sized trike since I'm legally disabled and I figure that for the common areas I tend to travel, a node on ^
6M simplex ought to be enough (especially if I crank it all the way up). I'd run it 2 meters, but the band is crowded enough as it is. Plus, the main IRLP node is on 2 meters.

So, there ya have my story everyone. Hey...who knows, before long, we just might find ourselves working each other using only our HTs someday. Now THAT would be COOL!!! :-)

Cheers & 73's for now :-)

Rick -
I would have to agree with Richard. I'd take advantage of the bike for mounting a bigger antenna though. You can rig up something for the Palm by using one of the waist pack holders for a portable CD player that hangs right in front of your waist at about the belt buckle level. You have to look down farther then the handle bars, to your waist, but it saves the Palm itself from being bumped to death. I'd also keep the kenwood HT on my belt. The RAM mount seems the most sturdy GPS mount for the handle bars.
Let us know what you end up with. I'm always looking for better mounting methods. Good luck. Tim in Phx. KC7KGQ (P.S. Generous Wife!! Nice Catch!!)

Hi Gary...
I'm riding a Rans V-rex. I made a mount to go on top of the handlebar. Near the T. It just doesn't work very well. There is a lot of vibration. Same with the ant mount on the rear rack. The whips vibrate loose on the Comet uhv-6 and fall off. I suppose if the road was always smooth it might work. Might try some sort of sling underneath the flip-it with a hamstick on the back. The rex might be too compact to make it work. I love this bike so won't be changing bikes soon. (maybe the xyl will ante up for an additional ride! NOT);-]

Good luck and 73...Al WD9DKL

During the time trial, I saw an antenna poking out from behind a helmet. The aerodynamic shape of the helmet allows room for a radio.
During normal road stages, the radio is in a back pocket and the wires are sewn into the cloth of thier jerseys. The Motorola racing team developed the use of radios during bicycle races a few years ago; now everyone has them.

It almost happened to me today, except in reverse. My girlfriend called and mentioned that the race was over (she has cable at work in her cafe) and I stoppped her..told her that I wanted to see it for myself. She understood completely and said that we'd watch it tonight on OLN. Stupid me forgot that I already invited her over to my house for a nice, romantic dinner (stuffed chicken), and I don't have cable or satellite. Guess it's off to letour.com for me then to get my video fix.

Consider mounting the radio low. I had the same, above the handlebar, vibration-laden experience and I went down to the frame just behind the steering column and it's much better.

It's a BikeE CT by the way

The antenna, I went the opposite approach. I took an aluminum "angle rod" and mounted it from the rear axle up along the seat back. Then mounted a http://www.superantennas.com MP-1 and am having success.

There is a commercial on recently exactly like that.
The guy meets this girl and she invites herslf to his
house to watch a movie on cable, so he has to rush out
to get comcast hooked up.
Well, more mountains tonight. Should be a good race.
Next year, they should race with 30 pounds of radios
and antennas, that would be interesting.
Does anyone know if there is a HR special event from
the Tour?

387. Intro from Ireland

Yahoo group: BMHA
Date: 2002-07-20 19:35:16 UTC
From: George Shaw
Topic: 387 Message: 387

Folks

Just a short note to say hello. I have been SWL for some 23yrs and just got my ham licence in March this year. I am hoping to progress to a full class A when it is available in Northern Ireland (the exam that is).

The last time I was on a bike was when I was 17 (now 41) so I have a lot of muscles to find again.

I have just bought a new MTB and hope to be able to cover most of Ireland in the years to come. My pet hobby is electronics so I hope to get some interesting projects together for the bike. GPS, backpacking, HAM and engineering are added to the list of activities that I hope to accommodate.

Anyhow I hope to become an active member of this group and am happy I found it.

388. Recumbent Radio Stations

Yahoo group: BMHA
Date: 2002-07-22 04:36:10 UTC
From: xtalradio
Topic: 378 Message: 388

><Gary N9MJZ wrote><
> I would appreciate hearing from others with recumbents
> about what type they have and what they like and
> don't like about it for mobile radio operations.

I've QSOed about 5 or 6 other HF Bike Mobile operators on 18MHz from my BikeE recumbant since I got it a few months ago. In fact, the very first contact I made after installing the rig was VE7FM/Bike Mobile! All of these thrilling contacts were on 18157.5kHz SSB and CW. I'm hoping to work Ned while he's on his 600mile ride up north.

I like my BikeE model AT (with fairing) as a radio-mobile. As recumbants go, the BikeE is not quite as laid-back or efficient riding as most others. But it makes a great HF radio station! That's because of a bunch of different factors... notably, the ergonomics are just exactly right for using the rig while still riding safely. Good visibility and access. I use the front water-bottle holder for my FT-817 in front of the handlebar T. That puts it up where it can be seen and operated, without any steering or vibration problems. The "Mountain-Ops" Tac-Pack provides just the right padding to cushion the FT-817 so it fits in the stainless steel bottle holder. Mountain-Ops also has a quick-mount for the FT-817. With the superantennas MP-1 using a custom-bent stainless steel Iron Horse trailer hitch mount on the tail, I have no problem working the world on HF (especially when I run the THP HL-50B 50W amp in the pannier bag). The antenna is angled backwards at 45degrees. That keeps it from interacting so much with the rider's body. Sometimes, when I'm lazy, I use the MP-2 screwdriver... and have the control box for it mounted under the seat.

Although not absolutely necessary for occasional talking, I highly recommend a breakaway headset system. My Adonnis headset system is one that is installed in the helmet, and is made for motorcycles and bikes. I got it at one of the Akihabara ham stores (Tokyo).

Most of my riding with the BikeE is on level ground, and I usually talk a lot on the radio while riding. If I was in a hilly or mountainous area... I would ride the regular bike, instead of the recumbant. Downhill is really nice, but uphill is a battle. Personally, I've found that peddling with my head lower than my feet seems difficult!

389. Mounting bars

Yahoo group: BMHA
Date: 2002-07-27 12:27:35 UTC
From: George Shaw
Topic: 389 Message: 389

I am looking to find a supplier of an extension bar to fit to the handlebar of my MTB. The sort of thing I am after is a T bar that would fix to the handlebar at the bottom of the T and allow mounting of a GPS and Mike on the cross top of the T. I wish to mount a remote head from my 2m rig so there is not much room left on the handlebar and the T extension would be just right. Anyone seen such a device I think they were sold for mounting lights on.

Yes! The Minoura Space Grip. Use google.com to find it at a retailer.

Hello this KG4SOE and my name is Jameson. I just got back on Sunday from a 35 mile ride on the Virginia Creeper Rail Trail that is near Abingdon, Virginia. I have a Trek 820 Sport that I would like to set up for touring. Could someone tell me where to look for info on bicycle ham radio-communications? How do you deal with RF so close to you? I would like to know more.

396. Bike APRS

Yahoo group: BMHA
Date: 2002-08-08 13:20:19 UTC
From: wb4ofm
Topic: 396 Message: 396

Has anyone ran APRS from the bike?
I am aprs ignorant, but in October I will be riding an MS150 ride from Nashville to Jack Daniels and then back to Nashville (assuming I don't just stay at JD) and some of the locals are wanting me to tote an APRS setup. Any hints on doing this?
Jim

From: Richard Amirault
Topic: 396 Message: 397

First, do you currently "do" APRS at all? That is do you have a base or mobile set-up, or do you have to aquire everything new for the bike?

For a bike mobile, you would not need receive (display of other APRS stations) capability, so a "dumb tracker" is what most folks who have done it use (and many automotive mobiles as well) That means you do not need a computer, only a radio, TNC and GPS. The Kenwood D7a HT has a built-in TNC, so that would simplify things considerably if you have or can get one of those.

Would you also need/want to do "regular" bike mobile at the same time?

Hi,
I haven't ever fooled with it. The deal is that they
supply everything and I will carry it. If they beacon
only every 5 minutes or so, I think my battery can
handle it. Yes, I also have my regular comms radio
unless they can do this through the repeater that
everyone is on. If they chose to do it on a different
freq, then I will have 2 rigs to carry.

You can do it on the voice freq. with a MicE type unit such as the Tiny Trak (V 1.4, the V 2.X won't do xmit after voice.) All they have to do is have a scanner on the repeater output to recieve the signal, then digi it out on the APRS freq with the transciever. UIView software and a soundcard equiped PC work great for this. It'll save you a ton of weight, and give outstanding range on your APRS signal, all without having to do a lot of extra stuff on your bike. That's the system I use here in town for my bike.

Thank you,
Less weight is a very good thing. I will pass that one
onto them in case they haven't thought of that one. I
prefer that option also so that APRS'ers can get on
the web and follow along if they like. I know very
little about it but somewhere in this area on an aprs
freq is an internet link.

Very nice webpage. Do you have better pictures of the radio/gps mounting
plate that is on the handlebars and how it is attached?

408. BikeE Ungracefully Bows Out Of Business

Yahoo group: BMHA
Date: 2002-08-29 21:30:22 UTC
From: John K7TY
Topic: 408 Message: 408

One of the popular bike mobile platforms bites the dust....
-John K7TY

BikeE Ungracefully Bows Out Of Business

AUGUST 29, 2002 -- CORVALLIS, OR (BRAIN)--Recumbent leader BikeE closed its doors and went out of business Aug. 23, the company told Bicycle Retailer & Industry News yesterday.

The move shocked few retailers, who had been unable to contact BikeE since mid-August, when the company disconnected its toll-free telephone number and took its web site offline.

Many had been unable to order certain models since June, when the company closed its U.S. assembly facility and moved to a smaller building. Concurrently, it also reduced its orders to Taiwanese manufacturers and told many retailers it would not have fresh product until October.

Bob Brown, the company's president and a shareholder, blamed increased operating costs for the shutdown. He also said a weak post-Sept. 11 economy and two costly recalls this year played a role in the company's demise.

BikeE had as many as 30 employees but it had been trimming its staff over the last few months. On Aug. 23, it terminated its last four employees.

The company, the country's largest recumbent maker, sold approximately 10,000 bikes last year. One person close to the company estimated it had sales of $6 million last year.

BikeE turned over the collection of accounts receivables and liquidation of its remaining inventory to agents of its secured creditors, which Brown declined to name. Brown estimated that the company has about $500,000 of product left in inventory.

Brown said questions regarding receivables should be directed to (541) 738-4327, an independent agency. Questions regarding inventory can be directed to Brown at (541) 738-4390.

The move also pulled the warranty rug out from under retailers who sold the company's products. An estimated 30,000 bikes were sold in BikeE's 10-year existence.

"It really compromises the relationship between retailers and their customers," said Dirk Reitsma, owner of D.J.'s Cycles, a BikeE dealer at in Belmar, New Jersey

Brown declined to reveal BikeE's outstanding debt, but he did admit that the company had never been profitable on an annual basis.

I just started a "beowners" group in the recumbents group to help fill the void.

My Bikee NX is a great bike. I hope others will join me there to continue passing along information to other owners.

413. Tool-E Also Closing? (BikeE Accessory Tray)

Yahoo group: BMHA
Date: 2002-09-03 19:21:57 UTC
From: xtalradio
Topic: 413 Message: 413

It looks like the Tool-E will also go out of business, due to Bike-E's demise. The Tool-E sliding tray for BikeE models can be locked and it is good for BikeE mobile radio stuff. The SHOCK 911 is a spare part that takes the place of the BikeE shock in a pinch. Here is part of an email I received from the Tool-E guy.
---Bonnie KQ6XA
BikeE model AT operator

Forwarded Message follows:
Link
http://hometown.aol.com/whytoole
"As many of you already know BikeE has closed its doors as of Aug 23/02. This has left me with an inventory of about 150 TOOL-E trays in various models to get rid of. The price for any model tray is $20 plus $3.85 S&H. And while supplies last a Free SHOCK 911 will be sent out with all suspended model purchases. One per order. The SHOCK 911 is now priced at $5 free shipping. You can inform other BikeE riders of this close out by sending them my site address WHYTOOL-E."

414. Anyone worked DXCC from bicycle?

Yahoo group: BMHA

From: dl3naa
Topic: 414 Message: 414

Hi!

I just wonder if anyone already did it? I think it should be very difficult to do for US-stations but in Europe there are a lot of DXCC-countries so there should be a chance. I have worked 49 countries so far (only 20m/CW and while running QRP).
How about crating a "honor roll" for WKD DXCC?

73 from Germany!

I think a couple of guys have done it... I've got 96 countries worked from the bike, mostly using an old Argonaut 509 (around 5 watts input). Haven't really tried for new countries for 7 or 8 years now, mostly chewing the rag while cycling... I picked up an FT-817 last year, I guess I could go at hard again... I just don't have the adrenaline driving me like I did back in the 1970'-1980's... I used to be pretty much in disbelief working Moscow, Pretoria, Melbourne, etc while peddling around Wisconsin using a couple of "D" cell flashlight batteries (got a 7 Amp-Hr gel cell sometime in the 1980's)...

Hi Elroy!

Thank you very much for your informations! I already knew your homepage and I must say that I?m very impressed about your 96 DXCC-countries from W9 witrh QRP.

> I used to be pretty much in disbelief working Moscow, Pretoria, Melbourne,

> etc while peddling around Wisconsin using a couple of "D" cell

> 1980's)...

Well, it is really a problem to tell others about the possibilities one has with a bicycle station. I had made a strange experience this summer: Sitting at a park and doing some nice contacts two police-men came and asked me what I?m doing. I told them about ham radio and they were very friendly. One asked: So you use your big antenna to do contacts. Are you able to talk to people in Heidelberg (that was the next bigger town about 30 km away!). I replied that I might be not to easy (I only work 20 meter band) but I just mad a contact with a station in Norway. He looked at me and then said: "Dont try to make us silly!" They could not believe me and they thought that I would do a joke with them....

Thanks, Peter...

I remember a couple of instances like you mentioned... One was in a park, when 3 park attendants/security drove up saying that people had seen me talking from my bicycle (this is before cell phones were common) and they were concerned something might not be right with the situation... They asked me who I was talking to, but I was in the middle of a QSO on 10 m SSB at the time... They heard me tell this ham that I was on a bicycle and that I was in Milwaukee, near the Great Lakes in north-central United States... Then they heard the guy on the radio come back saying that he was something like 30km outside of Tokyo, and well, they had this look, that I can't decribe, but, well, I'm sure you've seen it, Peter... The JA was coming in quite well here, S8-S9, so they had no problem hearing what he had said...

Another time, in the early 1990's I was working 2nd shift at a company about 5 miles south of the home QTH, getting off work around midnite... While I was cycling home, I was going through a pretty nice suburban residential area, Wauwatosa, Wisconsin, talking to someone on the rig, when the local police pulled me over, lights flashing and everything... They proceeded to check me out, asked a lot of questions, ("Officer, I talk all over the world from my bicycle with this equipment...") then, I remembered that I had tucked away, in my rear pannier, a copy of the current Milwaukee Magazine, a pretty nice glossy mag that was sold around town, and the current issue had pics of me and the bicycle station in a really nice article... I pulled it out and showed them, and told them that if they wanted more info about my bicycle station, that the magazine is available at the local 24 Hour "Open Pantry" type store that was just down the road another 5 or 6 blocks. I had bought my copy there just the night before and taken it to work to show friends.

I'm not sure if I'm impressed anymore about 96 countries worked... At one time I was, but they all came pretty easy and I actually should have a lot more... And the thing is, I'm not doing anyting that is really impressive... I mean, with QRP power levels, and a tuned whip antenna, and good conditions, it just happens... Nothing really special there... It's just, I think that I was there when equipment became small enough to mount on a bicycle (if you can call an Argonaut 509 small; "light-weight" is probably a better word...)

Peter, I think I'm most proud of my HF long distance bicycle-to-bicycle contacts that I had... One (with WA4YDK) that was in the month of January in Wisconsin, which was bitter cold on my end of the contact and one (with WC4X) that also had CQ Magazine columnist Dave Ingram listening in and who talked to us from his home QTH and also

the ARRL- Wisconsin Section Manager was listening in and worked us...

Well, I guess I ran on a little long about this, but, it's good to see you doing 20m work... CW at that, which to me is very impressive doing that from a bicycle... Out of hundreds and hundreds of radio contacts I've had on ham bands from 3.5 MHz to 440 Mhz, I think only two were CW, because that's kinda tricky, to say the least...

Well, I'm on my lunch hour at work... Time to get back to work now, Peter...

73's from the U.S.A.

Reminds me also of a time (before I got into ham radio) when a few friends and I used handheld CB's mounted to our bikes. We were playing Cat and Mouse, a CB version of fox hunting, in a local park and as we were playing, someone contacrted us and joined the game. as we were finishing, this mystry person was one of the last people to the hiding place. We turned around when we heard him call and say he was in sight and saw.....you guessed it....a Park Ranger roll up (here in Hamilton County, OH, the Park Rangers are a full police department and dispatched through our county comm center). At first we thought we were in trouble, but then he asked us "okay who hides next?" and showed us his Handheld CB. We all laughed. Turns out he saw us riding our bikes around the park and flipped on the Mobile CB in his cruiser. He found our channel, grabbed his bike from the back of the crusier and joined us. Not only did we have a blast that day, and a good laugh, but we made a friend in the Park Rangers ;) Haven't been pulled over yet fro riding on the street and talking, but I'm waiting ;)

73,
Jeff

419. Have we ever thought about a VHF Net?

Yahoo group: BMHA
Date: 2002-12-28 15:32:48 UTC
From: jtwoodstock <yahoogroups@woodyware.com>
Topic: 419 Message: 419

With IRLP and EchoLink available to many hams, are there IRLP or EchoLink Nets formed to discuss bicycle mobile?

If not should we start one? Or maybe a few - We could discuss - Equipment, Best Practices, Mountain Biking, Road Cycling, etc..

With IRLP & EchoLink connectivity is very reliable, we can be anyplace on the globe, we would be less effected by radio conditions.

Personally I have cycled just over 2000 miles this year. Any many of those hours I was chatting via IRLP to hams around the globe. It adds a whole new twist to my riding.

Anyway -- Just a thought!

420. Ham planning for bike tours

Hi all,

As the lucky pup responsible for ham radio planning for the Bicycle Ride Across Georgia, let me invite you to take a look at how we approach the job.

We began to publish ham-specific planning information through the web last summer. This year we'll make it available to any BRAG-connected person who needs it. We hope it will save a lot of copying and mailing paper documents, and even e-mailing files around.

Take a look at

http://www.geocities.com/philip_milazzo

using the login bmha and the password dahdit. Those credentials will be valid for 20 days. Please share your comments and suggestions. Thanks.

You may also want to plug in a few repeaters linked to EchoLink and eQSO as well. For more info. on these systems, go to the URLs below....

EchoLink - http://www.echolink.net/
eQSO - http://www.eqso.org/

There's a STRONG European prescence on both of these systems, more so than on IRLP IMHO.

Cheers for now & 73's :-)

429. Perfect HF Bicycle Mobile Antenna

Yahoo group: BMHA
Date: 2003-03-11 01:30:54 UTC
From: KQ6XA
Topic: 429 Message: 429

==== THE PERFECT HF BICYCLE MOBILE ANTENNA ====
==== by Bonnie Crystal KQ6XA ====
==== (c)2003 Bonnie Crystal ====

==INTRODUCTION==
HF Bicycle Mobile operation has increased significantly over the last two years. The popularity is partly due to increased interest, awareness, and organization of it among radio operators; and partly due to miniaturization and reduced weight of battery operated transcievers. This article includes an overview of important factors about the installion and choice of an HF bicycle mobile antenna system. Included is a listing with subjective ratings for various configurations of antennas which have been successfully used by the author.

==IMPORTANT FEATURES FOR BICYCLE MOBILE ANTENNAS==
An HF Bicycle Mobile antenna should be safe, strong, durable, flexible, lightweight, highly efficient, frequency agile, easy to adjust low SWR, collapsible, and cover 80~10 meters. Some mounts and antennas made for automobile HF operation may be applicable to bike mobile, but most automobile antennas are not optimized for bike operation. Standard mobile 3/8-24 threaded fittings are desirable for mounting and putting together different configurations. Unlike the automotive standard of 13 feet, the height of a bicycle antenna should probably be kept under 9 or 10 feet (depending upon QTH), and the tip should be very flexible, due to lower overhanging tree branches encountered on sidewalks and bike paths. The antenna should be mounted on the rear of the bicycle as far back as possible, and slanted backwards between 20 and 45 degrees to minimize both wind drag and proximity of the RF radiating element to the rider's head and torso. For a variety of reasons, a whip antenna is by far the most practical and effective choice.

==SAFETY ISSUES FOR BIKE MOBILE INSTALLATIONS==
Above all, a bicycle mobile antenna should be safe for the rider and surrounding people. Even if the rider intends to only operate the bike off-road, at some point almost all bicycle riders find themselves encoutering automobile and truck traffic. It is of utmost importance that the Bicycle Mobile radio system should not impair the rider's balance, vision, or ability to maneuver. Weight and leverage on the bike frame is an important factor which should be considered when installing the mountings. The antenna and radio system should be mounted well clear of the rider and provide space for body motions. Bicycle operation subjects the antenna system to road vibration, side-to-side mechanical oscillations, and wind gusts. The antenna should produce a minimum of added wind drag. A

small yellow or orange ribbon streamer attached with a blunt ball of tape on the tip of the antenna is a useful safety feature both for traffic visibility and to help prevent eye injury. SSB operation is made easier and safer by the use of a single-ear headset equipped with "break-away" connector and a handlebar Push=ON/Push=OFF or toggle PTT switch. Standard momentary PTT buttons that require constant finger pressure should be avoided. CW operation can be both fun and easy with a miniature paddle mounted on the handlebar adjacent to the brake lever. All heavy or sharp objects in the radio system should be well padded and secured. When installing the bike mobile equipment, consideration should be given to what might happen to the rider should there be an unexpected fall.

==THE SEARCH FOR A PERFECT BICYCLE MOBILE ANTENNA==
As an antenna designer and experimenter, my personal search for the "Perfect Bike Mobile Antenna" has been fun! Over the past year, I've tried variations of many different configurations and models of commercial and homebrew antennas on my Bicycle Mobile (BikeE model AT recumbant, no longer in production). All of these antennas were mounted on the rear rack rail of the bike, tilted back at a 35 degree angle from vertical, using the bicycle's metal frame for a counterpoise. The antenna mount "ground" connection is bonded to the frame with copper braid. For composite-frame bicycles, the addition of adhesive copper or aluminum tape is suggested for bonding all the metal parts together, including the front and rear axles. Much of my HF bicycle activity is on 18157.5kHz USB, where I've had Bike-to-Bike QSOs with over 10 other /BM operators. My bike activity includes all HF amateur bands from 80 to 10 meters, with DX, local, and NVIS propagation.

==RATING BIKE MOBILE ANTENNA CONFIGURATIONS==
There are pros and cons to almost every antenna system. Some aspects of a bike mobile antenna may be more important than others, therefore, a suitable effective compromise may be the best answer. The following list includes some of the very best antenna configurations I have personally used, along with some subjective ratings, descriptions, and comments about each of them.

==RATINGS CATEGORIES==
= Safety (NOTE: Depends upon installation)
= Flexibility
= Low Weight
= Low Leverage
= Strength / Durability
= Ease of Removal or Collapsible
= Radiation Efficiency
= Ease of Mounting
= Ease of Frequency Agility
= Low Wind Drag
= Standard 3/8-24 Threads
= Low Height

==SUBJECTIVE RATING SCALE: 1 TO 5 ==
=5=Excellent
=4=Good
=3=Normal
=2=Not-Useful
=1=Not-Applicable

==ANTENNA CONFIGURATION RATING LIST==
== (in no particular order of preference) ==

A. SUPER ANTENNAS MODEL MP-2
... miniature motorized screwdriver
... 48 inch stainless steel whip
... no base rod
... tested on 7~28MHz
4= Safety
5= Flexibility
3= Low Weight
5= Low Leverage
4= Strength / Durability
4= Ease of Removal or Collapsible
4= Radiation Efficiency 4= 18~28MHz; 3=7~14MHz
5= Ease of Mounting
5= Ease of Frequency Agility (While Riding 7~54MHz)
5= Low Wind Drag
5= Standard 3/8-24 Threads
5= Low Height

B. SUPER ANTENNAS MODEL MP-2
... miniature motorized screwdriver
... 48 inch thin stainless steel whip
... with short base rod
... tested on 7~28Mhz
4= Safety
4= Flexibility
3= Low Weight
3= Low Leverage
4= Strength / Durability
4= Ease of Removal or Collapsible
4= Radiation Efficiency 4=14~28MHz; 3=7~10MHz
5= Ease of Mounting
5= Ease of Frequency Agility (While Riding 7~30MHz)
5= Low Wind Drag
5= Standard 3/8-24 Threads
5= Low Height

C. SUPER ANTENNAS MODEL MP-1
... manual screwdriver
... telescopic whip
... long base rod
... tested on 7~28MHz (3.8MHz with added coil)
4= Safety

3= Flexibility
5= Low Weight
4= Low Leverage
3= Strength / Durability
5= Ease of Removal or Collapsible
5= Radiation Efficiency 5=10~28MHz; 3=3.5~7MHz
5= Ease of Mounting
4= Ease of Frequency Agility (Stop to adjust)
5= Low Wind Drag
5= Standard 3/8-24 Threads
5= Low Height

D. SUPER ANTENNAS MODEL MP-1
... manual screwdriver
... 48 inch thin stainless steel whip
... short base rod
... tested on 7~28MHz (3.8MHz with added coil)
4= Safety
5= Flexibility
5= Low Weight
4= Low Leverage
4= Strength / Durability
5= Ease of Removal or Collapsible
5= Radiation Efficiency 5=10~28MHz; 3=3.5~7MHz
5= Ease of Mounting
4= Ease of Frequency Agility (Stop to adjust)
5= Low Wind Drag
5= Standard 3/8-24 Threads
5= Low Height

E. BUDDIPOLE MODEL BUDDISTICK
... tapped coil, extra added tap points
... telescopic stainless steel whip
... with standard base rod
... tested on 7~28MHz
4= Safety
3= Flexibility
5= Low Weight
4= Low Leverage
4= Strength / Durability
5= Ease of Removal or Collapsible
5= Radiation Efficiency 5=10~28MHz; 4=7MHz
5= Ease of Mounting
3= Ease of Frequency Agility (Stop/set-taps/adjust)
5= Low Wind Drag
5= Standard 3/8-24 Threads
5= Low Height

F. BUDDIPOLE MODEL BUDDISTICK
... 48 inch thin stainless steel whip added
... with standard base rod

... tapped coil, extra added tap points
... tested on 7~28MHz
4= Safety
4= Flexibility
5= Low Weight
5= Low Leverage
5= Strength / Durability
4= Ease of Removal or Collapsible
5= Radiation Efficiency 5=10~28MHz; 4=7MHz
5= Ease of Mounting
3= Ease of Frequency Agility (Stop, tap change)
5= Low Wind Drag
5= Standard 3/8-24 Threads
5= Low Height

G. LAKEVIEW MODEL HAMSTICK 14 MHz
... single band fiber/stainless whip
4= Safety
5= Flexibility
5= Low Weight
4= Low Leverage
5= Strength / Durability
3= Ease of Removal or Collapsible (not collapsible)
4= Radiation Efficiency
5= Ease of Mounting
1= Ease of Frequency Agility (Single band only!)
5= Low Wind Drag
5= Standard 3/8-24 Threads
5= Low Height

H. HOMEBREW CABELLAS FISHING POLE and ATU
... 14ft telescopic composite fishing pole
... spiralled #24 wire taped to pole
... Automatic Antenna Tuning Unit (VX-1200)
3= Safety
3= Flexibility
5= Low Weight
3= Low Leverage
3= Strength / Durability
4= Ease of Removal or Collapsible
5= Radiation Efficiency: 5=10~30MHz; 3=3.5~7MHz
3= Ease of Mounting (taped onto short alum. rod)
5= Ease of Frequency Agility (While riding, with ATU)
3= Low Wind Drag
1= Standard 3/8-24 Threads
1= Low Height

==CONCLUSION==
The "perfect" bike mobile antenna may not yet exist! But, there are
some excellent configurations available to the bike mobile operator
by mixing and matching different commercial and homebrew components.

Perhaps an extremely flexible thin 7.5ft whip, combined with a lightweight motorized high Q tuned coil at the base provides the safest and most efficient frequency agile system. For the rider that strives for lowest weight, a manually tuned system could be the answer... although quick frequency tune up may be a decisive factor for those who don't wish to stop for band changes while riding. The author hopes this article inspires more experimentation and on-air HF bicycle mobile activity among radio operators, and helps to clarify some of the issues involved in building a good bicycle antenna. Ride safely and carry a big signal!

From: VE3JC John Cumming
Topic: 429 Message: 430

Bonnie,
Thanks for sharing the super article and rating system for hf bicycle mobile antennas.

Trying to achieve consensus on the "perfect" bike mobile antenna would probably be about as easy as getting everyone to agree on "what constitutes a perfect bicycle" :^)

Here are a few notes I jotted down while reading your article, which obviously reflect my own biases.

- characteristics of the bike itself will influence antenna choice. The optimum antenna solution for my hardtail aluminum frame mountain bike may not be optimum for a recumbent or full suspension bike.

- Use of a BOB trailer or heavy duty pannier rack may influence antenna choice. (for example Russ, KB8U, makes good use of hamsticks mounted to his BOB trailer behind his recumbent)

- Rig to be used, and favorite band/mode will also strongly influence antenna choice. A monoband whip with an 817, or a multiband compromise antenna with a single band rig are obviously poor choices.

- It is not necessary to angle the antenna back, provided it can be mounted far enough behind the seat to permit easy mounting and dismounting. The antenna on my '97 Gary Fisher hardtail is mounted vertically, on an aluminum pole which extends well behind the seat.

- Any adjustable-while-riding antenna system (eg motorized screwdriver) can be dangerous if it takes your attention off the road. Same goes for rig controls. If you have to take your focus off the road for more than an instant to make an adjustment, don't do it! Stop and get off the road.

- One of the things I like about the K2 is that the "dit" on my handlebar-mounted paddles doubles as the PTT button for ssb operation. I can use the ptt with my thumb while still having my hands on the handlebars and brake controls.

- The "Pit Stop" factor: Bicycle mobile hf'ing adds weight to your bicycle, and necessitates special "kick stand" requirements. Therefore, the "perfect" bicycle mobile antenna system is completely adjustable from a simple dismount position, with the bike leaning against you. In other words, an antenna system which requires that you "park" the bike, rummage through your pannier bag to change antenna components, etc. should lose a few rating points when compared to a system which can be changed in a quick pit stop.

- SWR consistency: It is interesting to remove the rig from the handlebar mount and replace it with an MFJ-249 analyzer. Take a brisk ride over some rough terrain in windy and rainy weather, and see how the SWR behaves. It's one thing to be able to tune up in the driveway .... ;^) By the way, be sure to make all antenna adjustments based on your actual riding conditions. Your body (and your BOB trailer) will influence tuning.

- In the efficiency category, the Outbacker type antennas may not be fare as well as the systems you have rated. However, the Outbacker Perth continues to be my preferred Bicycle Mobile antenna, for the following reasons:

== I can switch to any band in a ten second dismount, providing all band capability
== I can clip on a copper wire capacity hat at the base of the whip, which immediately permits operation in the cw portion of the 80 and 40 meter bands (full band coverage for other bands available with simple whip adjustment)
== The stainless steel whip is very "forgiving" if I encounter foliage, etc. It can also be quickly collapsed, or the antenna removed completely - in which case it is transported easily on brackets mounted to the aluminum support pole.

"Outbacker" type antennas can be homebrewed for particular bands - Ned Mountain's 40/17 bike mobile antenna is one example.

Hope these comments are useful. Can't wait for the icy roads to clear up here in Southern Ontario!

A buddy here at work was discussing solar powering his bike. I was telling him about the Ham Radio gentleman who rides each year out of canada to the dayton hamvention. I know I have seen a website showing his bike and trailor rig, but now I can't find it.
Does this sound familiar to anyone?
Thanks,
Jim

You might be thinking of my pictures at

http://www.geocities.com/ve3jc/to_fdim.htm

(More pictures elsewhere on my website, but the "to_fdim" page shows the trailers used by me and Russ KB8U. Unfortunately I think I'll be driving to Dayton this year, but may bring the bike along for the BMHA ride. (by the way, "fdim" stands for "four days in may", the QRP ARCI festivities which are held in conjunction with Dayton)

I do have a solar panel system and charge controller for the bike (mounted on the trailer) - Very tempted to take it on our ride to Dayton last year, but it would have been useless baggage - we never saw any sun at all!

Thank you John. Now that I see your call and name they both look familiar. My friend at work is a biker and an electronics type person so I am trying to get him into ham radio. He enjoys experimenting with alternative power and as best I recall from seeing your trailor once, it had solar panels on it.
Thanks again, I will take a look at your pictures.

If you check the BMHA website there should be a map and information about the bike ride. They usually put it on the website a few weeks or so before the hamvention. I have ridden the last few years and we always have a great time. Jim Gumbert is usually in charge of the ride. For information from last year's ride see: HamVention ride (http://www.lafetra.com/BMHA/Timely/hamvention_ride_2002.htm) Carol KC8CEX [Non-text portions of this message have been removed]

Hi Bruce,
The BMHA ride at Dayton is an annual event, held on the Saturday
afternoon of Hamvention weekend (gives you Friday and Saturday morning
to buy all the goodies, and doesn't interfere with the BMHA forum.)

Keep an eye on
http://www.lafetra.com/bmha/Timely/Dayton2003.htm
for further details as Dayton gets closer.

438. Dayton Hamvention HFpack Events

Yahoo group: BMHA
Date: 2003-04-13 23:35:36 UTC
From: KQ6XA
Topic: 438 Message: 438

Many operators enjoyed attending the HFpack events at the Dayton Hamvention last year. This year's Hamvention HFpack events will include a technical forum about HF Pedestrian operation, an eyeball rally, and the popular Big HF Pedestrian QSO. Bring your HF rig with you, it would be great to have some HF bike mobiles there!
---Bonnie KQ6XA

==Dayton Hamvention HFpack Schedule of Events==

=18157.5 kHz USB = Dayton HFpack open calling frequency=
All operators welcome.

=HFpack Lunch Rally and Eyeball=
12:00 Noon Saturday 17 May 2003
Location: Outside the Main Hall.
Look for the HFpack Logo Banner.
"Best Backpack" Contest.
Pack your radio with your lunch!

=Big HFpack Pedestrian QSO=
1:00pm to 1:30pm Saturday 17 May 2003 (1700z UTC)
18157.5 kHz USB (also 7242.5 kHz LSB)
Take part in the largest HF/PM/BM QSO in the world.
QSO Leader: Mark KI0PF
Location: Outside the Main Hall.
Look for HFpack Logo Banner and sign the QSL Card!

=HFpack Forum: Successful HF Pedestrian Techniques=
10:45am to Noon Sunday 18 May 2003
Location: Hamvention Forum Room 2
HFpack discussion and powerpoint presentation about the latest developments in pedestrian HF operation.
Presenter: Bonnie Crystal KQ6XA

From: Phil Milazzo
Topic: 439 Message: 439

Let me invite my fellow BMHA members to join the 2003 Bicycle Ride Across Georgia. http://www.brag.org

I'm responsible for amateur radio communication on BRAG. I think it would be fun to have a clear BMHA presence on BRAG and other state bike tours. I missed out on combining ham radio with RAGBRAI last year. Since it was my first, I focused on being a first-timer and chose to leave my radio at home.

441. Empire State Aids benefit bicycle ride

Yahoo group: BMHA
Date: 2003-05-04 22:25:18 UTC
From: Pres Waterman
Topic: 441 Message: 441

Hi. I just got this recently:

AIDS bicycle ride requests ham radio support. Hundreds of bicyclists
will be pedaling from Niagara Falls to New York City for charity from
August 18-23, 2003. It's called the Empire State AIDS Ride. It's a
500-mile trek. Some days they will be riding over 100 miles. You can
read more about the ride and the beneficiaries (as well as donate,
volunteer, ride or get your friends to donate/volunteer/ride) at:
http://www.empirestateaidsride.org/ If you would like to join the
discussion group specifically for Amateur Radio operators that will
be helping out then send an email to:
EmpireHam03-subscribe@yahoogroups.com
Submitted by Mark Wintle, W1NTL,
http://www.wintle.com/w1ntl/empire03/ or MEW@...

I was wondering: is anyone planning on riding and using ham radio in the
ride? I am considering it.

Thanks

442. BMHA Dayton Hamvention Bike Ride May 17th

Yahoo group: BMHA
Date: 2003-05-10 23:52:57 UTC
From: nf0n
Topic: 442 Message: 442

The 12th Annual BMHA Dayton Hamvention ride will be held Saturday May 17th, 2003. Here are the details of how to get there and when it starts:

Bicycle Mobile Hams of America's Twelth Annual Hamvention Ride

Tipp City Park, Tipp City, Ohio
Ride Begins 3:30 PM Saturday, May 17, 2003
Come and meet your fellow BMHA members and check out their bicycle-mounted transceivers. Set up a special-event station. You can bring your bike and come on the ride, or relax in the park and perhaps have a QSO with those of us on the ride. Also, in response to requests from BMHAers who may have logistical problems getting their bikes to the Dayton area
RENTAL BIKES WILL BE AVAILABLE !!
Our friends at Tipp Cyclery (whom you may remember as the donor of the "I Traveled the Farthest to the BMHA Ride" T-shirt) have informed us that a limited number of rental bikes will be available. For more info, check out their web site at www.tippcyclery.com, or send me an email and I'll put you in touch with them.
General Information
Once again the ride will start from the Municipal Park in Tipp City, Ohio. Tipp City is on Interstate 75, about 10 miles northeast of the Hamvention site at Hara Arena.
The ride will leave at 3:30 PM EDT. If you'd like to come up early for a snack or some socializing, we'll be there by about 2:00 PM. We'll be in the North parking lot (same as last year). Don't worry
about finding us, it's not as if you could hide a bunch of biker-hams in a park that size. The ride itself is normally an easy 27 miles with stops thrown in occasionally to keep everyone together, and slow enough for some meaningful conversation (or DXing).
Send me an email at otown@... if you have any ideas, or just to let me know your coming. (It's always nice to know how many people to plan for.) But there's no registration or anything formal
like that. Just show up!

Here are the directions:

First, go east to I-75. If you're in front of Hara, you'll notice that Wolf Rd. dead ends into Shiloh Springs Rd. (the main road that Hara is on) at the traffic light right in front. Take Wolf Rd. south

about a quarter-mile to the first intersection. This is Turner Rd.
Turn left (you can only turn left), and stay on this road until you
get to I-75 (about three miles).
NOTE: Turner Rd. changes into Shoup Mill Rd. when you cross Main St.
It then becomes Needmore Rd. when you cross the Stillwater River.
HOWEVER, all of these roads together are known as (and usually
marked) Wright Bros. Pkwy.
When you get to I-75 and Needmore go NORTH (left, across the bridge).
Look for the Tipp City exit (EXIT 68) in about 10 miles. Turn right
(east) at the top of the ramp. This is Main St. in Tipp City.
Take Main St. into "downtown" (about a mile). You will cross a
railroad track (Tipp Cyclery is on the right as you cross if you need
anything for your bike).
Turn left (north) at the second traffic light past the railroad.
This is THIRD ST.
Look for the park on the right after four or five blocks. You'll see
a civil-war era cannon on the left, in front of the American Legion.
The north parking lot entrance is about a block further north. We'll
be around the parking lot someplace. Talk-in is on 145.23 MHz (-).

See you there,
Jim Gumbert, NC8Y
otown@...

443. Mounting an HF antenna

Yahoo group: BMHA
Date: 2003-06-06 15:41:27 UTC
From: SpikE
Topic: 443 Message: 443

I'm thinking of mounting a 4' Outbacker to the Blackburn luggage rack on my hardtail mountain bike. I have a Hustler Quick Release (HOT) 3/8x24 mount. I was wondering if anybody knew if this would be sufficiently strong enough for this antenna and if the rack would be a good mounting point?

444. rsgb special offer join rsgb for £1.05 or $2 for a year

Yahoo group: BMHA
Date: 2003-07-06 21:42:56 UTC
From: ian abel
Topic: 444 Message: 444

Join the Radio Society of Great Britain for £1.05 or 2 US dollars

Normal membership cost is £42.50 but if you join in July

with the RSGB special offer Membership will cost you £1.05

That's a massive saving of £41.45 pounds!

For that you get one years membership of RSGB which includes the RSGB national radio magazine Radcom.

Go to http://www.qsl.net/g3zhi/rsgb.jpg for the application form.

445. Tour de France special event station

Yahoo group: BMHA
Date: 2003-07-07 14:02:11 UTC
From: slafetra
Topic: 445 Message: 445

We received the following message from Angel WA2VUY

Tour de France special-event station W1T

W1T (W 1 TourdeFrance) will be a special event station active on all bands during the Tour de France, 5 July through 27 July, to commemorate the 100th anniversary of the Tour de France. Operators: WA2VUY, and K2MVW; QSL to WA2VUY. The QSL card will have a photograph of the 21 of the 22 living Tour champions taken October 24, 2002, in Paris, France, at a special reunion.

Hi everyone:

Angel....Do you know if they'll be on any of the VoIP systems such as EchoLink, WIRES II or IRLP or do they not have that kind of capability?? If they are on either of these networks, what's the 411 on that so I can pass it along to the appropriate group?? :-)

Many thanks in advance. :-)

Cheers for now & 73 :-)

John - I recently found this list and am looking at equipping my Raleigh M60 (also a hardtail) for HF. Initially, using FT-817 and a modified MP-1 antenna (12" base rod and flexible whip from a 5/8 2M antenna instead of the telescoping whip). I have a mirror mount (Radio Shack, I believe) that I've mounted to one of the rear struts of my bike's rack. It seems to be solid enough, and gives a slight rearward tilt for the antenna.

I haven't had the chance yet to try riding with the antenna mounted - trying to move the antenna by hand suggests the mount itself is solid enough. I'd be more worried about vibration affecting the antenna. Give it a try!

449. Article: First Week 5MHz Operations

Yahoo group: BMHA
Date: 2003-07-10 02:20:05 UTC
From: KQ6XA
Topic: 449 Message: 449

==First Week of 5MHz Channel Operating in USA==

During the first week of 5MHz operation in the USA, we are already starting to see some trends in operation. The opening night and following day was marked by many stations making rapid contacts and cooperating together for an enjoyable operating experience. Operators wanted the chance to brag that they were on the air at the moment the 5MHz band opened up.

The novelty of the 5MHz channels has now settled down to a usable level for calling and QSOs. Most ops still are acting like they are on their first date, showing off their best operating habits, using short transmissions and IDs. They are treating the channels appropriately, observing the kind of brevity in operating procedures commonly used on a high-level VHF repeater or regional linked FM system. Hopefully, in the future, 5Mhz will continue to be an example of good operating techniques and behavior.
5MHz daytime NVIS propagation out to 250 miles is good, although summer noise limits the comfort level when working the 50W stations. Nights bring good DX and regional propogation, but lightning storms tend to make it harsh in some areas.

As expected, there are a few ops who are unfamiliar with the new technical requirements for transmitting, and may have briefly drifted off frequency, or dialed up the center-of-channel frequency instead of the dial frequency. Usually, someone responds by calling them on the channel, and reels them in on correct frequency in a good-natured way.

Here are some useful operating techniques for the 5MHz channels:

1. Put all the channels in your transceiver memory, including the USB mode. If possible, also include narrow TX bandwidth,and correct TX power level.
2. Before transmitting, select a channel, lock your VFO dial, and lock your microphone Up/Down and keypad.
3. Use your RIT or clarifier to tune other stations in, not your main TX dial.
4. Use a resonant antenna like a 5MHz dipole fed with coax cable if possible, so that auto-tuning or manual-tuning is not needed. Transmitting a carrier, especially zero-beat, is not allowed... only USB voice.
5. Before starting to transmit, listen on the channel for at least 3 minutes. If it is vacant, start by just saying your callsign. In many cases, it will not be necessary to call CQ. Just announcing your callsign (phonetically) and your location is usually enough to

start up a contact.
6. If you have a very high receive noise level at your QTH, be very cautious about transmitting because you may be interfering with a QSO that is already in progress between stations in quiet locations.
7. Peacefully co-exist with other stations talking in the background. Unlike other HF SSB bands, 5MHz is channelized and very limited. It is possible for there to be many QSOs going on simultaneously in different areas without much harmful interference.
8. ID more often. Once you establish contact, say your callsign and the callsign of station you are talking to at the beginning of your transmissions (without phonetics). This will help a lot when there are multiple stations simultaneously using the same channel.
9. Avoid ragchewing. Use short transmissions, drag your feet between overs, and give everyone a chance to use the channels. There are only 5 of them for everybody to share.
10. Before transmitting, check your transceiver's calibration by tuning WWV on 5000.000 kHz.

5MHz Channels Around the World?
Although 5MHz amateur channels are only in use in UK and USA as of July 2003, it is likely that other countries will establish 5MHz amateur services and may follow a similar pattern of channelization.

Radio operators tend to use a casual abbreviated and easily recognizable term for a channel. By using channel nick-names, the familiar information is conveyed rapidly and with clarity. This is why we often refer to 146.520MHz Simplex as "5-2", and a 146.760-MHz Repeater as "the 676 machine". We are hams... abbreviations and jargon are in our nature!

So it seems very normal that within the first few days of operation on the 5MHz channels, we started calling the 5MHz channels by their shortened dial frequencies, nick-names such as "346" or 403". In the absence of any official channel designator, hams just use what works. At any rate, this is catching on. The author has compiled a list of known amateur 5MHz USB channels. This is presented below with notes. The channel designator uses the shorthand significant dial frequency that has become common among West Coast operators. Most are avoiding calling them "Channel 1, Channel 2, etc", because ham radio is international, and everyone is optimistic that more channels will appear in the future.

5MHz USB amateur channel frequencies worldwide:

CHAN - FREQ - LOCATION - COMMENTS
167 = 5167.5 USB (Alaska only)[Emergency]
193 = 5193.5 USB (*German Beacon only)[+1500Hz]
258 = 5258.5 USB (UK only)[UK-FA]
278 = 5278.5 USB (UK only)[UK-FB]
288 = 5288.5 USB (UK only)[UK-FC]
330 = 5330.5 USB (USA only)

346 = 5346.5 USB (USA only)
366 = 5366.5 USB (USA only)
371 = 5371.5 USB (USA only)
398 = 5398.5 USB (UK only)[UK-FE]
403 = 5403.5 USB (USA/UK)[UK-FM]

Notes:
1. Above listed frequencies are "dial frequencies" as you see them on the radio in the Upper SideBand mode. The center-of-channel offset is already figured out for you.
2. Only USA and UK are known to have 5MHz channels in general use for the amateur radio service at this time.
3. Only USB voice 2.8kHz bandwidth is authorized in USA.
4. Voice, Digital, and CW modes in a 3kHz bandwidth are authorised in UK, and channels are often described by the centre-of-channel frequency or official "Foxtrot" designators.
5. USB is the defacto standard for voice in UK, although LSB is allowed.
6. UK maximum power is 200 Watts.
7. USA maximum radiated power is 50 Watts into a dipole.
8. UK operation requires an authorisation (NoV) for experiment.
9. USA operation is open to all HF licensees.
10. *A German amateur-affiliated propagation beacon test station DRA5 transmits current solar data on CW, FSK, and PSK31 with a center-of-channel frequency of 5195.0kHz. (channel 193 +1500Hz).

The level playing field that has been created by the USA 50W/dipole power limit makes the 5MHz channels perfect for portable, mobile, and emergency SSB operation.

HFpack, the HF Portable Group, is using channel 371 (5371.5 USB) as a calling frequency for portable operators. Already, many backpack portable, bicycle, mobile, and pedestrian operators, as well as affiliated base stations have been active on it. In addition to monitoring channel 371, HFpack conducts regular weekday and weekend skeds. HFpack gives priority to pedestrian, portable, and emergency stations. As this expands, it may be a viable alternative for backcountry communications in areas not served by VHF/UHF repeaters.

Channel 403 (5403.5 USB) is the only channel that is common to both the UK and USA. It may become the most useful DX channel.

5MHz channels lend themselves well to regional emergency preparedness operation. Some coordination in the future may be useful for state emergency nets, which will undoubtedly make good use of the unique qualities of propagation found in this part of the spectrum.

The author hopes that this article helps to orient new users of the 5MHz band, and to encourage good operating practices.

Topic: 451 Message: 452

Jack,
I run a base loaded 5/8 wave nmo mount back on the
rack. I stuck it on there thinking it wasn't going to
work at all but was curious to see just how bad it
would be and the thing was flat on most of the band.
Its an el cheapo mfj mag mount taken off the mag and
screwed on to the bike. I have used it on a few
ms150's and tour de cures and I can hit the repeaters
or work simplex almost as well as the mobiles doing
the sagging.
Its worth a try if you have one laying around.

Ever consider one of those "Hershey Kiss Mag-Mount" antennas? Gosh, they're tiny and light. Just figure out a 1" round piece of steel to slap it to and preferably it is over some more metal for a ground plane. Or maybe glue it to the bike and not use its magnetic properties but couple it to the frame. We are literally talking ounces here/

Thanks

I have used the miny hersey style,2/440 short mag mount along with a RS 5/8
I mounted a steal plate at rear of rack.. the hershey style stayed inplace
great and the 2/440 did pretty good but the best RF wise was the hardest
to keep on board seems bouces on a bike are much harder on the magent
staying put..

I ride trail patrols for many walkathon in local park so trees on these
normally use foot paths also have snagged the 5/8 wave but it sure worked
good I could use min. power to save batt's..

good luck

456. First 5MHz Bike Mobile Contacts?

Yahoo group: BMHA
Date: 2003-07-14 01:56:43 UTC
From: KQ6XA
Topic: 456 Message: 456

Today, I made my first 5MHz Bike Mobile QSOs while riding along the bike path beside San Francisco Bay.
Between 0050z and 0120z on 14 July 2003 I made contact on 5MHz Channel 371 (5371.5kHz USB) with:
WB6MLC/PM (Ken, Pedestrian Mobile in Fremont CA)
W3FF (Budd, Portable in Redding CA)

I just sent out eQSLs to both of them, so it is possible these could be the first verified bike contacts on 5MHz.

Has anyone else made any 5MHz Bike Mobile contacts so far?

Bonnie KQ6XA

457. HFpack 5MHz Monitor, Skeds

Yahoo group: BMHA
Date: 2003-07-17 20:55:23 UTC
From: KQ6XA
Topic: 457 Message: 457

HFpack, the HF Portable Group,
now uses Channel 371 (5371.5 USB) daily
for calling and has a sked every evening at
8:50PM Local Time in all USA time zones.

Everyone is welcome to participate.
5MHz is excellent for HF SSB Bike Mobile because
it is not crowded and everyone uses low power
and meager antennas. You have a good chance
of being heard.

HFpack calling frequencies:
5371.5 / 14342.5 / 18157.5 kHz USB.

For more info:

http://www.hfpack.com

This is a good question, Kim.

Unfortunately, I/we don't have any specific suggestions other than to contact local bicycle clubs along the route (this seems a bit more oriented to mainstream bicycle clubs that need not be ham-radio-specific). Another idea would be to contact bicycle shops along the route.

I'm going to post this to the BMHA e-group (http://groups.yahoo.com/group/BMHA/) in case other ideas surface. I'm hoping that they will contact you directly.

Good Day Bicycle Mobile Hams of America :)

I am wondering if you could let me know who I should contact with reference to Sponsorships, Event Planning...and Mapping (routes to take)

I am going to be starting a North American Bike Tour...representing Voice for the Children, a National charity in the United States. Going throughout all the 50 states registering members and fund

raising...we will then cross into Canada, were I am from...and go through all major cities here. The main purpose is to create awareness and to sign on members into the various programs for the pro-active search and rescue efforts of our missing and abducted Children. Once I return into Canada...I will be founding the Canadian Voice for the Children charity, showing to both countries that we need to..and will be..working together.

I am hoping to begin this tour by the end of this year. I would love to discuss the possibilities with you soon.

All my best,

Kim Harrington
to reply, it would be best if you could respond to this email:
Kim.Harrington@...

note My 11 year old daughter Kayla will be with me one week out of every month I am on tour. This will be of interest to other children...and get them involved as well.

Kim, I might also suggest contacting Adventure Cycling. BMHA is an affiliate of Adventure Cycling. You can view their website at: www.adventurecycling.org

They do sell bicycle maps mostly for the USA but they may also have links to other sites that may supply maps and/or other advocacy groups.

Mike

460. Need tips

Yahoo group: BMHA
Date: 2003-07-29 15:08:05 UTC
From: Rudy Marcelletti, K8SWD
Topic: 460 Message: 460

I am new to the group and am looking for tips and suggestions for rigging an HF station on my old 10 speed road bike.

I was contemplating using a Topeak rack and rear bag for the battery and amp and fashioning some sort of T mount off the back of the rack to hold an MP1 antenna and dual band antenna. Rig is FT817 and will be in a handlebar bag. Heil Traveler head set.

I'll have to look into that. Maybe that's something I could put on without all the weight of adding a tail-rack.

Subject: [BMHA] Ideas for VHF antennas/mounting

: Anybody have any ideas for a lightweight VHF antenna and mount for a road
: bike? I'm using a WX2NJ Jurassic Duck on my MTB, but I want something
: lighter for my road bike.

Ever consider one of those "Hershey Kiss Mag-Mount" antennas? Gosh, they're
tiny and light. Just figure out a 1" round piece of steel to slap it to and
preferably it is over some more metal for a ground plane. Or maybe glue it
to the bike and not use its magnetic properties but couple it to the frame.
We are literally talking ounces here/

Thanks

Jack and Pres,

I currently use a Shakespear squatty body VHF marine antenna optamized for 2 metres on my bike. This antenna is a 1/2 wave end fed no ground plane antenna. I have a light alloy bike rack on the back and I cut and mounted an aliminum plate on the rack to mount the antenna. If you like I can take some pictures and post them to the pics area.

S.Earl-
I'd be interested in those pics you mention. Also, is the name of the Shakespear VHF antenna you talked about, actually, "Squatty Body VHF Marine Antenna" . If not, do you have it's actual name. I want to go with a no ground plane version like this.

Thx

> Rudy Marcelletti, K8SWD

Sounds very similar to the setup I'm slowly working on (I have this crazy idea about operating HF mobile during a metric century in a few weeks; however I need way more time and miles on the bike and should probably NOT carry the additional weight of the ham gear for that trip!)

Bike is a Raleight M60 "hardtail" style MTB with a conventional rear rack.

Antenna mounting - I picked up a mirror mount antenna mount (Radio Shack or lakeview - SO-239 and 3/8 x 24 thread) I've bolted to one of the rear stays of a bike rack. This gives the antenna slight rear slope.

Antenna - modified MP-1: Longer base rod home-made from aluminum rod, may use a whip from an old 5/8 2M antenna instead of the telescoping whip. The telescoping whip would be fine for stationary use, I'd be nervous of banging it while riding.

Rig Mounting: First tried a handlebar mount for a U-lock as a base for the FT-817. Clunky but it looked like it might work. Then got a great idea from a web page I can't find now (argh!) - Cable hangers! Use two 3/4" or 1" cable hangers to mount a metal plate above the handlebars, then mount rig to the plate using whatever means (I have a FT-817 in a mountain ops rig wrap I bungee to the plate).

Headset: Need to get one - for now, I think I will use the 817's mike, but this means NO mobile-in-motion. I *really* need to buy a Heil Traveler.

Hope these ideas help

From: Rudy Marcelletti, K8SWD
Topic: 460 Message: 469

your ideas do help. Where do you carry the battery and what size do you carry?

MP1--yes--the tele whip is not good for mobile. I got one for about $10.00 at a CB shop about a foot longer than the tele, and fairly stiff. I have not yet made up a longer arm.

I am still trying to figure out how to attach metal to the rack to mount the antenna. I may have to ditcth the Topeak set up and get a hard mount rack and bag set up. The Topeak set up is nice as the rack clamps onto the seat post (really for my FS bike) and needs no other attachments, however, the mating cargo bag slides onto the rack using channels in the rack and mating surface on the bag bottom and a nifty latch in front--no straps. Going to a fixed rack will solve my grounding problems too, I believe.

I like the idea of the handlebar mount. I am still thinking. For now, I think I will simply stuff it in the handlebar bag.

I recently spent several months off the bike due to moving, before taking a 6-day loaded tour with my kids...and I'm sure that my camping gear and such weighted more than a lightweight mobile rig and a couple of gel-cells. If you ride that much at all, you shouldn't have any trouble unless you live in a very hilly area. I know that I was hating life by the end of our first day (a full metric century in itself, with lots of hills and a late start that had us riding right through the middle of a Florida August afternoon), but by the 2nd and 3rd day, I was having no trouble keeping up with my teenagers - as long as we were on the bikes....off the bikes, I had trouble standing or walking a straight line LOL.

From: Rudy Marcelletti, K8SWD
Topic: 474 Message: 474

I gathered up all the components I thought necessary. I drew up a plan. It looked really good on paper--but my bumble bee wouldn't fly! I need a different rear rack!

My rear rack of choice was going to be a Topeak QR rack with integral QR pack I use for long off-road trips. I was going to use this on my road bike--a mint large frame vintage circa 1975 Sekine 10 speed which does not have frame bosses for a rack near the seat stem column (it does down near the axles). I only have about 3"--4" of seat stem sticking out of the frame. When I mount the rack on the seat stem, it is over a foot above the rear wheel. With the pack on the rack--I can't get my leg over the pack!!!! (Well, safely anyway). The bike has center pull brakes so I can't go below the seat post clamp to the frame tube. The system will work fine on my off-road bike, but I have no way to mount the radio up front and I don't want to ride my off-road bike on the road just to play radio--tires are $80.00 a set and I don't want to wear them out!

I looked at the Blackburn racks and am told they won't fit the older 27" wheel 10 speeds because they are designed to fit the new 27" tired bikes which do not really have 27" wheels, or if they do, the frames are now so different, that racks for 26" off-road bikes fit the road bikes--or something like that. Anyone know a source for racks to fit old fashioned 10 speeds?

Maybe I should simply get a rolling couch like Bonnie has and my problems should be solved--but a "heads-up TV display" would be cool on the windshield! I also heard Bike E has closed its doors :-(

be like me and think of getting a new bike.

The hardware and weight reasons are worth it.

477. PTT/Ear bud/Throat mic for VX-5R?

Yahoo group: BMHA
Date: 2003-08-31 21:23:53 UTC
From: Hans K0HB
Topic: 477 Message: 477

Recently took up recreational bicycling as a means of exercise and relaxation. My bike is a Marin "Redwoods" model.

One of my other hobbies is ham radio, and I carry a Yaesu VX-5R HT on my belt for "company" and possible means of summoning help (I ride on some rather isolated rural trails sometimes). I'm looking for a plug-in lightweight headset (preferably earbud and throat mike) with a PTT switch which I could situate on the handlebars.

Anyone here know of such a unit which works with the Yaesu radios?

I know that for $24.95 you can get a helmet-mounted boom mic w/ earbud from
Radio Shack.

I don't think that I will got for a recumbent.

A nice road bike looks very comfortable and
handles.

I have test driven in a few loops around the
parking lot two bikes. The Cannondale
R700 and the Trek 1200C. They swoop
upon the prey like lightning compared to
my old schwinn. There is no design for
racks on them.

From: Rudy Marcelletti, K8SWD
Topic: 474 Message: 482

I only have ridden the Cannondale--don't know what it was--but it was full suspension recumbent. I liked it alot and almost bought it. I did not look at rack provisions. It did have an ample seat back however, and it looked like a substantial pack could fit there. Definitely more study is in order after deer season, during the doldrums of winter!

One thing I did notice about recumbent riding however--I did not feel I was very aware of my surroundings like I am on my upright off-road or road bikes. I may go with one of the "hybrid" type of road bike that looks like a mountain bike with road tires and gearing. Plenty of rack options for them. My wife bought a Cannondale Warrior 500 Friday and it has lots of bosses on it for mounts--even on the forks.

Topic: 474 Message: 483

Hi Rudy,

You might ask a bike shop to see if they have a single brake mount for a rack. This is basically an "L" bracket that will fit in the bolt on the center pull brakes between the frame and the brake assembly. The bracket comes out of the top of the brake attachment bolt and then immediately is bent backwards where it is bolted onto the rack. I've seen this done before and it can work very well. You will probably have to get a longer bolt to hold on your brake assembly but it does work. Good luck.

I think I agree with a previous post that it will be easier to get a bike to fit the rack than a rack to fit your bike!

I just have to make a comment about bike "fit". Many pain problems can be traced to a bike that is not fit properly. I'm terribly difficult to fit on a bike. Because of lower back problems, I don't bend at the waist like everyone else, but a bit higher up on the back. This makes the top tube length very critical and difficult to get right. I ended up getting one of those Look adjustable handlebar stems to I could move the bars back about as far as they would go. Once that was done, a lot of the pain problem went away.

I have a great friend that owns a high-end bike shop that does custom fits for the local racers. He spends many hours on a "fit kit" with a person to get everything just right. Then they send the measurements off to the factory where they make a frame to exactly match that person's unique needs. My wife who is a triathlete (not me!) got one done this way from him and she can ride for hours in comfort without any problems. (Warning: Not cheap!) Getting someone who can really understand how to fit a bike is difficult. Many bike shops are not really equipped to do it right and can't really afford the inventory necessary for all the different sizes necessary. (I know, I worked in one once and they just tried to get it close enough!)

As for recumbent, well, I've ridden a lot of them and they are nice on the rear end but are hell on hills. Here in Colorado where one "hill" can be 18 miles long, I have yet to see a recumbent. They are nice, however, on the flats when the wind is whipping up.

Good luck!

73,

Bruce KG0SH
Golden, Colorado

I love to meet any bicycle hams in the South Shore
area of Eastern MA, ie Abington, Brockton, Whitman,
Rockland, Hanson, etc.

I don't think the plugs fit Yaesu's. They might work
with Icom's or Alinco's. Hamradio Outlet has a whole
bunch of mikes for his application such as throat mikes
with independent PTT Switches.

486. Re: [BMHA] Looked good on paper!

Yahoo group: BMHA
Date: 2003-09-03 03:34:21 UTC
From: William H. O'Hara III
Topic: 474 Message: 486

I have looked at the TREK series at the lower level.

The Trek 1200 is a triple and doesn't look too bad.
I think that 105 components are better. I've seen
Cannondales for 1000$ with 105 and ultegra. The 1200T
from Trek was going to be about $750.

I'm still deciding on price range. I think that the Trek
has more models with the bosses for racks. I don't
think that many of the cannondales do.

I'm primarly considering cannondale, Fuji, trek. I
went to an airborne dealer, but he had nothing in stock
from airborne!

I just put a trek 520 on layaway....you might look into that if you take long loaded trips.

Quoting Bruce Thompson <brucet@...>:

> Hi Rudy,

From: Rudy Marcelletti, K8SWD
Topic: 474 Message: 489

I too am going to give the Trek and Gary Fishers a good look along with Cannondale. I was going to even consider Schwin--but the dealers in Kalamazoo closed up. Actually, 3 main dealers in the area now, but the Specialized on is not convenient to get to and I just was never impressed with the bikes. The Trek dealer is near a mall and the Cannondale dealer is right on US131 but I can ride all country roads to him. However, I have heard rumors he may be closing shop too in the near future--just burnout. If so, I am sure the Trek dealer would snatch up Cannondale. The one thing I sure liked on my wife's new bike (Cannondale Warrior 500) was that it has lots of bosses--even on the forks.

I still may put a small package together using the Topeak pack I have and just play around the area with it on my off road bike--the tires are close to replacement age. The Topeak will handle 20 lbs--so I would be pretty close if I skip a tuner, go resonant with MP1 and use a 7AH battery, FT817 and HL50B.

The local (Tupelo) police department use this unit...
http://www.pryme.com/SPM-400a%20flyer.pdf Thought about getting one myself,
but for now I'm still using my old RatShak vox/ptt unit in ptt mode only
with the HT of the week on my Camelbak...

okay.

I can't believe how many dealers are actually around me.
These are just the ones that I went to... There are lot more.

1) Motobecane (I duno. price seems good.. needs to order size for me)
2) Trek/Fuji
3) Trek/Specialized/Allez/Airborne
4) Trek/Specalized/Cannondale

The Trek 1200 feels like an insult. The cannondale's
lowest model, R600 has nice welds. The 1200 just has
a quick weld and paint over it. For the money you would
think that you get something nicer.

Can anyone get the Trek 1200 for $750?
Or a Cannondale R600 for $1150?

Bill

492. Re: [BMHA] Re: Looked good on paper!

Yahoo group: BMHA
Date: 2003-09-03 13:21:44 UTC
From: Rudy Marcelletti, K8SWD
Topic: 474 Message: 492

Thanks for that tip Bruce. The problem I am having is that I can't find rear brackets that clear the tire. All I can find are for the smaller mtb's.
Rudy Marcelletti, K8SWD

493. Re: [BMHA] Looked good on paper!

Yahoo group: BMHA
Date: 2003-09-04 01:56:44 UTC
From: William H. O'Hara III
Topic: 474 Message: 493

okay.

I can't believe how many dealers are actually around me.
These are just the ones that I went to... There are lot more.

1) Motobecane (I duno. price seems good.. needs to order size for me)
2) Trek/Fuji
3) Trek/Specialized/Allez/Airborne
4) Trek/Specalized/Cannondale

The Trek 1200 feels like an insult. The cannondale's
lowest model, R600 has nice welds. The 1200 just has
a quick weld and paint over it. For the money you would
think that you get something nicer.

Can anyone get the Trek 1200 for $750?
Or a Cannondale R600 for $1150?

Bill

494. Re: [BMHA] Looked good on paper!

Yahoo group: BMHA
Date: 2003-09-04 19:35:38 UTC
From: Rudy Marcelletti, K8SWD
Topic: 474 Message: 494

Are those recumbent? I think the Cannondale is the better of the two--and without looking them up, the Cannondale is probably loaded with somewhat better components. Aren't those Cannondale welds awesome! They even impressed a friend of mine who is a pro welder specializing in SS and aluminum (he can do a bit better--but not much!). On the other hand--which one rides better for you? The price difference is a nice radio.
Rudy Marcelletti, K8SWD

495. Re: Speaker/mic suggestion

Yahoo group: BMHA
Date: 2003-09-05 00:13:39 UTC
From: Kevin Bersch
Topic: 479 Message: 495

I use the pryme SPM400 with my Yeasu FT 530. Works really well. I hae been told the wind noise is does not drown me out. I put the mike boom under my helmet strap so it stays next to my cheek. I think there would be less wind noise if I could find a foam ball to put over the mic. I recommend this headset. It works for me! And you can get a remote PTT that will velcro to your handle bars. I bought my headset and PTT through HRO.

496. Re: [BMHA] Looked good on paper!

Yahoo group: BMHA
Date: 2003-09-05 01:54:13 UTC
From: William H. O'Hara III
Topic: 474 Message: 496

it all seems the same to me.

I would rather spend less but I don't save money
in the long run. Hopefully the drivetrain
components will last. I don't want to get Sora or
the level below sora. Some of the rating on
roadbikereview.com seem to suggest short life
spans.

I would like to get a triple as well.

Is the cannondale frame going to last
longer than the Trek? Does cannondale
really stick by their warranty? Is that
a concern?

The cannondale is starting at much higher
price than the treks, but you think TREK
could do a better job of welding.

I kind of liked the idea of the shimano
flightdeck. The guy said it was 80$
whereas a simple computer was $30.
It seemed foolish to me to buy the simple
computer and later want to buy the flightdeck.
The same thing applies to the bike frame
and other components.

From: "Rudy Marcelletti, K8SWD" <k8swd@...>

Thanks for that tip Bruce. The problem I am having is that I can't find rear brackets that clear the tire. All I can find are for the smaller mtb's. Rudy Marcelletti, K8SWD

Interesting. Maybe I don't know what you mean then. I can't believe there isn't a rack that would fit your bike. Have you looked at this one? A bit pricey but.

http://www.adventurecycling.org/cgi-shl/webc.exe/advsales/st_prod.html?p_prodid=66&p_catid=46&sid=4r1ESN1f

From: William H. O'Hara III
Topic: 498 Message: 498

I'm not looking at any recumbents.
The price difference is more than one radio
for several of the bikes that I'm looking at.
It's very frustrating. Each dealer is like a
used car salesman and they want to know
how much you can pay a month.

The cannondale seems like the better price
with a beefy bottom bracket and crank with
ultegra components. However, I don't
get to test ride these things outside the parking
lots and I don't have solid experience on these
things. I felt like giving up after going to a dealer,
yesterday.

They'll all drop their prices by $100 to $200 minimum
too, if you know how to talk to them.

Hi Bill - I own a 14-year-old Cannondale touring bike, have done over 10,000 miles of loaded touring and countless miles of road riding on it, and have NEVER had a problem. And I'm no lightweight! A friend of mine who owns a bike shop in WA checked my frame on his alignment jig; it's good as new. I personally know guys who have sent in 10-year-old broken frames to Cannondale; they honored the warranty, and quickly.
Needless to say, I highly recommend Cannondale.
Their bigger frames make a good ground plane for rack-mount antennas too:)

yah
I really think the cannondale is better.

I was looking at the crank reviews. Limited
amount of reviews compared to dura ace
reviews but they all suggest that cannondale
stock crank is better.

Dealer won't let you ride it anywhere? When I test road the Cannondale recumbent, I was told not to go off the pavement onto the dirt so dealer would not have to clean tires--I took off for about 10 minutes down the road, around the corner and out of site. Of course, my wife and car were still at the dealer's, but my wife was testing a bike too. You can't tell anything by going around in circles in a parking lot--at least bounce if off some curbs and hit some bumps!

502. HF Echolink Base 5371.5kHz/18157.5kHz USB

Yahoo group: BMHA
Date: 2003-09-15 07:40:55 UTC
From: ian abel
Topic: 502 Message: 502

do you operate hf from your bike?

HF Echolink Base 5371.5kHz/18157.5kHz USB

I've been running my KQ6XA-L HF Echolink station for the past week, and it has been used by about 200 operators.

I change the frequency between two HF frequencies manually:
18157.5kHz USB Day. (HFpack international calling freq)
5371.5kHz USB Night. (HFpack USA calling freq)

The station is receiving HF and sending the RX audio through Echolink all the time when there is no control operator.

Whenever the control operator is physically present at the transmitter, Echolink users are allowed to transmit (after text messaging or talking with them off the air). In a way this is very similar to running a phone patch, but it usually takes a little less PTT attention.

By adjustment of the RF gain, DSP, and Echolink VOX control, a reasonably good Transmit-Receive function is almost hands-free. It still takes a little work to keep things running smoothly. My next upgrade is a syllabic voice squelch. Yesterday, I listened to an Icom IC-746pro which has a built-in Voice Squelch, and I believe this would be a good HF rig for the application if someone wants a trouble-free setup.

Since my Echolink HF Base has been on the air, 5 other operators around the USA have set up their own similar systems, with "receive-only" on the same frequencies.

Tonight I utilized the WJ4P-L receiver on 5371.5kHz in South Carolina to assist me in hearing a low power portable station in the midwest. The station was barely audible below the noise here in California, but perfect Q-5 through the "remote-receiver".

The potential for using remote receivers through Echolink really expands the possibilities for HF communications, especially during the lower part of the solar cycle.

HFpack, the HF Portable Group, has a growing number of Echolink remote receivers going on line now. We hope to cover a wide area on the two main HFpack calling frequencies. We often have a situation where low power portables are difficult to copy, but the base stations can be heard just fine. So a network of Echolink remote receivers is a good solution for us.

503. Bicycle Mobile, Kuwait!

Yahoo group: BMHA
Date: 2003-09-16 22:31:42 UTC
From: Phil Milazzo
Topic: 503 Message: 503

I'm taking my bicycle and some radios with me for a
year of work in Kuwait.

Army MARS wants me to establish a station where I'm
working, too.

Internet access is supposed to be good, so I should be
able to stay in touch, even if there are severe
antenna restrictions.

504. BMHA member list updated

Yahoo group: BMHA
Date: 2003-09-25 14:26:37 UTC
From: slafetra
Topic: 504 Message: 504

After much delay, I've updated the online BMHA roster on the Bicycle Mobile Hams website. So new BMHA members are now listed.

http://www.lafetra.com/bmha/Content/membership.asp

As always, this is a database lookup so it should be 'unharvestable' by automated email-finders, and for privacy reasons doesn't identify street addresses nor telephone numbers.

The official website for RAGBRAI is www.ragbrai.org. RAGBRAI is always the last full week in July. There is a group of Ham's that ride each year and their team is 'Team Megacycles'. I have ridden with them for many years and may do so next year. Drop me an email after the first of the year and I can put you in touch with this group. They always are looking for Hams' that want to ride.

Mike, NF0N

p.s. the ride is great, you will love it.

Dennis,

Information is available at

http://www.ragbrai.org

Always the last full week in July. Rider tags
available by lottery from the Register. All
information is on the website. Are you planning to go
solo, or with a group?

I have been on RAGBRAI 8 times. Great bike ride. Took
the radio with me one year and met up with the fellow
BMHA'ers on Saturday. Worked some simplex and
repeaters using my FT-530 with a flag pole 300 ohm
twin-lead J Pole antenna.

I would like to go on the 2004 event with my bike club
from St. Louis. Maybe we'll see you there!

512. Titanium Bike as Counterpoise?

Yahoo group: BMHA
Date: 2003-11-25 13:13:47 UTC
From: Gary
Topic: 512 Message: 512

I've started dreaming of getting a two-wheeled recumbent to complement my quadracycle for HF operation.

In researching different materials that are used for bike frames, I was surprised to see that titanium has only 3.8% of the conductivity of copper (aluminum as 63% of copper's conductivity).

This 3.8% would appear to make titanium a poor choice for bike mobile HF operations, but that is for its pure elemental form. I wonder if anyone has used a titanium bike as a HF counterpoise or knows what the conductability of the titanium allows used for bicycles.

Gary N9MJZ

513. HF Bike Mobiles 18157.5 / 5371.5 kHz USB

Yahoo group: BMHA
Date: 2003-11-28 08:39:19 UTC
From: KQ6XA
Topic: 513 Message: 513

HF SSB Bike Mobile operation is becoming more popular lately. There is an increasing number of Bike Mobiles on the HFpack calling frequencies, and more of them are running 50W or 100W while experimenting with new types of efficient antennas. On some weekends it is now possible to QSO with several /BM operators at the same time around the country. If you have an HF rig on your bike, you might want to join the fun on Fridays/Saturdays/Sundays.
18157.5kHz USB at 1630UTC and 2230UTC
5371.5kHz USB at 0145UTC (or at your local sunset time)

True, titanium is not as good as some other metals for electrical conductivity.
But I doubt if the difference will be noticed in your HF signal. You can always improve the counterpoise situation on a composite or titanium frame by adding a insulated stranded wire or tinned copper braid that is connected to extreme points on the frame (handlebars, axles, brake levers, etc). The bonding wire can be clamped and held in place with various types of bike hardware. This may even be a good idea for more conductive bike frames on HF.

Dears,

Let me introduce all CW lovers with nice chance to meet other friends
on the bands using CW art during the Christmas event...

C h r i s t m a s C.W. P a r a d e

Sponsored by : Petr Ourednik, OK1RP

Date : 26.12.2003

Calling title : CQ XMAS
It is not real contest, but Christmas
telegraphy activity
day only !
Not to be allowed to use "test" in CQ calling.

Time : 00:00-24:00 UTC

Mode : CW only !
Pupm keys and all the paddles allowed only.
Strictly avoid to use any PC, keyboards,
decoders, K1EA, N6TR for CW generating etc.

Bands : All HF and VHF/UHF bands are encouraged.

QSOs : Between all licensed operators in the world.

Categories : No categories.

Band changing : Unlimited

Exchange code : Standard QSO contents exchange.
Not to be allowed to exchanging contest
reports only as the
contest or pile-up etc. !
Contacts should be made during normal
operating and not
as a results of pre-arranged schedules.
Christmas greetings are welcomed.

Power : Unlimited

Antennas : Unlimited

Points : Each 2-way contact counts one point.
It is only one time per day allowed to work
each station,
not depending to band used.

Multipliers : No multipliers.

Results : Simply points summary for QSOs.

DX-cluster : Not allowed !

Logs : Total points summary for QSOs and type
of used telegraphy key (paddle), all has to be
sent as gentlemen repport to: ok1rp@...
email address only.
No later than 15th January 2002 !
No any paper log or floppies etc.

Prices : Original brand new Czech Army fully functional
pump key
with engraved winner's callsign as a Christmas
C.W. Trophy for the best score in the world is
prepared now!

519. Bike Mobile Safety Suggestion List

Yahoo group: BMHA
Date: 2004-01-05 01:36:37 UTC
From: KQ6XA
Topic: 519 Message: 519

Here are some suggestions for Bike Mobile safety... try adding a few of your own to the list!

1. Wear a helmet and other protective gear.
2. Radio gear/ batteries should not unbalance the bike.
3. Riding safety is Primary. Radio operation is secondary.
4. Use a single side "open" style headset/microphone.
5. Use a handlebar thumb PTT.
6. Add streaming reflective orange flagging tape to antenna tip.
7. Wear gloves (fingerless).
8. Use your rear view mirror constantly.
9. Radio gear secured in case of a spill.
10. Stretch your muscles before riding.
11. Try to ride in areas away from cars and trucks.
12. Radio wires and cables shouldn't interfere with bike.
13. Antenna and mount should be very secure.
14. Use a "break away" connector on headset cord.
15. Radio operation should not distract rider.
16. Practice on a vacant road or sidewalk before riding in traffic.
17. Don't try to adjust rig or antenna while in motion.
18. Don't unbalance the handlebar steering with gear weight.
19. Radio cables (headset cord) should not be able to get in the spokes if they break loose.
20. Carry a first aid kit.
21. Use channel memories instead of tuning your VFO.
22. Avoid riding on gravel.
23. Know your own limits.
24. When in doubt, walk your bike or get off the road.
25. Use hand signals.
26. Assume that every car wants to kill you.

Bonnie,

I think that #26 should also be #1. Especially if you're unfortunate enough to live in a state that has no paved shoulders!!! Here in MS where I'm currently stationed, the painted white line marks not only the right limit of the lane, but also the right margin of the pavement!!!!

521. FT-90R vs. FT-817?

Yahoo group: BMHA
Date: 2004-01-06 06:24:24 UTC
From: pksheerin
Topic: 521 Message: 521

I'm considering buying a used FT-90R to mount on my bike, but am starting to consider an FT-817 instead. I'm interested in finding out how rugged the 817 is, since it would have to be mounted on the handlebars of my mountain bike. Is this a wise thing? How have people mounted it?

522. FT-817 mounting/shock protection (Re: FT-90R vs. FT-817?)

Yahoo group: BMHA
Date: 2004-01-06 19:32:25 UTC
From: KQ6XA
Topic: 521 Message: 522

I have an FT-817 mounted on the handlebars of my bent BikeE (model AT). I put a layer of closed-cell foam between the radio and the mount, for a little bit of shock mounting. The rig has been stable and dependable for 2 years of HF/VHF/UHF operation. I don't ride off pavement with it though.

If you ride a straight mountain bike off-road, I personally would suggest that you mount the radio in a bag suspended on the frame or in a pannier bag. The weight of the radio on the handlebars may make the steering less responsive than required for vigorous off-road riding. It also could subject the radio to excessive vibration.

I have also taken my FT-817 hiking and on pack animals. During the first pack trip, the internal alkaline batteries shorted through the thin plastic shield to a sharp metal protrusion of the case at the edge of the battery compartment. A lot of smoke and heat was generated. This killed the batteries, but the radio was OK. I filed down the protrusion with a miniature rotary grinding tool, and this has not been a problem since.

In summary, I recommend the FT-817 for bike mobile operation.

Bonnie KQ6XA

From: Darren
Topic: 519 Message: 523

--- In BMHA@yahoogroups.com, "KQ6XA" <xtalradio@a...> wrote:

> 1. Wear a helmet and other protective gear.

There has been research here in the UK that wearing a helmet actually
INCREASES the risk of serious head injuries to the cyclist.
I didn't beleive it at first until I was posted the findings. If I can
dig them off my HD I'll forward them on.

> 6. Add streaming reflective orange flagging tape to antenna tip.
A flourescent pennant is better than tape, Tape can get in the way
when the wind is behind you.

> 8. Use your rear view mirror constantly.
Don't forget to look forward occasionally :)

> 16. Practice on a vacant road or sidewalk before riding in traffic.
I would never recommend riding on the sidewalk (pavement) Pedestarians
and dog walkers can be more dangerous :) And they have a right to be
on the sidewalk, a cyclist doesn't.

> 20. Carry a first aid kit.
Always carry a first aid kit, even without the rig. Also a tool kit
for puntures chain breaks etc.

> 22. Avoid riding on gravel.
Most of the cycle paths/track around here are on gravel

> 25. Use hand signals.
Most of the car drivers around this part of the world wouldn't
recognise a hand signal if you gave one :)

> 26. Assume that every car wants to kill you.

NO need to assume, it's a well known fact :)

I'd add:-

Tell someone where you are going and how long you will be.

Carry a mobile(cellular) phone. Your spouse/partner might not be
licenced and need to contact you, or you them.

Wear reflective hi-viz clothing even in daylight.

Lights. If possible use them in daylight too, especially the flashing
LED type. They catch car drivers eyes.

If mountain biking, check weather forecasts.

Use sensible antennas, A 20 foot antenna on the back of a bike might get out well but it will hit trees, bridges, overhangs, POWER CABLES etc and will also be a real problem if you and your bike should part company. Think of others around you.

Try to avoid lead acid batteries. Dry/gel cells are safer and won't spill in an accident.

Place fuses at the battery end of the cable in both +ve and -ve conductors. During an accident, the last thing you want is a dead short across your battery.

All of the other points previously mentioned are perfectly valid, and I was surprised how many I did as a matter of course.

From: Rudy Marcelletti, K8SWD
Topic: 519 Message: 524

How conducted the study? Hat manufactures? Helmets have saved my head on motorcycles and bicycles (on and off road) and Alpine skiing more times than I care to remember. Make sure the helmet fits properly. A helmet should fit tight enough so that if you don't cut your hair for a couple of months, it will be almost too tight to wear comfortably==a signal it's time for another haircut! Also, the strap must be very snug under the chin. It prevents the helmet from coming off or twisting on the head--which could cause injury. If the helmet was in a very bad crash (it has crushed interior styrofoam padding, or a cracked shell) it is no longer useful and should be replaced. Another impact to the damaged portion of the helmet could be your last.

If my head hits the pavement going 20 miles per hour, it will be in a helmet. Roadrash does not feel good and pavement is stronger than my skull! Don't be a fool--where a helmet.

Topic: 525 Message: 526

Hi Jim,
I have seen the Mizuho radios on Rigpix.com and they look very interesing. There's your trail friendly radio! I do not own one of these little radios but I think the manufacturer's have come pretty close to the size and certainly exceeded the functions available on a Mizuho HT type HF radio with the Yaesu FT817. It= would be interested to see how small they could mass produce a 5W 10M-20M HF HT though. That'd be a real hot item I think. As far as antennas go I think a Hustler coil on either a Hustler mast or a homebrew mast bracketed to the rear of the frame and grounded to the frame well is about the easiest set up you can expect to find. A Hustler RM40 coil, and a mast/whip combination secured well should do fine with your little 7 mhz HT. I'd play with whip lengths until I matched a center frequency really well. A local machine shop can be a real asset to a project like this just drop by, explain the nature of the beast you'd like to build and they can help out pretty cheaply most of the time. Appeal to their experimental side. Maybe you'll make a new ham out of some poor unsuspecting metal fabricator.
73 for now.

527. Mountain Biking Antenna

Yahoo group: BMHA
Date: 2004-02-11 03:37:42 UTC
From: breckenridge_realtor
Topic: 527 Message: 527

I recently bought an HT for use in the event of an emergency while mountain biking in the backcountry. The HT came with a rubber ducky but I understand that rubber duckies are not the greatest antennas. I would like another antenna that I can take along on a ride and am looking for advice as to what I should carry.

I do not want something that remains attached to the bike which is what it seems like most people do here. So far I am leaning toward a 300 Ohm TV Twin-lead antenna that I can roll up and keep in my pack. I have also considered a telescopic antenna which could also be kept in my pack.

My main criteria are that the antenna be light and easily carried in a seat bag, backpack, or Camel water pack. My HT (a Yaesu VX-7R) can transmit on the 50, 144, 222, and 430 MHz bands.

The first thing that comes to my mind is a twin-lead J-pole. In fact, it's the only antenna that I can think of offhand that meets all of your criteria.

Costs next to nothing to build, and plans are available all over the place. Probably the #2 home-brew antenna for VHF, behind the 1/4 wave whip. Make several, and stash 'em wherever you may need one.

I use a half-wave Larsen dual-bander (2m/.7cm) on a mag mount on my rack. I have a metal plate from a round electrical junction box attached to my rear rack, to put the magnet on. The Larsen is only 37" long and 1/2 wave means you don't need a ground plane. That way I can operate while riding, but I don't tend to do so, especially on mountain trails! I do use APRS to signal my location, which doesn't require my intervention. (See how I do it with a Tiny Trak: http://www.byonics.com/tinytrak/index.html). Then my friends and family can spot me on www.findu.com.

But if you want some GAIN, and don't mind some setup time, there is also the 2m Backbacker Quad from Shoestring Antennas, and a 2m 3-elem beam from MFJ - both quite light and portable and easy to erect, and about $80.

I've got plans and pictures for that antenna. It's worked flawlessly with my VX-5R. You can mount the twin-lead inside a casing of some sort (PVC in my case) or simply tape it to a make-shift mast. I can post the pictures of my antenna on the group page if you'd like to see
them in order to steal ideas :-).

Sure, if you would like to post them that would be great.

534. Mounting VX-7R

Yahoo group: BMHA
Date: 2004-02-17 05:44:56 UTC
From: Adam Pirkle
Topic: 534 Message: 534

I was wondering if anyone had any tips on mounting a Yaesu VX-7R. I'm going to be riding a road bike about 4500mi this summer (http://www.texas4000.org/), and I'm planning to try and transmit APRS packets along the way. I plan to be transmitting from my HT to a more powerful mobile rig in one of our support vans, which will relay my packets.

What I'm trying to figure out right now is the best way to mount the VX-7R on my bike. I'm thinking I would like to mount it on the handlebars or stem, but keeping it in a frame bag of some sort is always an option.

Any suggestions?

Regards,
Adam Pirkle - KE5AGK

I don't like to mount any rig *on* the bike. Too much chance of vibration doing 'nasty' things ... and 4500 miles is a *lot* of time to do 'nasty' things. When I bike mobile with an HT I carry it on my belt (if I'm wearing 'bike clothes' I wear a belt specifically to carry the rig)

I just uploaded them to the group today. If you are signed in to Yahoo Groups, this link should take you to where I've uploaded them in the group.

http://groups.yahoo.com/group/BMHA/files/KD5VEZ/

I'm fixing up my Mountain bike to be able to use my VX-5R mobile -- the progess is slow but sure. What I need now is a RAM mount for the radio, and a reliable mount for an antenna. I'll have some of those pictures up in the next few months as the project comes along.

Hope this helps, and tell me if you come up with any new or better ideas for mounting this antenna on a bike!

Alan,
Nice pictures an article. If you get a chance snap a
picture of you standing next to the walking stick so
we can see what it looks like full length.

Thanks Phil KC2GFV

My Icom HT hangs on a loop in the shoulder strap of my hydration system. I run the extended duck antenna through another loop above that one, and the antenna doesn't get in the way. Either biking or during PS events, it's a very handy location. The mic is plugged in as well, and clips to the strap across my chest for easy access.

Adam,

http://groups.yahoo.com/group/BMHA/files/N0HZ/
Also take a look at the pictures I uploaded a while back. I use a Shakespeare squatty body marine 1/2 antenna with a little longer whip to get down to 2 metres. I mount my th-79a on the handlebars with a Radio Shack FRS bike handle radio pouch. My vx-1r fits nicely in it also. The squatty body antenna on it now has less wind resistance (noticeable in a head wind), is less top heavy and doesn't hit as much crap as sits a 1/4wave lower than the home made PVC cover J-pole I had on the bike previously.

If you want to use a J-pole check out WX2NJ's Jurassic duck and mounting at http://www.qsl.net/wx2nj/

Good Luck and post your pictures

544. HF HT's

Yahoo group: BMHA
Date: 2004-02-24 00:44:32 UTC
From: Barry Bogart
Topic: 544 Message: 544

I agree. I have a Mizuho 6m and had a lot of fun with it mountaintopping (see pix in the Six-Pack-Radio group). But I just bought a Tokyo Hypower HT-750, an HT that does 6, 15 and 40m at 2, 2 and 3w. This has more bells and whistles than the Mizuho and a lot less than the 817: No scanning or split or memories, but it does have the important stuff: RIT, variable steps, NL, pre-amp, break-in time setting... and a lock. What I like about these HTs is the form factor and simplicity. I can't imagine operating anything as complex as an 817 while riding a bike! I can (and have) operated my HT-750 in a snowstorm wearing mittens (pictures will soon be on the Mountainears Yahoo group).

So yes, a new HF HT would be great. The THP design is 10 years old, the Mizuho 20, but they are both hot performers, and easy to use. Would I like more bands, less weight, smaller size, less power consumption? Sure would! I paid an 817/703 price for the HT-750 without a second thought. If it was half the size and weight, maybe twice the power and had 10 and 20m as well, I would pay double. I don't know why the manufacturers aren't chasing this market. Haven't they heard about HFpack and related groups? Sooner or later someone will get the message and outsell the 817.

545. BMHA - An Open Letter

Yahoo group: BMHA
Date: 2004-03-01 23:15:46 UTC
From: pkmichaelis
Topic: 545 Message: 545

BMHA Members;

I'm Phil Michaelis, KC2GFV. I'm more "biker" than "hamer". I got my first bike when ten and had ridden continually until forty when stomach problems wouldn't allow me to bend over my upright. In 1989, I saw an ad for a LWB, USS recumbent and I brought one sight unseen. Saturday morning I took the big box down to the bike shop where they put the bike together. I spent the afternoon in the parking lot figuring out how to ride it. I haven't looked back since, I love recumbents. I joined BMHA, spring 2000, when I saw an article about hams on bikes. My brother had been on me for years to get my ticket, so I did. Dayton this year will be my fourth.

I was searching the BMHA back issues, a gold mine, for an antenna suitable for my new Catrike Speed. The main components of my mobile shack are an Icom T81a quad, Midland 75-832 CB (I want to talk with the truckers before they make me road kill), and a Vista Etrex GPS. While searching, it accrued to me that we haven't had a new issue for a long time, that Dayton is almost upon us with no word about this years forum and BMHA is slowly sinking in to the sunset. I do not want that to happen!

I'm appointing my self as Chairman of the "BMHA Kick in the Butt Committee" (KB). As Chairman of the KB it is not my intension to offend, alienate, hurt any ones feelings or step on any toes. My intention is to give us collectively a swift kick in our get the origination going! Hartley our founder, single handedly, gave us a fabulous origination. For more than ten year he was Mr. BMHA. Let us take the seed he planted and grow it into the premier bike/ham group that we all want and need. So, lets take the rest of this year (time limit) to get back and surpass what Hartley left us

First, a plea to the BMHA Presidency, Directors, Editor and others as constituted in the last newsletter. Please stay and serve in your current position, at least until the end of this year. A shake up in this base group, at this critical time, would mean the demise of BMHA, in my opinion. Please e-mail me confirming your intention to stay and help us regroup.

Second, and this is critical, lets go totally electronic. As hams, everyone should be technologically savvy. We have two great web sites www.lafetra.com/bmha/ operated by Skip AA6KW (271 members) and a BMHA Yahoo E-Group owned by Mike NF0N (259 members). My idea is: to Use Skip's site as our best foot forward "public forum". That is where we will have on display Hartley's first issue and the current third quarter (after Dayton) issue of the newsletter. Really, not

too different from its current make up. To use Mike's site as a "members only" site. This is where we will store the membership list, the library, committee stuff, the current newsletter and other information for the members only. Mike's site would be greatly expanded to serve the members.

Newsletter: Scott KE4WMF needs to be congratulated for stepping up to the plate when know one else would. Lets increase the newsletter staff to at least three. An editor and two assistances or sr. editor and editors or what ever the make. The newsletter is the core of BMHA and is just too much for one person, Hartley excepted. So, ok all you English majors, or want-a-bees, step up to the plate like Scott. My ides is: to publish three issues this year on the first day of each quarter. That only gives one month to get the first issue done and out by April 1st. Look back at Hartley's eight page newsletters, chuck full of good info. Not a lot of white space and great content. Buy the end of this year lets be up to eight pages plus advertisements. Lets go color except for content, black and white is easer to read. Everyone send in "articles, suggestions, letters, announcements, photos, artwork, - anything pertaining to the combining of bicycling with amateur radio." Time is short!

Membership: This committee's responsibility will be to maintain the membership list and to spearhead new membership. My idea is: to contact each and every member and potential member from the two web sites. Make sure their information is correct including e-mail address. Get this all done before the next issue is released April 1st. Then, swing into new membership mode along with maintenance and web site work.

Library: This committee's responsibility is to create a library and maintain it. My idea is: to put all the back issues on the member only site. Create an extensive, comprehensive and searchable index of the back issues. Create a listing and files of all articles that have ever been published that have any thing to do with bike/ham. Get copies of articles where possible, with permission of the publisher, or describe them fully including where to find them. Publications would have its searchable index as well.

"From the top" column: The responsibility here is to write a column to put in the newsletter. My idea is: that columns will be written by the Pres., V.P., Sec/Tres. & the KB Chair. to be publish in each quarters issue respectively. Skip would be April 1st and I would end Dec. 1st, in this year of regrouping.

"QSL Corner" and "Bits & Pieces": Start these feature again in each issue. My idea is: for each of you get your QSL card in electronic format and submit them for publication. If we publish two in each issue that will help fill the newsletter, and I personal liked to see them.

"The Pink Key" or something: Would one of you ladies like to write a column that would give a famine perspective on bike/hamming? Just my idea some one step up and run with it.

Artist and Cartoonist: Lets have a cartoon or two in each issue. Anybody out there named Walt D? We need to have some one make up letterhead stationary (electronic) for the committees and others to use when corresponding. Most originations have some kind of patch, hat or what ever. Lets get our name and/or logo on something that says "I bike/ham", maybe a pennant we can hang from our antennas.

Public Relations: This committee's responsibility is to put our best face forward. My idea is: to get our name and our logo out in front of the bike/ham public. On any type of ride across state, walk a thon or any activity that one of our members participates in needs to be publicized as a BMHA sponsored event. Get our name and logo into every bike, ham or any other publication or news media we can. This will also help in membership

Advertising: This committee's responsibility is to sell advertising in the newsletter. My idea is: to make some money and advertise products for out members. An equal mix of ham and bike stuff should be sought.

Door Prizes: This committee's responsibility is to collect prizes, bike and ham stuff, to be raffled and/or given away in Dayton. My ideal is: to have two sets of door prizes to give away at the forum. One set to members only, need not be present to win, every members name in the box to be drawn. Another set to be given to attendees, present. When vendor gives us a very nice gift, lets raffle it off and make some money. (Door prizes were very successful for the HF pack forum last year.) Lets set a goal to have collected $1.500. in prizes, by Dayton.

Dayton "Show & Tell": We have our forum and the annual Ride. My idea is: to also have a dual (two stalls together) outside booth, behind the prime real estate. We could set up a couple white tent canapés with name & logo banners some folding or stacking plastic chairs a folding plastic table. This would allow us a place to show our mobile shacks, give out handouts or flyers about our group, socialize about bike/mobile and in general hang out during the three days of Dayton. The committee would need to see that the Show & Tell was manned during the event, we could take turns for an hour or so each day, see that there was information to hand out, assemble & take down, and transportation. Perhaps someone that lives close could store it for us, between shows.

Line art, schematics & etc.: In my profession, Mechanical Design Engineer, I use Pro/Engineer CAD software. I will make up any type of line art or schematics needed to help you build articles describing your rigs. If for instance, you want to show a small sending key attached to your handlebars or an antenna setup you have. I can model it for publication in the newsletter.

Have you noticed I kept saying "My idea is:" ? Well I have been around long enough to know that "my idea is" not necessarily the best in the world. You may disagree with me and that is fine. I want to hear all the ideas you have for BMHA and to implement them. However, if you are going to just disagree with me and not offer any constructive ideas of your own, I do not want to hear it. I will be too busy implementing the fine ideas of others in this year of regrouping. I do not want to hear negative but rather only positive comments. I'm upbeat about the future of BMHA and want to stay that way.

It should go without saying that BMHA needs your help. Please, join in with the Officers and I to help regroup. Hartley was a special individual that had time to keep this all together and running smoothly. Look over the list of suggested committees and see where you might belong or add something to the list that you can do. I don't have a lot of time but I do have a little. When we add our time together we will end up with a lot of time, to get back to and maybe surpass what Hartley left us BMHA.

My e-mail address is: pkmichaekis@.... You can expect a reply.

E-mail me first, so I can collect my thoughts about our discussion. My cell phone number is 812-290-3909. Call me between 7:00 & 10.00pm EST on Mon, Tues, or Fri and on Sat. all day. Sat., However, I probable will be out riding but I will take my cell phone with me. Please call me, if I don't answer, leave a voicemail (spell name and call sign slowly) and I will call you back.

I never really got into bicycle mobiling, until I was able to volunteer for the Marine Corps Marathon.
I had a blast. What I did was mount a Radio Shack HTX-252 mobile rig on a 1975 Schwinn Road Bike (27 inch) and mounted a plastic mini dairy box on the back rack.I
The back rack served two purposes-first it held (2) 7 ah gel cell batteries to power the rig(one would do all day I later discovered), and the top lip on the plastic crate, I mounted a metal plate to support a mobile 5/8 antenna.
This plate was for drywall-electrical wire cover that I bought for 50 cents at a local herdware store. I glued the plate onto the box with Marine Glue, and the lip support fit perfectly.
It measured about 3x4 INCHES, and fit the lip of the plastic box sideways on the back end of the box , which I drilled four holes out of the bottom, and wire tied the box to the metal bike rack.
Then I installed a 5/8 wave, (2/3rd wave electrically)mag-mount to the back.
It works well, with the addition of a ground wire I soldered to the plate and ran this wire down to the lug on the frame where it screwed into a drilled and threaded hole on the frame right above the lug nut.
I also use a ICOM V-8 2 meter HT with a headset while BM.
I will next try to wire up the old Yeasu 770 single band 440 rig (25 watts) and see how I do.
If this works , I will probably go next with a dual-band(2-440) rig.
Main consideration of course is the antenna, and the antenna mfgs ARE HEARING THE BICYCLE MOBILE AMATEUR AND making antennas now to be mounted on bicycles.
With a little imagination, you too can come up with a new design.
I really didn't know if there was a club for this, until I literally stumbled on it one day while surfing.
Be careful out there-- and Happy Communicating !!!

553. is there a perfect setup? and 6m

Yahoo group: BMHA
Date: 2004-03-12 05:01:58 UTC
From: Zeb Palmer
Topic: 549 Message: 553

Hello to all.

I've recently started adding on to my bike preparing for the public service season of races, parades and such.

In the past I've been mobile and pedestrian mobile. Now, the time has come for bike mobile. I also look forward to being bike mobile up in the mountains on some of the old roads and trails.

Later this year I'll be adding aprs http://www.byonics.com/pockettracker/ right now I want to focus on 2m. I'm kinda torn though. 2m meter is a definite need. One of the areas near my house (downtown boise) is served only by a UHF repeater. But my real love is six meters... I'm active on six at home and in both my truck and wife's (KD7VKY) car. Most activity is simplex with one or two seldom used repeaters. But none the less I love six. And my wife has interest in six too. I'll be getting a couple of new VX-5's soon so portable six isn't out of the question.

You can probably see my dilemma. My perfect antenna set up would include 6m, 2m and 70cm. but unfortunately bikes are only so big.

Other than introducing myself to the group, I'd like to know if anyone on the list does 6m /bm. Or if anyone has a good way to work all three. I've considered a couple of the popular tri-band mobile antennas but I'm concerned about the ground (or lack of.) My current mount install (a 3/8x24 mount) on a rear luggage rack has plenty of a ground plane for a UHF but above that any antenna that requires a ground will require some more work.

Any thoughts?

Anyone running 6m bike mobile?

Headed out Saturday for a bit of testing.

Seven Three

Sorry, I haven't used it (and have no plans to) ... I bought it because I *may* have a use for it in the future, AND it was "real cheap"

Radio Shack also had something (now long discontinued) that might also be useful for us ... an combination earphone/mic. I think they called it Auditronic or something. The "in your ear" earphone was also the mic. I've used that for public service events when there was significant crowd noise and did not have any negative comments on the audio. When they were closing these out you could get one for less than $5 (or on eBay for $12 to $15) but they are long gone.

With the audionic earpieces, a couple of words of advice:

Don't use rechargeable batteries if at all possible. As they're only 1.2V, the xmitted audio will really begin to suffer as the battery discharges. Unlike the boom-mic units which only use the battery to trigger the VOX, the audionic units have a small amplifier in them. They don't like low batteries!! But other than learning that the hard way, everybody I've talked with says they like the audio better from them than they do the boom mic units. Which are also long gone...

Zeb,

I like you was looking for one antenna will do it all type thing. Then I got to thinking I want to get the best possible reception that I can get. The fact of little or no ground plane on a bike is a problem. I have changed my thinking to one antenna/one channel. I found an article in a back issue of the BMHA newsletter about stainless "J's" for 1.2G, 220, 440 & 2m. I called the author and ask if he could help me design me "J's" for 6m and CB, also. I have an Icom T81a, I will be using 1.2G, 440 2m, and 6m with individual antennas. And, a "J" for the HT CB a Midland 75-822. I have had good success talking to trucks and RV, so they don't make me road kill. I will be building up these antennas in the next couple of months (before Dayton Hamfest). And I'm also planning on putting an article in the July 1st issue of the BMHA Newsletter, about my ideas for Super lightweight "J's" with pictures of my rig.

Thanks, (Superlight antenna farm) Phil

557. Sixing on a bike

Yahoo group: BMHA
Date: 2004-03-16 20:52:32 UTC
From: Barry Bogart
Topic: 557 Message: 557

As a Sixer and serious cyclist, I have THOUGHT about it a lot. I have a Mizuho HT and a Tokyo Hypower HT that do Six, but I just use the whip with them unless I am stationary, in which case I usually use a free standing dipole (tent pole sections as a mast, Radio Shack whips as elements). I have THOUGHT about mounting the dipole, fore & aft on a mast attached to the back of the rear rack. The mast would have to be stiffer than my 1/2" tent poles, but still light. I guess I could fasten three of them together... just thinking out loud. The top should be 3 meters up from the ground. I wonder what it would be like going around corners?

But I have to say that if I heard anything(!) on Six, I would stop (probably faint!)! I could use the whip to monitor and then put up the dipole real quick. So I am thinking of a clamp to hold the mast on the side of the bike, flat on the ground. And for FM and vertical polarization, maybe a sideways bike could be enough of a ground plane.

Please share your experiments with this group, and post them on the Six-Pack-Radio Yahoo group too.

558. Pocket Tracker for APRS

Yahoo group: BMHA
Date: 2004-03-17 19:22:44 UTC
From: Jack R. Smith
Topic: 557 Message: 558

There's a new APRS tracker out now. I've been using a TinyTrak II and a Radio Shack HT in a tail-trunk. Kinda bulky but it works. This little gadget does the same thing but is the size of an Altoids can, plus the antenna. Looks like it'll be perfect for Bicycle Mobile APRS. I'm going to be getting one soon and using with a WX2NJ Jurassic Duck (the antenna I'm using now with the RS/TT combo).

My own notions of 6-on-a-roadbike would be something like:
* MFJ-9406 mounted with conduit straps to the handlebar
* 7ah gelcell in a toolbag hanging from the saddle
* a loaded 9' long skinny whip (close enough to 1/2 wave to not
need too much in the way of loading), or a hamstick, clamped
to the frame somewhere on the rear triangle

I'm gonna have to give this a shot this summer!

> But I have to say that if I heard anything(!) on Six,
> I would stop (probably faint!)!

Come summer, assuming even halfway decent Es openings, you'll be
doing more fainting than you think you'll be doing. :-)

> I could use the whip
> to monitor and then put up the dipole real quick.

Heck, if you're going to stop and set something up, you *might* be able
to cobble up some kind of moxon out of skinny aluminum shock-corded tent
poles that would fold up plenty small enough to live in a bottle cage.
Six meter portable with some gain and directivity would really rock.

> And for FM and vertical
> polarization, maybe a sideways bike could be enough of
> a ground plane.
I'm thinking a half wave vertical would be much less picky about the
ground situation than a quarter wave. And if it's skinny enough (say
from a really cheap CB setup or somesuch) it wouldn't detract all that

much from handling nor add much in the way of wind resistance.

Yeah, I'm friends with N7MTZ the creator of that tracker. It's been neat to see his radio go through different development phases. It's one impressive device, which has a ton of use possibilities.

Once I get all the other antennas settled on my new bike I'll be getting one of these trackers from him and adding a gps... should make a nice setup for riding old roads up in the mountains.

562. Re: Mounting VX-7R

Yahoo group: BMHA
Date: 2004-03-19 06:14:30 UTC
From: Luis
Topic: 534 Message: 562

I actually ride a Recumbent, the Sport by EasyRacers, and it's incredibly easy to mount just about ANY radio/HT/battery/antenna to that thing. But when I used to ride my old Beach Cruiser, I used to put my HT in one of those bicycle model neoprene radio holders for the FRS radios! RatShack usually sells them cheap as does WallyWorld. And for an antenna mount? I used and still do use a 'mirror mount' for CB antennas.

I used a Hamstick Colinear 2m antenna (7' long) to which I glued a fluorescent orange flag to.... Kept me from getting crunched a couple of times! The extra height would often make the difference out in the fringe areas of some repeaters when I'd only have 5 watts or less.

Since you're using the VX-7R, I'd suggest a 5/8 wave 2m that doubles as a 1/4 wave on 6! And you can still use it on 440. I'd suggest the HamStick 5/8 wave with the 3/8" connector and use a 'mirror mount' 3/8" CB antenna mount. If it's behind you, your body will cover it and produce less drag.

Maybe I'll see you out on the road someday or on the radio! Until then?

The Best of 73!

Luis KD5KJD

And for an antenna mount? I used and still do use a 'mirror mount' for CB antennas.

I used a Hamstick Colinear 2m antenna (7' long) to which I glued a fluorescent orange flag to.... Kept me from getting crunched a couple of times! The extra height would often make the difference out in the fringe areas of some repeaters when I'd only have 5 watts or less.

Since you're using the VX-7R, I'd suggest a 5/8 wave 2m that doubles as a 1/4 wave on 6! And you can still use it on 440. I'd suggest the HamStick 5/8 wave with the 3/8" connector and use a 'mirror mount' 3/8" CB antenna mount. If it's behind you, your body will cover it and produce less drag.

Maybe I'll see you out on the road someday or on the radio! Until then?

The Best of 73!

Luis KD5KJD

564. Generator Charged Battery

Yahoo group: BMHA
Date: 2004-03-19 14:48:17 UTC
From: DrRodney
Topic: 564 Message: 564

I'm relatively new to bicycle mobile operating and am just starting to outfit my bike. I'm a teacher in a school district which strongly emphasizes renewable energy sources. (We have a wind turbine and a geothermal-aided heating/cooling system.) I'm wondering if anyone has used a bicycle-powered generator and regulator system to charge a battery for operating bicycle mobile? I've noticed some 12 volt systems sold by European companies.

Topic: 565 Message: 565

(For the BMHA group and the TinyTrak group, this a TO-220 footprint switching replacement for the 78XX series regulators. VERY low power consumption. Check out the specs page: http://www.datel.com/data/meters/dms-78xxsr.pdf Been talking about it somewhat on the APRS-SIG)

I see lots of upgrades in the pipeline for me! My 7805 uses way too much power for bicycle mobile apps. Gonna have to get my hands on some of these to upgrade my tiny-traks and other goodies for my bicycle mobile setups.

I've never done it, but Peter White Cycles sells a really cool dynamo front hub, so power is generated at the hub instead of using a tire-driven generator. It's pretty pricey though, about $300 for a built wheel or $190 for just the hub.

http://www.peterwhitecycles.com/Schmidtbrochure.htm

http://www.peterwhitecycles.com/schmidt-lumotec.asp

There's also a cheaper Shimano generator hub that you can apparently get for $60 through Harris Cyclery (or $120 built into a wheel):

http://www.sheldonbrown.com/harris/lighting/shimano.html

Finally, a bit of info on Sheldon Brown's site about dynamo hubs:

http://www.sheldonbrown.com/dynohubs.html

569. 2m / 70 cm Antenna for Bicycle Mobile

Yahoo group: BMHA
Date: 2004-03-20 04:53:48 UTC
From: Harry G. Seyfert
Topic: 569 Message: 569

Hello,
This is my first posting to this group.

I am interested in crafting a good antenna for Bicycle Mobile operation. I have know some who have used a J-pole with good success. I seem to recall examples in previous issues of BMHA newsletter, but I can't seem to put my fingers on any. Ideally, I would want both 2m and 70cm bands coverage, but 2m will bee good, too.

Thanks,

Harry, WD9FYF

My first post, too.
I use a regular dual-band mobile antenna, the Comet SBB-2. I ride a Wizwheelz trike and put the antenna on the rear rack. Coax runs up to the front, Kenwood TH-F6 attaches to the water bottle rack. If I ever find a "shorty" tri-band antenna with 220, then I'll be able to use the F6 to its full potential. Not too worried about the ground plane; there's plenty of metal in the trike and an HT is built to work with a duck (which has no ground plane to speak of.)

On my ATB, I use a WX2NJ Jurassic Duck. Works real good, and makes a handy safety flag mount, too. Not too good in low branches, though. Tends to come back and slap me in the back! You do have to mount it to a rack, too. Again, I don't have a problem with that as that's where I keep my radio and battery. You can find details at http://www.qsl.net/wx2nj/ He doesn't mention it, but I've used mine on 440. Many of the twin-lead j-poles work well as dual-banders. If you do try it, use low power for your testing on 440, just to make sure.

The problem with all bicycle generators is power output.

6 watts seems to be the best these generators will do, if you can ride
at over 15mph.

Does anyone want to contribute the power consumption figures for their
rig for comparison.

An Alinco DJ-191 operating at 5W output requires about 12W of input. (12V * 1A). Most HTs have similar requirements at 5-6W, but will operate at lower power levels. In order to operate off a 6V/6W Shimano generator, you'd need a battery for surge demand (key-up), and a step-up power supply. A switching type supply would be recommended since they're much lighter and smaller than a transformer type. Using a set-up like this would allow the battery to be charged during receive and then to be able to handle the excess load during transmit.

575. Dynamo power

Yahoo group: BMHA
Date: 2004-03-22 18:51:39 UTC
From: Barry Bogart
Topic: 575 Message: 575

I have thought about using a bike dynamo to power a radio, but haven't tried it yet. I usually ride all day (Randonneur), so I use solar power instead (an ICP iSun).

As far as dynamos, the hubs are nice, but heavy and pricey - and there is always a little drag. And of course you might have to replace your wheel because of the diameter. I prefer bottom-bracket or sidewall uints. I was one of a group doing Paris-Brest-Paris testing a sidewall one from Switzerland called the 'Litespin'. I got mine from the factory but these guys have it: (http://www.yellowjersey.org/litespin.html). I highly recommend it because it is so efficient - not more power but less drag. You can hardly tell it is turning, and it is very quiet. If you give it a spin with your finger, it runs about 15 a seconds before it stops - that is how little resistance there is. My only complaint is that it is a little larger and heavier than most dynamos, but then it is built to last.

When I get a chance I'll put a 'scope on it and see hwo well regulated teh output is. They warn you not to go over 60km/h but I tested it up to 75 (going down soem long hills) and teh voltage seems to have flat-topped pretty well or the bulb would have blown.

It seems to me that a bike frame should offer a reasonable counterpoise for
a 6m whip. A quarter wave on 6m is only a little over four feet in length.

580. 2 meter Bicycle Mobile mag-mount antenna

Yahoo group: BMHA
Date: 2004-03-30 04:15:10 UTC
From: kg4rrn
Topic: 580 Message: 580

I found a great way to mount the mag-mount two meter antenna.
You get a small plastic milk crate-1/3 the size of the regular one, which can be purchased at a office supply store, or bed, bath and beyond,and I bought a metal wallboard plate made out of a metal such as a wallboard electrical line stopnail plate at the local herdware store.(it fit perfectly) It must fit the bucket or this will not work.
7 inches X 5 inches.
This was glued(epoxyed) to the top lip of the bucket, and a small gauge wire was soldiered to the plate(which has small holes in it, and run down the back of the rack support to the back wheel bolt and screwed into the threaded hole above where the back of the bike rack support is located.I have a Schwinn Road Bike ...With the plate holding the mag-mount antenna and the wire secured to the frame,as a ground plane, VSWR is 2.5, but still below 3.0 and the rig (I used an HTX-252 Radio Shack 2 meter mobile , 25 watts), similar to the FT-90,except 2 meter only, works all local repeaters in the Washington DC area within 10 miles of my QTH,
and performs fairly well and has not fallen off yet!

(I was able to bring up a repeater 40 miles away, and it was full-quieting, but the repeater antenna was 1800 feet up in the air !)
This is not true when bicycle mobile, standing still-- I swear by it)

I used this set-up of a mobile radio bracket which is wire tied above sticky glued velcro, around the handle bars first, then the bracket,
then the wire-ties, and radio normally screwed into the mobile mount.
One note, make sure you use a steel arial rod radiator, not fiberglass, which will whip your back if you are mounting a fiberglass whip(literally).
Also, the ideal dipole length is 19" give or take a couple of 1/16ths,.
Use a antenna tuner and tune it for frequency, and you are ready to go ! I also have just enough room to slip in the batteries, and the length of the coax for mounting this will have to be shortened considerably to 4 feet or less. I also wire-tied the coax thru the top of the frame , leave slack for the Rg-59 male connector, and run the coax back to the antenna , which, when the bucket is wire tied to the top of the rack also with wire-ties and has not come apart in over a year of riding...
The other purposes of using the mini-milk crate is to hold my two 7ah gell-cells, and to clip my red-light LED reflectors to the top lip, so cars can see you at night.
I tried to upload a picture, but it would not go.
this could even work on 440... waiting to see...

I don't like the idea of a ground plane antenna on a bike.
73,
Bob, KG4RRN

Are you attending the Dayton Hamvention? Are you interested in sharing your special project, talking about it at the BMHA forum? We need one more good person to share with the group at the Hamvention forum. It is Sunday, May 16th at 10:15 am. Please contact me and I will be sure to get you on the program.

Mike, NF0N

ALL BMHA ,
Added 2 pictures (large jpg.) in FILE section ,of my 2- meter mobile installation.
This Radio Shack mobile is the last model sold before they quit selling them altogether.
It is the HTX-252 25 watt mobile.
I have this connected to a mag-mount antenna and 7ah gell cell in the red bucket,
lasts all day .Pictures taken at the Marine Corp Marathon.
I suggest 10 watts(LOW POWER) for repeater operation.
This is the only mag-mount I have seen...
Seen some real nice rigs and pics from others who have posted.

Topic: 585 Message: 585

Hi Gang, N9GSU here.....

My partner and I are doing the Tour de Cure, ride for Diabetes, on June 5th, in Indianapolis....just wondered if any other BMHA folks might be interested in joining my team? (Or making a donation LOL)

I have set up a website where you can join my team if you'd like....or, if not, where you can make a donation if you'd like.

Seriously...I'd really like to have some other Bicycle Ham Radio Folks join us! My partner (Elaine) and I are picking up our new Tandem next weekend.....this will probably be the first group ride on it.....hope perhaps some of you can join us!

That site is: http://tinyurl.com/2ean8

BMHA Forum at Hamvention 2004!
May 16, 2004
The 14th annual BMHA forum is set for Sunday, May 16th at 10:15 am in Room 3. This is next to the location we have held the forum the last few years. We have been allocated only one hour from 10:15-11:15, but as in past years, we can meet in the hallway outside the room until time to officially meet in the room. This arrangement gives us plenty of time to socialize and exchange ideas. Russ Dwarshuis, KB8U, is our forum moderator this year. There will be some new details about the changes in BMHA and both new and old newsletters will be available. Be sure to check the BMHA Website http://www.LaFetra.com/BMHA/ for any last minute details.

The Annual Hamvention BMHA Bike Ride is on May 15th. Make plans to bring your bike and ride with us. Look for details on the BMHA website http://www.LaFetra.com/BMHA/.

Mike Nickolaus, NF0N

588. Mobiling with an HT

Yahoo group: BMHA
Date: 2004-05-04 16:34:18 UTC
From: K0HB
Topic: 588 Message: 588

I'm not a BMHA member, just an old duffer who found your email list. Ride perhaps 25 miles a week on average just for exercise (the Dayton "easy 27 miles" mentioned in the online newsletter would require me to go into training for about 2 months to get ready!), don't wear spandex, ride a cheap $400 Marin "Redwood" model K0CKB bought me for my birthday couple years ago. So you can see I'm not a candidate for club membership. Hope you won't kick me off here for that.

Anyhow, here's my question. I have a Yaesu VX-5R which I carry on my belt when riding, more as a safety thing than anything else. Would like to find a small headset (earbuds, maybe) and throat mic or very small boom mic, and a PTT switch that I could velcro to the handle bar.

Anyone have a source of such a thing?

Thanks,

73 de Hans, K0HB

590. Re: [BMHA] Mobiling with an HT

Yahoo group: BMHA
Date: 2004-05-05 15:15:41 UTC
From: Harry G. Seyfert
Topic: 588 Message: 590

Hi Joe,
I also use a Yeasu VX-5R while pedaling. I alternate between wearing mine on my belt with a pair of BNC 90° elbows so my high gain flexibla antenna won't poke me in the side and dropping it in a side pocket on my Cannondale handlebar bag. I don't have a VOX or external PTT button. I use their speaker-mic and clip it close to my shoulder (collar, hem of my reflective vest or just my tee shirt) for easy access and ability to hear the audio. VOX isn't so good due to wind and breathing. Sometimes, I will clip the mic to the map case on the handlebar bag, but in city traffic, the road noise nearly obliterates the radio. I would be a bit concerned about earbuds, etc of blocking the traffic and for some reason, the mind tends to lose concentration on traffic and focuses on the radio audio. You can tell the obvious difference in the driving behavior of those using cell phones vs those talking on radios with speakers on the receivers.

As for antennas, I am about to construct a "J-Pole" for my bike. A few friends have them and really like the results.

From: ROBERT A RICE
Topic: 588 Message: 591

Hi Gang of BMHA,
I also use a Icom v-8(belt clipped) with a single ear headphone with a double plug so that it would be capable of being heard out in the wind--and be safe enough to hear emergency equipment behind me, I ride pretty fast.
The other day, I was riding down the road, through Tysons Corner, and near the Capitol Beltway (Rt. 495) and actually enjoyed talking on my Radio Shack (r)headphone, (Part # 21-1898) which is great for my Icom V8 HT, because I don't have to run the volume control on my HT up very much, say a 2 or 3, and then adjust the volume control on the headset box, which clips to my belt, and has the PTT swith on top of it.
It also has an added bonus which you can plug in a walkman or cd player audio to the control box through a 1/8th inch jack and listen to the radio or cd between calls.
The unit is sturdy(including the boom mic piece), (I have had this now for a year, and have used it in public service events.) and is perfectly legal to wear(in VA).
If you don't mind wearing a real headphone under your helmet that is....
Hope this helps-73,

I would be a bit concerned about earbuds, etc of blocking the traffic and for some reason, the mind tends to lose concentration on traffic and focuses on the radio audio. You can tell the obvious difference in the driving behavior of those using cell phones vs those talking on radios with speakers on the receivers.
(rest of message mercifully snipped)

Not a fair comparison ... not quite apples and oranges. but to do a fair comparison you need everything as close to the same on both sides except for one part (loudspeaker vs non-loudspeaker)

Folks on cellphones are running *full duplex* while those of us on ham radio are running *half duplex*. To me that is a *major* difference. When we are actually talking on our radios nobody can talk back to us. Our mind does not have to reserve a part to listen, as well as talk. All we need to do is talk (and ride/drive)

Anyway ... when I do bike mobile I use a single earphone with a latching PTT ... works for me.

To get this pointed back at my query......

Does anyone know a source for a headphone/mic combo, single or dual earphone/earbud, throat or very small boom mic (with a PTT which I can mount on the handlebar) for a Yaesu VX-5 HT. I don't ride in traffic, only on biking/hiking trail system, so the notion of being unsafe on the street is a moot point.

Thanks,

595. RE: [BMHA] Mobiling with an HT

Yahoo group: BMHA
Date: 2004-05-05 17:18:50 UTC
From: Joe Hoepfner
Topic: 588 Message: 595

Harry,

I ride too on the trail system, but sometimes on the roadways. I primarily use my Kenwood TH-7 as it is higher power and sometimes when I'm by the river on the trail, I need the higher power. I use the headset microphone that Kenwood puts out. It has one ear bud and I can adjust the mic where I want it. As for antenna, I have a bracket that I had made which attaches to the rear rack. I then put a 3/8 32 mount on that. You can get these at radio shack. I ran a 2 meter counterpoise (for ground radials) along the frame and rear forks. I then ran the coax up to the handlebar bag where I keep the radio and run it through an adapter so it will work with the SMA plug on the radio. This mounting of the antenna, now allows me to either use a 1/4 wave dual band antenna, or I can use a single band antenna. I went this route, as I thought that someday, I might like to try bicycle hf and having a 32x3/8 mount, I'd be able to put a hamstick or similar antenna on the bike.

As for what you are looking for, I have seen them in the most recent MFJ catalog. They have them with earbud mics, throat mics, boom mics, just about any type for any radio that you want.

I'd check with them first.

596. Re: [BMHA] Mobiling with an HT

Yahoo group: BMHA
Date: 2004-05-05 18:02:30 UTC
From: Rudy Marcelletti, K8SWD
Topic: 588 Message: 596

Use a hydro pack and clip your little HT (VX5, VX2, FT50, etc) to the shoulder strap. My hydro pack has horizontal loops on the shoulder strap for routing the drink hose through--use the other side. One ear phone works well as does a speaker mic clipped high on shoulder. I use this set up off-road and on-road. It works much better than on my belt (I have fallen on my VX5 before--it hurts) or in a bag on the bike.

Subject: [BMHA] Mobiling with an HT

I'm not a BMHA member, just an old duffer who found your email list.
Ride
perhaps 25 miles a week on average just for exercise (the Dayton "easy
27
miles" mentioned in the online newsletter would require me to go into
training for about 2 months to get ready!), don't wear spandex, ride a
cheap $400 Marin "Redwood" model K0CKB bought me for my birthday couple
years ago. So you can see I'm not a candidate for club membership.
Hope
you won't kick me off here for that.

Anyhow, here's my question. I have a Yaesu VX-5R which I carry on my
belt
when riding, more as a safety thing than anything else. Would like to
find
a small headset (earbuds, maybe) and throat mic or very small boom mic,
and
a PTT switch that I could velcro to the handle bar.

Anyone have a source of such a thing?

Thanks,

73 de Hans, K0HB

597. Re: Mobiling with an HT

Yahoo group: BMHA
Date: 2004-05-06 14:41:29 UTC
From: Darren
Topic: 588 Message: 597

I run a VX-7 mobile all the time. The rig is only off the bike when being charged.
The rig fits onto an adapted fork type mic bracket using the button on the back to hold it in place. The rig is also kept in it's case.
I used a single earphone headset with a boom mic with a fitted wind shield (foam)
The headset's PTT control also has a socket for an external PTT switch. This switch is mounted near the right hand handlebar grip withing easy reach of my thumb.

The antenna is a Diamond Dual bander fitted to a home brew bracket on the rear rack.

I have great reports with this set up. I'm told that audio quality is very good.

As others have said, I wouldn't recommend ear buds. A single ear is fine, as it keeps the other ear open so you can hear what's going on around you.

One small hint for bike mobile operation. Set your time out timer!
I've done this, but only after blocking my local 2M repeater for 1/2 hour. I accidently hit PTT without realising and blocked the repeater. Strong signals could get through, but I blocked it for most :(

It didn't go down well! :)
Since then I've set a TOT to put the rig back into RX after 90 seconds. It's saved my bacon a few times since then :)

598. BMHA Website updates -- Index of newsletters, survey, and more

Yahoo group: BMHA
Date: 2004-05-17 03:04:43 UTC
From: slafetra
Topic: 598 Message: 598

For those who are interested, we have updated the BMHA website at
http://www.LaFetra.com/BMHA

A major new resource is that we now have a searchable on-line index
of every article in the entire 47-issue history of the BMHA
Newsletter. Customized views include:
* Listing of every article in a specific issue
* Listing of articles by topic
* Listing of articles by author's callsign
* Listing of articles by author's name
In addition, you can list all articles sorted by any of the criteria
above.

There are also thumbnail previews of each page.

If this is not sufficient reason to go visit the website, perhaps we
can "sweeten the pot" by giving you an opportunity to take the
newest BMHA survey (and view the results-to-date in realtime).

600. Updated images of the newsletters

Yahoo group: BMHA
Date: 2004-05-17 20:01:00 UTC
From: slafetra
Topic: 600 Message: 600

In response to feedback (already the new survey on the BMHA website is producing results), We have changed the newsletter images.

We increased the size (and decreased the quality) of the newsletter page images which are displayed by the interactive article index.

The issue is one of image size and server space. This new tradeoff (larger image, but lower quality) results in something which is easier to read.

We have now increased the quality of the newsletter page images on
the website. You should now be able to look up an article and read
it fairly comfortably.

http://www.lafetra.com/BMHA/Newsletter/Newsletters.htm

We are still working on putting top-quality (megabyte sized) images
onto a newsletter CD. Stay tuned for more details.

Welcome to BMHA Pierre,

Being carless is actually a good thing. If you've ever seen an issue of Adventure Cycling you've seen several who get along quite well. I've done 2-meter on the bike, but I've never done CW...yet. I know a truck driver who does CW on the run. He has a paddle that attaches to his wrist with velcro and his is able to shift gears and chat at the same time.

Hope to hear from you again.

From: Barry Bogart
Topic: 604 Message: 604

Bienvenue, Pierre!
I cycle tour around France at least every other year,
although next year I am planning to ride the End to
End in the UK. My brother owns a place near Calais and
I usually base myself there. In 2001 I took a 5w 10m
HT with me but was unable to work anybody from there
with my whip. Next time I'll take a Buddipole, but I
wondered how much 10m activity there was there. I
realize there aren't many hams in the Pas-de-Calais!

> with my whip.

I sometimes use a RCI-2950 with a 5/8 whip + fake ground attachment mounted way back at the rear of the bike, to do 10m, but I find it's not very effective at all. Particularly, over 2 or 3 Watts, I seem to get a lot of RF feedback, so that the whomever I qso with gets a loud EEEEK when I press the ptt. The coax and antenna are tuned properly, so I reckon the rtx is just too close to the antenna on a bike. No problem in CW however :-)

But it's just not effective, so I've given up on that. What I do now is lug my mobile station (which is a big waterproof box with all my gear in it, a foldable table, foldable chair, a foldable tripod and mast, and a 1/2 wave antenna) in my trailer up some remote hill, settle down for a day and do my hamming in good conditions, under the big blue sky, until the battery runs out.

10m activity is a little anecdotic around here, nothing like 40m. But you can find decent enough activity when there's good propagation.

It's a lot easier here in ole Europe. When I was living in Utah, I wasn't carless because it was quite impossible practically, but I tried to use the car as little as possible, and it wasn't very convenient.

> I've done 2-meter on the bike, but I've never done CW...yet. I know a truck

> wrist with velcro and his is able to shift gears and chat at the same time.

My solution to do CW on the move on my bike was to hack my Shimano XT brake/shifter combo levers (http://tinyurl.com/2b4o2): you normally shift by moving the brake lever up and down with those, but if you depress the levers lightly, they'll move down 2/3mm without shifting because of the normal play in the shifting mechanism inside.

What I did was glue a switch under each lever, and connect them to the iambic keyer. Then I could tap the brake levers and do dahs on the right side, and dits on the left side. It worked quite well, and I could key up to 20wpm reliably on flat roads. The only trouble was that it was sending garbage when downshifting, but that wasn't really a problem because I found it quite hard to do CW on anything but long flat stretches of empty roads anyway.

A friend of mine has a Hi-Mound MK-706 paddle mounted on his right bullhorn, with the springs tensioned to the max, and a lot of spacing in the contacts to compensate for road shocks, but it doesn't seem to work as well. His solution is a lot less expensive than mine however, Shimano XT brake/shifter levers go for EUR 150 around here.

From: Darren
Topic: 607 Message: 607

I'm thinking of changing my trusty old steel framed bike for an
aluminium model.
I will have to bolt on my rear rack, antenna mounts etc to the new
bike, but I was wondering if ther will be a change in perfomeance due
to the change of metal.

Has anyone noticed a chnage from going fromm steel to aluminium?

I'll need to know before I take the plunge.
TIA

Hi Darren,

Changing from steel to aluminum. I don't have any personal experience, but they tell me it rides rougher, less give, they say. But, if I were you I would contact the technical editor, John Schubert, at Adventure Cycling. His email address is: (schubley@...). I'm certain he covered that subject a couple of years ago.

Good luck at whatever you decide. Keep us posted.

For Bob Rice,

Is your magmount a 5/8 wave antenna? I've used a 5/8 wave mounted on truck mirrors like a CB antenna, but I used the front of my trailer as a ground plane. It was a little far back, and made a vertical pretty directional, but it worked. How do you make yours work correctly?

I've had good luck using a j-match, where the stub provides the plane.

Thanks Bob. I will use my existing rack as my antenna mount bolts directly to it and is very stable indeed.
I normally run just on V/Uhf with my VX-7R. A waterproof rig is a must for bicycle mobile in the UK :)

A do take my FT-817 out with my ATX driveabout antenna. This works well and the antenna is solid.

I'm more worried about the ground effect of aluminium.
Is steel a better ground than aluminium? I know that antennas are made from aluminium, due to weight, but how does it compare to steel for being a decent ground?

I doubt if this will affect my V/UHF working, but it could make a difference to HF operation.

> being a decent ground?

The aluminum itself will work fine as a ground. The metal itself is a significantly better conductor than steel, though not as good as copper (or silver, which is better still) for a given gauge of wire or whatever. Either is likely to be much better than a carbon fiber frame; the carbon itself is a reasonably good conductor, but the resins that bind it together are not.

Some resistivity figures for bicycle frame materials, from http://hypertextbook.com/physics/electricity/resistance/ -- these are in nanoohms.

Aluminum 26.5
Steel (plain) 180
Steel (stainless) 720
Titanium 390

The problem with aluminum is getting a good electrical connection to it. Aluminum oxide, which forms readily as a skin on anything made of aluminum, is an excellent insulator -- its resistance is 10^14 ohms (for the same units of material as the resistances in NANOohms above!) Attempts to use aluminum for home wiring have suffered from this problem; quite a few fires have been caused when large amounts of current were run through junctions that turned into insulators.

I don't have any suggestions readily at hand for doing this. I only do VHF on my (aluminum) bicycle, and I use a 1/2 wave antenna, which is supposed to be ground-independent.

Thanks Mark for the in depth reply. I will take special heed of the warning about Aluminium Oxide. I used to suffer this problem years back on my 11M antennas.

> though not as good as copper
> (or silver, which is better still)

I thought of a silver bike but it might be a little too heavy and expensive :)

I wasn't sure if aluminium was a better conductor than steel. I know now.

I think that my mind is made up.

Where I live, there's the Canal du Midi (http://tinyurl.com/2dekq).
The old barge-pulling paths on each side of the canal are now used as
cycle paths, and around the city of Toulouse, there's a 80km stretch
that's been covered with asphalt. It's very flat (save for when the
canal changes altitude at the locks) and quite desert during weekdays.

Hello Darren,
In reply to your last post, I believe a aluminum ground plane is more effective, however, steel is harder and more stable under high wind loads.
I have a aluminum ground plane here at the QTH, and it has worked well for
the past years.
I suggest you use whatever gets the signal to propagate better, whether it be a j-pole,
tower vertical, ground plane, yagi, beam, or discone.
This is the part of the hobby that I love, because it is exciting to see which frequencies work best on which antenna.

618. Re: [BMHA] Magmount

Yahoo group: BMHA
Date: 2004-06-06 13:12:22 UTC
From: ROBERT A RICE
Topic: 607 Message: 618

For N7NET:
Yes it is-- a steel whip 19", and has a very strong magnet.
see file pic.
I used it for the Marine Corps. Marathon last year, with a 25 watt Radio Shack 2 meter mobile rig powered by a 7 ah gel-cell. Works great, but the weight from the battery in the plastic box is the main problem.
The weight from the battery tends to slow you down, but lasts all day.
It also attached a grounding wire from the lightweight conductive wallboard plate to the top of the plastic box(this is the metal ground plane), sealed with epoxy, and I ran a separate ground wire to the frame.
I believe this is what make it radiate so well, but it probably is directional.
It is a steel bike road bike but with aluminum parts and wheels.
It is one of the most lightweight road bikes Schwinn ever made, and is 30 years old.
A VX-7 sounds perfect for the average BM enthusiast.
I wonder about battery power though......
It would be interesting to try a antenna experiment to see who could build an external all-mode antenna which would propogate on 10m-6m-2m-and 70 cm .
Next, we should try to see what kind of radios-old and new work the best.
73 ALL,
Bob,KG4RRN

619. VX-7 battery life WAS Re: Magmount

Yahoo group: BMHA
Date: 2004-06-06 14:59:07 UTC
From: Darren
Topic: 607 Message: 619

--- In BMHA@yahoogroups.com, ROBERT A RICE <mrrobertarice1@j...> wrote:

> A VX-7 sounds perfect for the average BM enthusiast.
> I wonder about battery power though......

I do a 12 mile bike ride most days. It takes me exactly an hour to do.
For most of the time I am ragchewing on the local repeaters.

My battery last for at least two rides before it needs charging, and
that's running 5 watts.

That not bad for a battery the size of a box of matches :)
I can run a 7Ah battery but I rarely need to. The big battery only
comes out when I'm running my Palm GPS system or I'm going on an
extended ride.
I sometimes use it to power the bikes lights if I'm going off road or
county lanes at night. I don't do this very often. Too energetic for me :)

620. Bicycling in France

Yahoo group: BMHA
Date: 2004-06-06 22:08:47 UTC
From: dl3naa
Topic: 610 Message: 620

Hi!

You can also travel at the river Rhine where the ways are also very flat and it is fun to bicycle! Between Wissembourg and Bale (HB9) it is about 200 km way only for cycles and so you see a lot of interesting towns in alsace (Strasbourg being the most famous).
It is also a good region for being Bicycling mobile as there are a lot of repeaters in France and Germany which can be easily reached (on 144 and 430 Mhz).

Have fun!

Peter DL3NAA

Yahoo group: BMHA
Date: 2004-06-08 17:29:28 UTC
From: Glenn
Topic: 607 Message: 622

I'm Glenn, KC4SJU, in Kill Devil Hills, NC. I'm new to the group, and looking for pointers and tips to get started using my 2meter handheld (HTX 202) with a bicycle. I haven't even bought a bike yet. I'm not much of a solderer, so I'll even need help with that part of the setup if a setup requires it (I know, I need more hands on experience...)

I also have a 10 meter mobile, (HTX 10) but that rig would likely be too hard to mount onto a bike, let alone finding a way to power it.

If anyone can help point me in the right direction, I'd appreciate it

Glenn

if I can make a small "plug" here, my business produces and sells self guided audio tours for the Outer Banks...in other words, funny you should ask...lol

there are at least 2 legends as to why Kill Devil Hills, or KDH, as the locals refer to it, is called what it is called.

First off, the hill at the site of the Wright Brothers Memorial (national park) is called Kill Devil Hill. It's about 90 feet high, and is where the brothers did glider testing in the years 1900 through 1902, before making the first powered flight from level ground, in 1903.

The hill got it's name, so says one legend, as a result of Kill Devil Rum washing up on shore one day from one of the many shipwrecks that happened offshore here (400+ along the coast of NC). The locals at the time, many years before the Wrights came here, decided to have a party and celebrate...

The other legend is that a local man made a deal with the devil, and was to meet the devil at that hill at midnight, to meet his end of the bargain. But he changed his mind, and din't want to do it. So, he dug a deep hole into the hill, and when the devil showed up, he buried him there. Guess it's a good thing that there's a 60 foot tall granite obelisk on top of the hill now...lol

in either case, the town, incorporated in the 1950s, was named for the hill, and the surrounding sand hills nearby

sorry for the length...

CW while riding is perfectly possible, although not with a regular paddle or key, and probably not with a non-suspended bike. You'd be surprised what a full-suspension downhill MTB with 2.50" tires at 35 PSI can do on normal road surfaces :-) Good thing the tire knobs make rolling noise, otherwise you'd think the bike doesn't actually touch the ground.

632. Re: [BMHA] new to the group

Yahoo group: BMHA
Date: 2004-06-09 23:02:51 UTC
From: Harry G. Seyfert
Topic: 607 Message: 632

Hello Glenn,
I used a HTX-202 for some time. I had two methods. First, was to put it in a side-pocket of my Cannondale handle bar bag and use a speaker-mic. The other, was more detailed and the pieces came by way of a couple events. First, I bought a Radio Shack bicycle radio that mounted at the center of the handle bar by way of an included bracket. After passing over just a few local railroad crossings, the radio became permanently separated from the bracket. At a ham-fest, I found a bracket for holding a cell phone that could be affixed to the radio bracket. It holds the radio quite well and in a position for viewing the display. I took extra measures and applied an old velcro-type pant leg strap around the radio and cell phone holder to keep it in place. However, the rigid mounting and my preference for a high gain flexible antenna causes the female center connecter of the BNC to wobble open or nearly so.

As for the 10m rig, I have a friend who operates bicycle mobile with one of those small, 25W 2m rigs mounted to his bike and powers up with a small motorcycle battery and has a charger at home to keep it going. I have not yet seen his actual mounting yet, but have worked him several times. Be sure to make very good, tight electrical connections and be sure the ground side of the system has a good connection with the frame!

73,
Harry, WD9FYF

Why Not?? CW is not difficult in many environs when the op is comfortable with cw. The trick on a bike, while moving, is likely the bouncing of hands on the handle bar.

Many handicapped hams have learned to do cw as well as control a rig using less-than-conventional meathods that we could employ, say the blow-tube for instance. It takes imagination.

As a starter, how about a simple spring loaded clothes pin? One could fashion contacts on the "working end" so that biting down on the "squeezing end" makes the tune of "CQ BM".

Great insight, Leonard. The trick is being comfortable with CW. Once that part is licked there's a way.

From: Glenn
Topic: 607 Message: 636

Thanks for the reply!

The repeaters in this area might not require me to have a huge antenna, and I've even considered the possibility of one of those vests that has a "chest" pocket" for a radio.

No train tracks on the Outer Banks, and the only "dangerous" bumps would be speed bumps in some of the parking lots. So vibration shouldn't be much of a problem here.

As for the grounding of the antenna, I may see if someone here can help me with that, as I never learned how to solder, and my knowledge of antennas is limited. I'd like to learn, I'm just afraid I'm going to fry components somewhere lol

From: scott laughlin
Topic: 607 Message: 637

Hi Glenn,

Quarter-wave antennas have a sharper reaiation angle than a 5/8-wave. That works really well for mountain top repeaters.

About ten years ago I used to listen to a newspaper man pedal to work along Eugene, Oregon's Willamette River paths as he QSOed with a former newpaper man who'd lost his sight.

The trip was daily and about twenty minutes in length (I think one of the BMHA newsletters may have that account.

The cyclist carried a 2-meter in his jacket pocket. The antenna was a rubber duck fittled to his helmet. Each morning we learned where the homeless had moved, who was new to the group, and who was missing. Of course, Harry, KA7YNB (or was it nyb?), lived for this daily window to the outside world. And so did I.

None of us ever broke in--and there were many of us listeners--because this was Harry's priviate, one-on-one time. Harry is gone now, but his memory lives on.

Hi Scott!

I am using a homemade QRP-transceiver "Small wonder" sold as a kit (http://smallwonderlabs.com/swl_swp.htm). It is only 20 meters/CW running about 2 watts output. My power is from a battery used for model airplanes (13.8V / 2Ah) which is enough for about 2 to 3 hours normal working before I have to recharge it. My key is also homemade sensor keyer (http://www.kent-engineers.com/ELECTRONICkitINFO.htm) which has the adventage that there are no springs and other mechanic sensitive parts. I have two antennas which I can use: Normally I use an ordinary monoband mobile whip (2.80 meters high) which can be divided in two parts for transport (no problem to attach on the upper pipe of the frame while riding). This antenna is too big for using it while biking. The other antenna is an Multiband portable ATX-1080 (http://www.wimo.com/cgi-bin/verteiler.pl?url=antporthf_e.htm) which is about 1.60 meters high and can be used while biking without any problems. This antenna is about 3db worse than the "big" whip but it can be collapsed to put it in my Backpacker bag.
Well about doing CW while biking: It is possible and I have tried it several times but I must say that there are problems with logging and also in Germany it is prohibited to use earphones in traffic. Doing morse code isnt such a big problem if you are doing a lot of CW anyway (I am active in CW for 23 years now and also member of QRQ-clubs like HSC and VHSC) if the surface of the road is ok and if there is little or no traffic. Nevertheless I prefer stopping at a nice location and doing my QSOs there. I can be QRV within 2 minutes (just opening my handlebars bag and putting my antenna on the carrier). I much prefer it this way so I can enjoy the nature listening to birds and so on and it is also much better because I do a lot of my trips together with my girlfriend.... :-)

You can see some pictures at
http://groups.yahoo.com/group/BMHA/files/DL3NAA/

and also at
http://groups.yahoo.com/group/BMHA/files/DL3NAA/HB0-DL3NAA-p/

At Liechtenstein (HB0) I managed to do about 20 contacts in two days but unfortunetly only Europe because this small country is very mountainous to the west and the east and therefore no contacts with USA were possible. Nevertheless I had a lot of fun working other QRP-

stations and people who are astonished to have contact with a bicycle station :-)

USA were possible. Nevertheless I had a lot of fun working other QRP-
stations and people who are astonished to have contact with a bicycle
station :-)

642. Another Newbie

Yahoo group: BMHA
Date: 2004-06-12 22:10:16 UTC
From: Lauriann Bradford
Topic: 642 Message: 642

Hi Everyone, boy was I excited to find this group! My name is Lauriann Bradford and I currently have a Kenwood TH-F6A hh that I have mounted to my Pogliaghi upright. I have a MFJ boom mic and the ptt switch attaches on my handle bars right near my right brake lever. I have run a Hustler 150 whip antenna, but forget whether it is a 5/8 or 1/2". I am still trying to understand antennas and am a pretty new ham. I am currently a tech, but have passed the theory test for general and am studying the code and extra class theory. I haven't spent a lot of time studying because I have so many "irons in the fire" right now. I figure I'll be spending a great deal of time learning about the things on tests that I pass. I like code and am looking forward to getting into hf so I can send cw.

My children and I are planning a cross country bicycle trip in the summer of 2005 and I am hoping that they'll be at least tech by then. Well, I know I'll have tons of questions for you guys as soon as I figure out what I'm getting for bikes and radios. I am pretty sure that my son and I are going to be riding recumbents but my daughter is not sure yet. I haven't bought mine, since a tandem bent is also being considered. There is a possibility that Kenwood is going to sponsor us. I guess I'd like to know what radios I should consider asking for. The Yaesu FT-817 has been recommended and it really looks like a great radio, but it's a Yaesu. The vice president of Kenwood was at the NAB convention in Las Vegas and he and I had a chat found found that we had a lot in common. I think that he'd help me out with my radio needs, and I can't afford to look a gift horse in the mouth. Any suggestions will be appreciated. Thanks.

Laurianne,
Welcome to the group.
There are bicycle mobile hams all over the world who belong to this group.
I hope you find a good radio, the best antenna, a headset mic/earphone, and best of all, many contacts.
I read your story and appreciate your strength in your many difficulties, but this is the point I wish to emphasize, is that perseverence makes people stronger, not weaker.
I never thought I would be riding a bike, let alone talking on ham radio now, but
I did the Marine Corp Marathon for the first time last year. It is now my favorite event !
Good Luck, take care, and please ask these nice people all the questions you need answers too. This is why this forum is here.

Laurianne,
I agree with Bob, very inspiring story.
And welcome to the world of pedalling and talking. I have been at it since 98 and still enjoy it.
I am a new/old member of the group. I had dropped my old yahoo id and just recently signed back up.
I ride a Lemond wayzata road bike with all my junk in a pack on a bike rack with a plain old mfj 5/8 base loaded nmo mount antenna mounted back on the rear of the rack. It works really well for 2m. I also have a shorter dual band nmo mount antenna that I use some and it also works well.
I just finished up my 4th Tour de Cure here in the central TN area and am looking forward to the ms150 in october, this will be my 3rd one of those. And I tote all the radio stuff with me. I have managed to cut the weight down on it though.
My radio lately is an old standard dual band that doesn't work on uhf except receive only. So I use the 2m side. I butchered it up so I can operate different batt. packs on it if needed and have a premier headset/boom mic and home made ptt switch on the handle bars that works out really nice.
Many of the hams in this area help with the charity rides and I enjoy listening in and talking to them as I ride. And many times I am able to help fellow riders by calling the sags directly.
Thanks for the story, and welcome.

645. HF Net?

Yahoo group: BMHA
Date: 2004-06-27 21:03:34 UTC
From: Luis
Topic: 645 Message: 645

Hey folks....

Even though most of my bike hamming is on the VHF and UHF bands (2m and 70cm), I was wondering if there was an HF net for us biking hams. I mean just about every group out there from Alcoholics to Zionists and everyone else in between has a 20m net... Why not us?

Something to add to our radio fun? Why not?!?!?

Luis KD5KJD

P.S. I'm adding HF hamming to my bike in the near future. Photos before and after will be posted.

Luis,

Being NCS would be a grueling experience. I suppose the NCS could put the net on tape and transcribe it to a log sheet later.

What kind of rig you going install? How much power?

I don't know... NCS could be on a tricycle, stationary. That is, if you wanted to be 100% /BM.

Or, what I've done quite a bit on 6m and 2m. park the bike near a picnic table put your longest cord on.

From: Luis
Topic: 645 Message: 648

Ok Folks...

What I was thinking was of a Sunday afternoon net on 20 meter phone in the General portion of the band. I was thinking maybe a convenient time like 1800 eastern, 1700 central, 1500 pacific, 2300 UTC...

IF there folks who have bike HF all the better, but not required. Transmit from your base station! Use a friend's station, a club station, or some other station, just check in! Even automobile mobile counts!

We'd need a frequency, a couple of folks to volunteer to be net control ops (I volunteer from here in Houston, Texas) and just the membership to check in! I know we're a small group. But why not? We could even make it a monthly event, put it on our calendar and go for it. As we'd grow, we'd consider making it a bi-montly net? <gasp> Even... a weekly net? Dare I dream? LOL

And as for those who wonder what I run at home, in the truck and on my bike, I'll tell you and then I'll ask for my photos to added to the site. Ok?

Shack: ICOM 146PRO with an ICOM 718 (back-up HF rig), ICOM 2720, Heil mikes and/or Heil headsets, Hustler 5BTV and G5RV antennas and various loops for VHF+ SSB.

Truck: ICOM 706MKII-G, Heil mobile mikes and/or headsets, Screwdriver for HF, Loops for 6m SSB, 2m SSB, and 70cm SSB.

Truck: ICOM 2720 FM dualbander, Comet SBB5NMO

EasyRacers Sport recumbent bicycle: ICOM W32A dualbander HT or ICOM T81A quadbander HT, Pryme speaker mike or headset, and Larsen baseloaded dualband antenna.

*** Coming Soon!!! ***
For the bike I plan on an ICOM 703 QRP rig or another 706. It will be powered by a 12v 18ah SLA battery. The antenna will be a portable screwdriver, maybe MFJ's.

I'll be cycling with the YL (on a tandem) down to the Oregon coast from Vancouver/Victoria BC, from roughly August 16th to 30th. I'll be on APRS and monitoring voice on 144.39, CTSS 100 while enroute. I am taking a Tokyo Hypower HT-750 and will be on 50.125 or the SSB QRP frequencies on 15 and 40, but only when stationary for a while. It would be nice to meet some biker hams along the way, at least on the radio. I know there are a couple of BMHA members in Portland, where I will be around the 28th/29th. You should be able to spot me on http://www.findu.com/cgi-bin/find.cgi?kd7igx*

654. BMHA: Some of you are not getting email notifications

Yahoo group: BMHA
Date: 2004-07-30 01:02:15 UTC
From: slafetra
Topic: 654 Message: 654

Team:

Some of you are not receiving email that you signed up for from this discussion list. This happens to people who use "challenge/response" systems to reduce the SPAM they receive.

I'd like to take the time to remind people that challenge/response systems do not work well with mailing lists.

When challenges such as the example below are received, you will not receive a response (both because I won't but more importantly because I can't. Mail from me comes from ME and not the discussion list and is not accepted by the challenge/response system.)

If you do not use a challenge/response service, then you should have no problem.

Example:

ATTENTION!
A message you recently sent to a 0Spam.com user with the subject "Welcome to BMHA" was not delivered because they are using the 0Spam.com anti-spam service. Please click the link below to confirm that this is not spam. When you confirm, this message and all future messages you send will automatically be accepted.

655. New bike, new problems

Yahoo group: BMHA
Date: 2004-07-30 18:21:17 UTC
From: Darren
Topic: 655 Message: 655

I had a new bike for my Birthday.
It's a Land Rover Freelander, yes I know it's also the name of a 4X4 :) Land Rover have decided it's time that they got back to building bike, though these new bikes are built by someone else and badged as Land Rover.

It's a great bike for the money and being aluminium it's a lot lighter than the old bike. This new biks has C700 wheels too which being bigger than the usual 26 inch wheel makes riding much easier.

I have spent the best part of the day trying to fit a rear rack and the antenna to it. This is done now, but it's taken me hours. I still have to run the coax from the antenna mount to the rig mount, and I have to wire up a new box for the head-set and PTT.

I have decided that I only want one cable running from me to the bike as opposed to two. This is causing me problems. I now have to work out how to switch the VX-7R into TX. I'm fairly sure that if I just connect the PTT in parallel with the right connections then this will be OK as the resitive switching circuit in the headset will still do the job... I'm hoping that this is the case. If I get this sorted, it will be much better from the riders point of view, and it will be much neater.
If and when I get it finshed, I'll post a few pics of the installation
I'll spend a good chunk of tomorrow getting the job done. Hopefully it will be done in time for Sunday morning when I have a nice 20 Mile ride planned. That'll be a good test for the bike, not to mention the rider :)

I'll let you know how I get on.

656. Great bike, poor signal

Yahoo group: BMHA
Date: 2004-08-02 22:19:29 UTC
From: Darren
Topic: 656 Message: 656

Well the new bike is now wired up. An almost identical set up to the last bike.

I've just done my normal 10 mile night ride and I was struggling to get heard through my local repeaters. Signals were a good 2 S points down on receive and I often fell out of the repeaters. This meant changing between repeaters quite often. Normally I go on one and stay there.

Could this be due to the new bike being aluminium? I wouldn't have thought so, as aluminium is a better conductor than steel, but it's the only thing that has really changed.
Rig, antenna location, set up etc all alomost identical to the previous bike.

The bike is great, so much better than the old one. It's a shame about the readio performance.
I'll take a few pics and put them in the photo section tomorrow.

Any ideas?

Hello Darren,
One consideration is your antenna.
Are your contact points tight between your coax and the antenna and are they connected properly.
I found that with my road - bike mobile on 2 meters, I must have a ground going from the magnetic mount to the plate on the back rack.
This mount plate is then wired (joined electrically to the frame of the bike by the wheel and screwed into the frame.
I also found that SWR's as well as signal is degraded by the mobile movement of your bike over hilly terrain.
A excellent antenna is one that the solid core is transmitting the electrical energy into RF and is sheilded by a grounding cable from the coax or directly at the piont of contact of the base of the antenna itself to ground, meaning your tires.
As is the case with most installations, the RF energy is bled off of the frame of the bicycle and rarely reaches real ground.
In HF situations, it is difficult at best to have a transmit load of correct capacitance while the bicycle is in motion.
Therefore, operations while a bicycle is stationary and a ground rod is inserted into the ground are preferred.
The size of most antennas for HF propogation for screwdriver type which take a lot of room and are difficult to operate with and ride at the same time.
Some manage to create antennas which are of correct capacity for the load of the transmitted frequency, but have such poor grounding that the create High SWR's
which are not desireable for the transmittter, causing it to either stop propogating or burning out internal transmitter elements, including the final amplifier in most radios.
Marine and aircraft style antennas offer the best hope for the bicycle mobilist,
since they do not require a ground plane.

Hello Darren,
I re-read your previous posting. Just an idea to check out. It sounds to me you are mounting your antenna to the rear rack. Check your mounting connections from the rack to the frame. If you are using the rack as a ground plane for the antenna, you may find the electrical / rf ground between the rack and the frame to be either incomplete or inadequate. Currently, I use a 5/8 wave flexible antenna mounted to the H/T (VX-5R), but plan to go for a J-Pole at the rear of the bike.

Thanks Robert and Harry for your replies.

The antenna is mounted identically to the previous installation, though on an aluminium rack not a steel one.

I'm beginning to think that it's a grounding problem. It looks OK but electrically it might not be sound.

I think that I'm only grounding to the rack and not the whole bike.

It was quite late when I got back last night, and jumping into the shower was more important than having a real good look at the bike.

I have plenty of time today, so I'll take a meter to the bike and check continuity to the frame. I'm also hoping to enlist some help from a friend to check field strengths, this way I can compare antennas. I have two to choose from, both used with almost identical results on the old bike, but it would be interesting to measure the field strengths.

After 5 days of glorious sunshine, it is now pouring with rain :(This might reduce my testing time. The continuity tests can be done indoors but field strength and signal testing must be done outside.

It's a god job the VX-7R is waterproof :)

I plan to do some tests on HF over the weekend, once I have found a way to mount the 817. I no longer have the bag on the front, so it'll have to be a bracket of some sort. My first tests will be done just holding the rig.
For me bicycle mobile means just that, mobile. If I have to stop and put a spike in the ground, or run a wire out then it's not mobile, so it don't count :)

I've worked 40M BM before now, but with the expected poor results. I have had some great results and 20 and 15M though. This was on a cyleway near the sea. Beating a pile up whilst riding along was a great experience :)

Thanks again for your input,
I'll let you know what I find.

Topic: 656 Message: 660

I have found the problem. It's the radio. To be precise, it;'s the SMA coupling on the top of the rig.

I compared the VX-7 witht he FT-817 and the 817 was far better but a number of S points. On TX I was an S6 with a station on the 817 but only s1 and barely readable on the VX-7 using the same antenna/position etc.

The man at Yaesu UK has aked my to check that the problem is the same on the other bands.He says that there is a small possibility that it is not the SMA but another fault. He did stress a SMALL possibility.

I'll do this when I can find someone on 6M and 70CM to do the test with.

A severe lack of 70cm repeaters around here make 70CM a dead band.

Whatever my tests find, it's a radio problem so it has to go back. I'm just glad that we get a 2 year guarantee in the UK :)

Now I HAVE to find a way of getting the 817 on the bike, or I'll be cycling with no-one to talk to :)

663. FT-817 headset, PTT switching etc

Yahoo group: BMHA
Date: 2004-08-25 08:34:51 UTC
From: Darren
Topic: 663 Message: 663

As my VX-7R is at Yaesu UK being fixed, I got to thinking about using my FT-817 on the bike.

I have doen this in the past using the fist mic, but it's not ideal for long or fast runs. It's fine for pottering around the park with the kid or the dog but not for hammering along at speeds approaching 20 MPH :)

On the VX-7 I used a headset with a bar mounted PTT switch. This switch plugs into the headset so it's all nice and easy.

I was wondering do any of you use a headset with bar mounted PTT on an 817 on the bike?

I do have a headset and control box that will do it, but it's my Homebrew Heil headset used for contesting and the leads are a bit long for the bike and the head set is a bit heavy. I suppose that I could use the control box though, but it's a little bulky for bar mounting.

I thought I'd ask before making modifications to it.

Any suggestions?
TIA

665. Touring Cyclist Shop Panniers

Yahoo group: BMHA
Date: 2004-08-25 19:57:35 UTC
From: Robert A. Hess
Topic: 665 Message: 665

Hi All,

I'm an old timer bicyclist from the '70s looking to renew the activity. I rode the Bikecentennial Transamerica Trail in the summer of '76 with a set of Touring Cyclist Shop panniers and handlebar bag, which were on my bike when it was stolen in '79. 8^(

In my search for any reference to them, I came across your group. Does anyone have any idea where I may find these "vintage" items, for old times' sake? New Old Stock, used, in a closet for 20+ years? Feel free to respond to acorn at cruzio dot (you know) com. Thanks in advance!

From: Lauriann Bradford
Topic: 671 Message: 673

Hi Dennis, I have a Kenwood TH-F6A that I built a bracket for and mounted it on the neck of my handbars (I ride a road bike). I mounted an antenna to a plate on top of the pannier rack on the rear of my bike. I have seen others mount antennas on the side of their bikes, but I don't remember how it was done. If you are going to mount it using a plate across your rack, be sure to use a heavy enough gauge of metal. I used too flimsy a sheet the first time and I think it damage something in my antenna by the constant swinging back and forth as I rode. I am going to work on it this weekend, but I don't have my own SWR meter yet and have been waiting for someone to assist me since I am a pretty new ham. So I really can't suggest anything else.

Mounting an HT to A Bike Continued--
A little imagination goes a long way.
I have a 25 watt RAdio Shack 2 meter mobile, and
I rushed to get it installed on the road bike (27") and Laurianne's
problem is the same as
mine, I have yet to get a SWR meter to measure it with.
I also used a mobile mag-mount antenna 19" secured by a drywall palte on
the back bucket, see
pictures on my website.
I found out that as you are going "bicycle mobile" the signal fluxuates
greatly, and unless you are working repeaters, close by, the signal drops
out because of the radiation pattern is so low to the ground, any
buildings or hills will obstruct the signal.
I mounted the radio to my handlebars using the mobile mounting bracket
with wire ties on the bars and that is secured to velcro to prevent
slippage.
If you really had to, electrical tape also does the job, although you
need to use a lot on the handlebars.
Remember that you are mounting the radio to withstand shock and
vibration.
Military surplus stores would also be a place to shop for a HT bag (a
slim width) to carry the radio in, and this can be also cable -tied to
the handlebars.
If your HT has a capability of accepting 12.6 volts or even 13.8
volts,(look in your manual) a plug wired to a fuse (positive wire-10 amp
fuse with holder) and then for a back rack, you can
install a metal or plastic bucket(square) to hold a small 7 ah battery or
use a saddle bag.
If it is metal, use insulation for the battery so it doesn't move around
while mobile.
As with every electrical installation, your power and antenna wires must
be secured to the frame with wire-ties and all connections should be
soldiered or use powerpoles.(plugs)
The batteries are 3X6 inches and weigh about 20 pounds, so be careful.
If it is too heavy for your bike a variation of batteries (alkaline) or
Ni-Cads can also be used, but if your radio transmits 5 watts or more,
you will have to be lean on transmit time.
Hope some of this helps-
73 and all the best.

I wrote an article that I've submitted sent to the newsletter, but it hasn't been published yet. Covers a lot of this ground. Of course, handlebar bags and/or panniers make wonderful places to put either an HT or a mobile. The problem is that there aren't a lot of "good" options for the antenna.

If it is too heavy for your bike a variation of batteries (alkaline) or Ni-Cads can also be used, but if your radio transmits 5 watts or more, you will have to be lean on transmit time.
Hope some of this helps-
73 and all the best.

676. Re: [BMHA] Mount a HT to a bike?

Yahoo group: BMHA
Date: 2004-09-04 00:50:11 UTC
From: Brian Esche
Topic: 671 Message: 676

I've found what I believe to be an excellent solution for mounting an HT to the handlebars. I purchased a Minoura BH-95 water bottle cage holder (see http://www.minoura.jp/acc-e.html) which clamps onto the handlebars quite securely. Instead of a water bottle cage I mounted a small cell phone holder to the bracket (which can be rotated 90 degrees from what is shown in the photo in the above link). If desired the BH-95 can be mounted to other parts of the frame as well. The trick is finding a cell phone holder that holds your particular HT securely and that can also attach to the bracket. I ended up drilling holes through the cell phone holder so that I could run the screws through that piece and then into the bracket of the BH-95. When the HT is mounted in the cell phone holder I wrap a small bungee cord around the HT and the handlebars as one more bit of insurance that the HT will stay in the holder. I've used this method on my off-road bike for several months with great success.

Subject: RE: [BMHA] Mount a HT to a bike?

I wrote an article that I've submitted sent to the newsletter, but it
hasn't been published yet. Covers a lot of this ground. Of course,
handlebar bags and/or panniers make wonderful places to put either an HT
or a mobile. The problem is that there aren't a lot of "good" options
for the antenna.

Subject: Re: [BMHA] Mount a HT to a bike?

Mounting an HT to A Bike Continued--
A little imagination goes a long way.
I have a 25 watt RAdio Shack 2 meter mobile, and
I rushed to get it installed on the road bike (27") and Laurianne's
problem is the same as
mine, I have yet to get a SWR meter to measure it with.
I also used a mobile mag-mount antenna 19" secured by a drywall palte on
the back bucket, see
pictures on my website.
I found out that as you are going "bicycle mobile" the signal fluxuates
greatly, and unless you are working repeaters, close by, the signal
drops

out because of the radiation pattern is so low to the ground, any buildings or hills will obstruct the signal.
I mounted the radio to my handlebars using the mobile mounting bracket with wire ties on the bars and that is secured to velcro to prevent slippage.
If you really had to, electrical tape also does the job, although you need to use a lot on the handlebars.
Remember that you are mounting the radio to withstand shock and vibration.
Military surplus stores would also be a place to shop for a HT bag (a slim width) to carry the radio in, and this can be also cable -tied to the handlebars.
If your HT has a capability of accepting 12.6 volts or even 13.8 volts,(look in your manual) a plug wired to a fuse (positive wire-10 amp fuse with holder) and then for a back rack, you can
install a metal or plastic bucket(square) to hold a small 7 ah battery or
use a saddle bag.
If it is metal, use insulation for the battery so it doesn't move around while mobile.
As with every electrical installation, your power and antenna wires must be secured to the frame with wire-ties and all connections should be soldiered or use powerpoles.(plugs)
The batteries are 3X6 inches and weigh about 20 pounds, so be careful. If it is too heavy for your bike a variation of batteries (alkaline) or Ni-Cads can also be used, but if your radio transmits 5 watts or more, you will have to be lean on transmit time.
Hope some of this helps-
73 and all the best.

> I was wondering do any of you use a headset with bar mounted PTT on an
> 817 on the bike?

After two bike outings now as /bike mobile with the FT-817, I have decided I will need to make a new control box just for biking. I saw recently a web page where someone had the PTT button on the right side handgrip, and the fast-up-down controls on the left. I like the idea, but can't find the page now.

For now, I am using VOX (out of necessity) with much sucess, until a car drives by and sets it off and I can't hear the other guy until I push the "A" button on the rig and kill the VOX.

My headset is a cheap, single earpiece model with a spring steel headband. I streched it over the foam helmet and it actually stays in place without tape.

Jake NOLX,
I have been told not to use Vox by several experienced Hams.
If you start peddling hard and you are catching your breath, this goes out on the air.
Hope you re-consider.A PTT button is fine if you mount it on the handle-bars.
I suggest using a Radio Shack headset, Part # 21-1898, and make a special plug for it to adapt to Transmit .
Remember all, in some states it is still illegal to wear a dual ear headset, because you cannot hear from behind you, cars or other noises(fire trucks and ambulances).
Be smart, wear a single ear headphone.

Haven't been following the thread closely so I may
have missed this. Sorry if this is redundant but I
think Heil makes a headset for the 817 that has
UP/DOWN and PTT that can be handlebar mounted.

I'll second the not using VOX. Not only your breath, but if you're going fast enough, wind noise will trigger it also. And loud vehicles, also.

I was wondering do any of you use a headset with bar mounted PTT on
an 817 on the bike?
==========

Hey Lenny,

w9xs here - formerly k9rma

That Heil Explorer is a good bet for bike mobile. PTT and up/down freq
mounts quite handily on the brake lever.

http://w9xs.us

You guys are going to have to straighten me out. Why the preoccuptation
with QRP? ICOM, Kenwood and others have some rather lightweight radios is
the 100W range. I mean 5.5 lbs isn't a feather weight but, on a bike, it's
hardly noticeable.

With the band condx the way they are, even the HFPack folks have mostly
disappeared.

Just off the top - how many of you BMHA played FD while on the bike?
Anybody got any scores they'd like to crow about?

I'll be out in another hour or so. Will keep an ear for BMHA folks on
18.157.5 and 14.432.5

Hey Darren,
Several of us who are also members of the HFPACK yahoo group have made small headsets for the 817. We use cell phone boom mic / ear sets. Light weight and cheap.

Basic design is here.
http://www.srv.net/~kr8l/headsetmic.htm

Works great at high speeds with some extra mic foam to deal with the wind noise.

I used to use VOX in the car all the time until one day someone nearly took the front of my car off with a stupid bit of driving.
As the window was down I shouted and swore at him and questioned his parentage..... Then I remembered that not only was I using VOX but I was on the local repeater at the time :)

Lesson learned!

Thanks to Jay for the link to the headset design.
I'm a member of HFpack but I have not seen this one before. Thanks.

Darren,
You are welcome for the link.
I have made sevral variations of this design for my bicycle mobile setup.
The fact that the parts are so cheap is a nice plus. A small ptt switch mounted to the handlebars completes the interface for easy ham-while-cycling.

As far as QRP, the issue with me is not the power, but the weight of the battieries to supply the higher level of tx. With the 817 I can carry around a small 12v sla and have plenty of power on my 20 - 100 mile ride. However, with a larger rig, a larger battery is required and that starts to add up quickly when you are pulling it for long distances. Even with the solar panels on the buggy that I tow behind me to recharge the batteries, the power needs for 50 or 100w is signigicantly more than what is required for the 817.

686. HFpack. BMHA invitation.

Yahoo group: BMHA
Date: 2004-09-07 18:13:48 UTC
From: KQ6XA
Topic: 686 Message: 686

Dear BMHA members,
BMHA members and all bicycle mobileers are invited to participate in HFpack activities, especially On-The-Air nets, schedules, and calling frequencies. HFpack gives priority to bicycle mobiles on the air, and the HFpack calling frequencies are a good place to make contact when you are out riding with your HF (SSB or CW). You can find more HF/BikeMobile operators on HFpack than any other place on the bands. Recently, the activity has shifted to 20 meters. For those who are unfamiliar with HFpack, I'm attaching some info about it below.
73---Bonnie KQ6XA

HFpack. The HF Portable Group.
A worldwide network of radio operators interested in HF portable.

HFpack is an international resource for High Frequency communications. HFpack provides an information exchange about transceivers, antennas, systems, packs, propagation, new developments and techniques in HF portable operation.

HFpack on-the-air: daily QSOs, weekend skeds, nets.
HFpack.com Website: a great HF resource.
HFpack Yahoo egroup: 4000+ members, fully moderated.
HFpack hamfests: events and forums.

WEBSITE:
http://www.hfpack.com

HFPACK ON THE AIR
Through calling frequencies and on-the-air schedules, HFpack is active with amateur radio around the world. Although not a "QRP club", HFpack includes low power SSB operators, and gives priority to them on the air. QRO base stations are encouraged to join the fun, so it is not necessary to be operating portable to participate. This provides a unique spot on the bands where weak SSB stations and portables can make contact. Since propagation has recently changed due to the sunspot cycle, the 20 meter HFpack frequency 14342.5kHz is now more active.

Saturday and Sunday HFpack "Net" Schedule UTC
16:30z and 22:30z UTC 18157.5kHz USB (18158 CW)
17:00z and 23:00z UTC 14342.5kHz USB (14343 CW)

Base-Mobile-Portable-Pedestrian-Bicycle-Boat-Aero
All operators are invited to HFpack On-The-Air. HFpack encourages base station operators to participate.

ABOUT HFPACK
HFpack is the result of a new type of group developed on-the-air and over the internet. HFpack's egroup is a spam-free flame-free fully-moderated discussion group, primarily utilized by amateur radio operators who are interested in HF portable communications and equipment. Subscription and "membership" in the HFpack egroup is free. It is currently active using the Yahoo groups server system (but not listed in the Yahoo directory), where messages can be read and posted via the web, direct email, or email daily digest modes. Participants in the HFpack egroup observe friendly cooperation and good netiquette.

ABOUT HFPACK's WEBSITE
The HFpack website has hourly-updated ionosphere-sounding propagation charts, databases for measured transceiver power consumption comparisons, measured pedestrian antenna efficiency comparisons, HFpack Hall of Fame (the amateur radio Pedestrian Mobile and Human Powered Mobile world record QSOs).

Visit the HFpack website for more information.
http://www.hfpack.com

687. Re: Mount a HT to a bike?

Yahoo group: BMHA
Date: 2004-09-11 15:01:55 UTC
From: n1ksn
Topic: 671 Message: 687

I use RAM components to mount radios to my bicycle. I get them from www.GPSCity.com.

For my HT I use the Belt Clip Cradle BC1 and mounting hardware RAM-B-149U which has a diamond plate to connect to the BC1, a u-bolt base to connect to the handlebars. and a 3" arm between them. My Icom IC-T2H Sport fits perfectly on this, and the 1" rubber ball components do a good job of absorbing shocks. If my ride is going to be bumpy, I add a small velco strap around the lower part of the radio.

For my FT-817 I use the West Mountain Radio mount (obtained separately) combined with RAM parts as above, except I use a plate mount instead of the diamond mount to connect to the WMR mount.

Hope this helps.

Best regards,
Andy N1KSN
Menasha, WI

688. Re: FT-817 headset, PTT switching etc

Yahoo group: BMHA
Date: 2004-09-11 15:10:31 UTC
From: n1ksn
Topic: 663 Message: 688

I also use the basic circuit described by others to use a cellphone headset with the FT-817. However, I found it useful to add a 50K trim pot to the output side of the mic line (between the radio and the DC blocking capacitor with the radio MIC connection on the wiper and one side at ground).

This allows me to adjust the gain so that I can better match the headset to the radio. One discount headset I got had so much output that I had to set the SSB MIC gain on the FT-817 to 1. That's a hot mic! Now with the pot in the adapter I can adjust it so that the level from the adapter is the same as the stock mic.

By the way, I just found a really nice cellphone headset on Amazon, sold by Jensen (I think). It is called "behind the neck," but it is really behind the head and costs about $19. With the exception of not having a PTT button in the cord, it looks identical to more expensive commercial headsets sold by Otto Communications. I use the latter on my HTs, including when bicycle mobile.

689. Greetings from a new member

Yahoo group: BMHA
Date: 2004-09-11 15:28:41 UTC
From: n1ksn
Topic: 689 Message: 689

Hi Folks,

I am a new member, Andy N1KSN, and I thought I'd say "Hi." I have been bicycle mobile for a couple of years now. My bike is a Trek Navigator 200 hybrid.

I have operated both VHF and HF on my bike, with an Icom IC-T2H Sport and an FT-817. When VHF I use a "Jurasic Duck" u-bolted to the rear of the bike and RG58 from the antenna to the T2H, which is mounted using RAM components made for GPS units. (I've given the part numbers in another message.) The antenna, whose plans I got via this website, works well and I can get into all the repeaters here in the Fox Valley area of NE Wisconsin. With this radio I use an Otto Communications headset with a PTT button in the cord. It is behind-the-head, so I can wear my helmet easily.

I really like the IC-T2H sport because it draws less current than other HTs on receive and I can use high-capacity rechargeable AAs with it for long operation on one charge. I have a spare battery holder and set of AAs for longer rides, just in case. Also, I seem to get good audio reports on this radio and it appears to be pretty rugged.

I haven't operated HF/Bike Mobile for a year, but when I do I use the FT-817 with a combination of RAM and West Mountain Radio mounting hardware. (I also use some of these components for a station mount on a board.) A 5 or 7 Ah gel cell goes in the handlebar bag, and a Hamstick is mounted with a universal mount on about 4 feet of aluminum tube u-bolted horizontally to the rear luggage rack. I've gotten QSOs around the USA with this setup when the sunspots were good. I've used the Heil Traveller with the FT-817, modified at the factory with additional RF bypass capacitors. However, I think I may switch to a cellphone headset adapter I've built for the FT-817 and have enjoyed using in my home station (if RF isn't a problem).

Anyway, that's my story. I'm not a hardcore rider, but I enjoy the occassional 20 mile trip if I can talk my wife into it. I really like the idea of getting exercise and hamming at the same time.

Best regards,
Andy N1KSN
Menasha, WI

690. HF-biking/ battery life/ HF-vs-VHF/bm poll?

Yahoo group: BMHA
Date: 2004-09-15 13:52:26 UTC
From: Jake
Topic: 690 Message: 690

HF biking update:
Last week I swapped the FT-817:
http://hometown.aol.com/n0lx/bikemobile.html
with my IC-706 and tried some higher power HF-bike mobile. Used the same 13 foot halfwave endfed on 20 meters. I was out three and a half hours and made some great contacts. One guy in Mississippi gave me a 59+10dB running 35 watts. He was +20 to +30, but was running 700 watts.
My QRP matching unit for 1/2 wave antennas would not have held up to the 35-50 watts I was running, so I whipped together a new one with a homebrew air-wound coil that uses hot glue to hold it's shape. Here is the (for now) exposed tuner that rides on the back of the bike rack:
http://www.hometown.aol.com/n0lx/images/hipowertuner.jpg

Battery:
I used a 17 Ah SLA battery with the 706. In 3.5 hours of riding, here is the break-down:
TX=1.3 hrs...RX=2.2 hrs. I varied the power between 35-50 watts. The battery voltage still read 12.22v when I got home. I put it out in the back yard for a couple days plugged into my solar charger and now it's ready for more action.

Poll:
Is anyone besides me curious how many BMHA members are operating HF vs. VHF (or both) on their bikes? It would be an interesting poll to take if the list owner agreed.

73,
Jake

Well, I can answer it here. I only do VHF/UHF with my VX1, and
won't be doing that again until I find a better way to mount it so that
I don't destroy my coax again.

Well, if people want to go back to April of 2002, the BMHA asked this very question on their online survey. Results at http://www.lafetra.com/bmha/Survey/survey-results.asp

Thanks, Skip. Looks like I am in the minority. I am thinking about trying 2 meter APRS along with the HF setup someday.

As for HF nets mentioned in an earlier post, You can't go wrong with the HFpack frequencies. 18.157.5 has been the main freq. usually with many stations looking for bike mobile/ped mobile low power signals. Now the 20 meter HFpack "watering hole" of 14.342.5 is seeing more use as band conditions change. In fact I should be out riding this afternoon by 2300Z with the 706 and 13 foot antenna.

Topic: 695 Message: 695

I went HF bike mobiling last evening (0000-0200Z) with the IC-706 and had a blast. Had a bit of unexplainable high swr at first, then smooth sailing for the two hour ride. In two hours, I made 24 contacts from here in Colorado to ten states and three Canadian Provinces. Oddly, I seem to have contacted the four corners of the US/CA. Quebec to the N/E, Florida to the S/E, California to the S/W, Washington state and British Columbia to the N/W.

One QSO was with Jean, VE2JCW who explained to me that everyone in his village speaks only French and apologized for his poor English (which was just fine). Arnie, N6HC would check in from time to time to let me know I was still putting out a big signal to California. Last QSO was with Paul, ACØZ/p vacationing in a rented cabin on Lopez Island in the San Juan Island group of WA state. We talked for almost 25 minutes as I rode the last few miles back home.

This is my kind of ham radio: it doesn't get much better than this!

Jake,
There are a few of us doing both (all three VHF/APRS+HF) in the group.
I agree with you, the HFPACK freqs are a great place to start with bicycle mobile stations.

Maybe we can work each other Bm to BM soon.

Topic: 697 Message: 697

Link to videos demonstrating what the story below describes. Not just Bicycle locks either.
http://www.bikeforums.net/showthread.php?t=66128&page=1&pp=25

>
> September 17, 2004
>
> The Pen Is Mightier Than the Lock
>
> By LYDIA POLGREEN, The New York Times
>
> The cunning bicycle thieves of New York City always seem to be one step ahead of lockmakers. Design a more sophisticated lock and the thieves make a better pick. Make a sturdier chain and they get bigger bolt cutters. And if all else fails, they just dig up the parking meter or stop sign to unshackle the bike from it. But to open some of the toughest locks on the market, a thief needs only to flick his Bic pen.
>
> Many cyclists erupted in disbelief and anger this week after videos were posted on the Internet showing how a few seconds of work could pick many of the most expensive and common U-shaped locks, including several models made by Kryptonite, the most recognized brand.
>
> Mashing the empty barrel of a ballpoint pen into the cylindrical keyhole and turning it clockwise does the trick that has struck fear into the hearts of bicycle owners, especially those in New York, where thousands of bikes are stolen each year.
>
> "There was murmuring on various Web sites, and so I decided to go home and pick up a pen and see it if works," said Benjamin Running, a graphic designer who lives in downtown Brooklyn. "Sure enough, within 30 seconds I had broken into my $90 lock. I was in awe. My jaw literally dropped to the floor. It was so easy."
>
> And many Internet users had the same reaction this week when they saw the homemade video he posted on his blog of his Kryptonite NY Chain popping open.
>
> The problem could have wider consequences. Lock experts said the fault was with a particular type of cylindrical lock that is used not just in bike locks but in vending machines, cable locks for laptop computers, alarm system panels and countless other places.
>
> Not all such locks are vulnerable, because some are built with more sophistication. Older Kryptonite locks made before 2002 appear to be less

susceptible, according to bike shops that have tried to use the technique on them.
>
> But this type of mechanism is used on most of the bicycle locks that are used by millions of people around the country, not just those made by Kryptonite (although the company said yesterday that a new and better model was on the way).
>
> As the news spread, bicycle shops across the nation pulled the locks off their shelves and cyclists left their bikes at home, wondering if anything could keep their wheels safe.
>
> "You would think for $80 for a bike lock it would be secure," said Marc Weber Tobias, an investigative lawyer and security expert, whose Web site, security.org, has posted warnings about the flaws of cylindrical locks like the ones used in U-locks. "But this doesn't surprise me at all."
>
> The trick works because the pen has the right diameter and is rigid enough to hold its general shape but pliable enough to mold into a sort of key that opens the lock. Mr. Tobias said the vulnerability of such locks was well known in security circles.
>
> "These are cheaply manufactured locks with serious design flaws," he said. "You can't possibly think your bike is safe with one of these locks."
>
> The uproar appears to have started on Sunday, when Chris Brennan, a cyclist in San Francisco, posted an urgent message on the bikeforums.net bulletin board after he was able to pop open his lock with a pen.
>
> Like many people, he had been skeptical, but doubts were quickly dispelled when users like Mr. Running started posting digital video clips of the trick. By yesterday, 125,000 people had downloaded it from, his site, thirdrate.com, he said. Meanwhile, nearly 170,000 had seen Mr. Brennan's posting, starting a full-fledged panic.
>
> "We are especially concerned because we thought these were the best," said Noah Budnick, projects director at Transportation Alternatives, an advocacy group representing bicyclists in New York City. "Our members get a discount on these locks. What is really shocking is the casualness with which someone could steal a bike with one of these locks on it."
>
> Kryptonite, which is based in Canton, Mass., and was bought by Ingersoll-Rand in 2001, is named for the only material that can defeat Superman. The company has been making locks since the 1970's and is recognized by most bicycle shops as the leading lockmaker.
>
> It is so confident in the security of its locks that if a bicycle is stolen by someone who broke the lock, Kryptonite will pay up to $3,500 to replace the bike, depending on the model of lock, though there are several caveats to the policy. Bike shops in New York City overwhelmingly recommend

the company's locks, particularly the four locks that are designed specifically for New York riders.
>
> In a statement sent by e-mail yesterday, the company said that it was aware of the problem and was moving quickly to get locks featuring a different mechanism to bike shops and that it was designing a program to let users of compromised locks to upgrade to new ones.
>
> Donna M. Tocci, a spokeswoman for the company, stressed that locks made by other manufacturers shared the same vulnerabilities.
>
> Cyclists across the city marveled at how easy it was to crack their locks. With a little practice, opening a Kryptonite with a Bic barrel takes as little time as using a key, said Arone Dyer, a mechanic at Bicycle Habitat in SoHo. She produced the white plastic barrel of a Bic pen from her pocket along with a Kryptonite brand lock and provided a demonstration. In less than five seconds, the shackle popped and slid open.
>
> "It is that easy," Ms. Dyer said.
>
> The NY Chain lock, the product most shops recommend for city cyclists, consists of a heavy chain and small U-shaped lock. It weighs about six pounds, so heavy that many riders wear it slung around their waists. The chain is made of squared links of hardened steel that is impossible to cut by hand, so that part of the lock is still sound.
>
> Bike shops are recommending that customers replace the small U-lock with a sturdy padlock, like the ones that bodegas use to secure their roll-down gates. These padlocks cost less than $20 at most hardware stores.
>
> In addition, Kryptonite has a line of locks that feature flat keys; Transportation Alternatives recommended that its members buy one of those.
>
> The group's Mr. Budnick said that most bike thefts could be prevented if only office buildings allowed people to bring their bicycles indoors, but few do. A bill requiring buildings to allow bikes inside was introduced by City Councilman David Yassky but has been stuck in the Housing and Buildings Committee.
>
> Will Wood, whose Spokes and Strings shop in Williamsburg caters to the commuter market, said he was warning anyone who would listen.
>
> "I feel like a Cassandra, but for years I have said to my customers, 'This is the industry standard, and this will keep your bike safe,' " Mr. Wood said. "Now I tell everyone who comes in, 'Tell your friends before the thieves tell theirs.' ''

699. I came a cropper

Yahoo group: BMHA
Date: 2004-09-23 07:21:11 UTC
From: Darren
Topic: 699 Message: 699

Saturday morning, during my regular 12 mile ride along a local cycle trail, as I was cycling around two joggers, I hit a slippery patch. The bike went one way and I went the other :)
Ouch! it was the first time that I have fallen off my bicycle for nearly 20 years. Luckilly I wasn't doing any speed. less than 10 MPH as I had waited to clear from under a bridge before passing the joggers

Apart from two very nice purple bruises and one twisted knee all is OK. My pride was dented more than anything else was. The ride home was painful, but better a half hour painful ride than a 2 hour painful walk :)

This little accident confirmed two things.

The first, always try and fit a "break-away" connection to the radio. Mine worked perfectly, seperating me from the radio instantly.

The second, never use a large antenna. If I had had anything bigger than I was using (2/70 dual bander 3 feet 4 inches long) it could have been a lot worse. A large antennas (like some HF antennas I've seen pics of on bikes) could have caused all sorts of problems.
It could have hit the joggers, it could have hit me, it could have stopped me clearing the bike as I came off... I've been thinking about this and I've decided to NEVER use monster antennas on the bike. I'll stick with my driveabout for HF.

This incident has also made me think.
Do I want to install the external battery now? I use one occasionally, but I wonder how it would have handled in the fall, and what if the speed was higher?

Do I fix the VX7 so it can't come adrift?
At the moment it sits in a slightly modified mic holder. It hold the rig in place and alows for east fitting and removal.
During the fall the rig came loose, but was still connected to the coax. Looking at the few witness marks on the bike. I figure that if the VX-7 hadn't come loose it would have been damaged. It's carrying case saved it from getting scratched as it slid along the ground :)
Which is better, a solid fixed radio, or one that can "get out of the way" in an accident?

I'm fine, still a bit sore at times, but I'm still able to cycle. The hills hurt my knee a little more but it's getting better every day :)

704. Hello from a new Ham Operator

Yahoo group: BMHA
Date: 2004-09-24 18:42:21 UTC
From: rick_funderburg
Topic: 704 Message: 704

I really enjoy bicycling. I use a bike to commute every day, as well as run errands, go camping, and go on longish rides (I did a 125 mile hilly ride a couple of weeks ago).

I also recently became interested in ham radio. I just took the Technician test last weekend, and I am expecting to receive my callsign any day now.

I am looking forward to getting lots of information about how to blend these two hobbies. I currently don't have a radio, but I am planning on getting a 2m HT soon.

Is there a FAQ for the group? I know I have several questions like, what is a good way to avoid wind noise (I usually am tooling around 30-35kph)? Lists of recommended hardware might be helpful too.

If no FAQ exists, I would be happy to create one with questions that I have answered.

Anyway, I'm glad to be a part of this list, and if any of you are around Madison, WI give me a shout and we can go for a bike ride.

Topic: 704 Message: 706

Hi Rick,
Nice to meet you and congrats on the ticket.
The 2 hobbies are great together, I really enjoy it being able to do both. Also, our local hams work communications on many of the local charity rides and it is really cool to be able to be in touch with them as I ride along. It has also come in handy more than once to be able to call for first aid or sag support. Other riders think its kinda funny until I get on there and a few minutes later the sag wagon shows up to fix their bike. hehe
As far as wind noise, I use a small headset with a boom mic and really haven't had a huge problem with noise. Sort of depends on how you turn your head when talking.
Look forward to hearing how your ham/bike experiences go.

Topic: 704 Message: 707

Hi Lauriann,

I have been in and out of Austin, NV this summer and on each trip have seen organized bicycle tours along the road. Often it has been over a dozen riders accompanied by a couple of vans. Those desert hills don't look like a lot of fun in hundred degree summer days!

I also saw one pair of guys by themselves. Hwy 50 seems like a popular route for long distance riders.

No one had any visible antennas on their bikes though.

Subject: [BMHA] Hello from a new Ham Operator

I really enjoy bicycling. I use a bike to commute every day, as well as run errands, go camping, and go on longish rides (I did a 125 mile hilly ride a couple of weeks ago).

I also recently became interested in ham radio. I just took the Technician test last weekend, and I am expecting to receive my callsign any day now.

I am looking forward to getting lots of information about how to blend these two hobbies. I currently don't have a radio, but I am planning on getting a 2m HT soon.

Is there a FAQ for the group? I know I have several questions like, what is a good way to avoid wind noise (I usually am tooling around 30-35kph)? Lists of recommended hardware might be helpful too.

If no FAQ exists, I would be happy to create one with questions that I have answered.

Anyway, I'm glad to be a part of this list, and if any of you are around Madison, WI give me a shout and we can go for a bike ride.

Rick, Welcome to the hobby and the great world of Bicycle mobiling :)

I use a headset with a foam covered microphone.

I get nothing but good reports from the stations I work.
My average speed is 15 MPH and I'm often out in the wind.

A lot of people have told me that If I hadn't told them that I was on
a bicycle they would not have known.... Except for the panting :)

Unless I'm heading into a strong wind then no one seems to notice wind
noise.

Enjoy the hoby and ride safe.

My average speed is approximately 17 MPH. I am a slow cyclist in comparison to many local racers and recreational cyclists. However, I do get the bike up to much faster speeds. I often ride in groups with some limited casual conversation. I spend much of concentration on keeping the bike upright and watching the road.

I've been following this list and the group for awhile. However, I don't have much opportunity to do radio chat while biking. The two just don't work out much for me. I'm wondering how many hams out here that actually ride a road bike in Eastern Mass.

Charlie, the original poster said 30-35 Kph not Mph :)

18-22 Mph which is still quite fsat but not unreasonable on a good road bike in good weather.

I regularly hit 20+ MPH and talk on the radio at the same time. I don't do it for long though, as talking and riding takes more oxygen than my lungs can deliver :)

I don't have a good road bike, just an average hybrid. I spend most of my time on trails so I've stuck with a hybrid.

On the local charity rides here in central Tennessee (hills) 30mph is not that hard to do. Especially when each leg of the ride is 75 miles, plenty of downhills in that distance. At 45 yrs old, I impress myself everytime I am able to get on the bike lol

I've taken the handheld a few times with me.
I wish that I had a rack to at least put it there. However
most racing bikes such as mine do not have the eyelets!

Besides, he said Kph. About 18mph. About my average range for a century ride, so certainly comfortable for a daily ride. On my thrice weekly bicycle commute I average about 22 mph actual pedalling speed. But that's stop and go, and only 7 km each way, about 2 at a time, so you can't really judge by that.

Bill, My VX-7R sits in a converted mic bracket (fork type) that is cable tied (zip tied) to the handlebar stem. The VX-7R has a button on the back as found on most microphones. I just bent the forks slightly to make it a slightly tighter fit to stop the rig flying off with every bump I hit :)

I have seen a handy mounted using it's belt clip though, again using cable ties. The owner had 3 cable ties, two of them were holding the third. The third was slightly loose to allow the belt clip to fit through the gap. How loose, or big this gap would depend on the rig's clip.

Racks on racing bikes can be a problem I've heard. Usually on the more serious bike though. It's trying to find a happy compromise between racing bike and tourer. Most tourers have the eyelets for racks, panniers etc.

Can you fit one of these new Saddle post racks? I'm not a huge fan as the two I've used in the past used to move about slightly. They are designed for bikes with rear suspension, not that I've ever owned a bike with suspension of any kind :)

My rack is only used to mount the antenna. That's the only reason I put it on. I have carried stuff on it, but that is a happy by product. It's an antenna mount first and a thing to carry stuff on second :)

718. Radio Shack Throat Microphone/earbud

Yahoo group: BMHA
Date: 2004-09-27 19:25:56 UTC
From: Guy Hornbeck
Topic: 718 Message: 718

Greetings all:

In thumbing through prior postings I notices that someone mentioned that R/S has a throat mic/ear-bud product for sale for use with VHF/UHF rigs of the R/S, ICOM, Kenwood pursuation. I contacted R/S and learned that these little gems are now discontinued items and, where available, are marked down to under $10.00 USD.

One neat feature it a remote PTT switch that is designed to be attached to either a bike or motorcycle handlebar via a supplied velcro-style belt.

IMHO, this is one of the best-kept secret around for /BM. Since the mic operates off vibrations from the user's throat it is not subject to typical wind noice associated with convention microphones. Your mileage may vary. Now to recover from my broken leg and get back on the bike part of bicycle moble.

Cheers!

I haven't tried the AES earbud, but have an earlier one branded "eartalk". It is my main bike-mobile microphone/speaker.

Works quite well, but it is susceptible to wind noise.

I haven't tried it yet, but some guy in Asia has been selling them on eBay for about $40, and shipping takes less than a week. Looks good but I got the plug to fit a Yaesu HT and now need to come up with a female jack so I can wire it up to the 817. Sure would be slick.

Do you have a part number or other unique search term to find this? I looked around their website and could not find it.

Given how clueless the reps usually are, I would like to get some more info before trying to track one down.

Throat mic were popular in the open cockpit aircraft,
and they may still be popular with the crop dusters. I
bet you can still buy them. But would the operate
with 12 vdc or 28 vdc?

If you had to build one I would imagine one could use
a R/S microphone and put a preamp behind it. It
should work.

I have not had any experience with this particular throat microphone system, but many years ago, when you could still buy real military surplus electronics equipment from the surplus stores (World War II and Korea), I had an aviator throat microphone. Although it worked quite well with no ambient sounds getting into it, my throat became very sore, like a harsh sore throat! I would hope one could give it a try before settling down with it. By the way, it had a deficiency by today's standards -- carbon granules elements.

It will NOT be on the website. RS removes any item that has been discontinued from the website, and this has been discontinued for quite some time. I picked one up months ago .. just to have .. but never used it.

727. R/S Throat Mic - Discontinued Product

Yahoo group: BMHA
Date: 2004-10-12 15:06:21 UTC
From: Guy Hornbeck
Topic: 727 Message: 727

I believe the R/S product number is 21-1835. R/S usually stocks their products by product number, so browse in the 21.XXXX area and you might get lucky. Most R/S clerks seem clueless as to their merchandise, so guide yourself.

This is a discontinued product, so availability at your local R/S will be hit-and-miss. The R/S stores in the San Francisco Bay Area can usually type in the product number and see if (1) they have it in stock and (2) if they don't, which other stores in the region do have it in stock. I believe that this product is selling for $14.88 (marked down from the original $49.95). The unit seems to work well with R/S and ICOM HT's that use a two-plug speaker mic configuration.

Good luck and 73.

Guy Hornbeck

"Once Upon a Bicycle" again- this year, I have volunteered for the
MCM, on Oct 31st,
and I am bringing a digital camera along this year.
In addition, last years' deployment was so successful on 2 meters,
that the coordinator for this year is giving the bicycle mobiles
their own net on 440!
I will see if I can do this right, and get the correct sized pictures
on the site. In addition, I am changing from a full-sized mobile rig
at 25 watts to a VX-5r at 5 watts.
I will still try to auxillary power it with a 7ah gell-cell,
and connect it to an external mounted dual band antenna.
The rescue-squad guys are also on bikes, so I wanted to take as many
pictures of mobile bikes/set-ups/antennas.
That will give some an idea of how to change/mount/configure your
own bike for adventure...
I have yet to find a microwave dish for 1.2 Ghz mounted on a rack,
but I am still
looking.

Bob,
May I suggest the next step up in HT.
The VX7r is completely submersible. I am running one on my Giant OCR Touring and am quite pleased.
Combined with the submersible speaker mike and tax at Associated Radio the price is less than $410
and the unit has survived two raging down pours with out even having to turn it off.
Just a thought.

I agree with Ted. I use a VX-7R bicycle mobile and it's survived the worst of our Welsh rain. I keep it in it's case for added protection. The case helps keep the mud, muck and road spray messing up the buttons.

I use mine with a watson Dual band antenna on a home brew mount on the rack. I usually run with the rig's own battery but occasionally, on longer rides, I connect up my 7Ah SLA battery.

I also ride with a headset with a bar mounted PTT for safety,

I've put hundreds of miles on the the clock with this set up and it works a treat. I put out as good a signal as people in cars do.

The dual receive function is also a boon. You could monitor 2 frequencies at the same time.

Hi Darren,
I would be really interested to know more about the Headset and handlebar PTT as well as the SLA battery configuration your using and antenna config.
The SLA and Headset are additions I am looking to add shortly. I have purchased a Larson NMO 2/70 B and Maxrad mount and plan to use this and some scrap Alum. or Stainless
to fabricate the antenna system. I have also purchased an sma to bnc adapter for the top of the HT and am now running a old BNC based HT Antenna on the adapter.
The result of which will make attaching and detaching the antenna connection a quick twist instead of dealing with the time and wear intensive SMA connection.
I am running a rear rack and bag and hope to move the baseloaded antenna and mount structure off to the back or side of the bag a few inches to decrease interference.
Any suggestions or opinions based on your experiences would be most appreciated.
Ted

Hello Ted. The headset is the Alan MA-35 bought from Maplin electronics here in the UK. it's a single ear headset with a boom mic with foam windshield.
This headset has a control box on the down lead with a PTT button on it. This control box also has a socket for an external PTT switch.

The PTT on the bar is a small box with a toggle switch fitted. This box is fitted to the bar by very small cable ties. It's in easy thumb reach when riding.

A wire runs from the PTT to the control box in the down lead.

The headset comes with two plugs. They just happen to be wired to suite Yaesu handhelds, though you will need the CT-92 (I think) adapter to screw into the VX7 or the equivalent for the VX5.

The battery is held on the rear of the bike just forward of the rear rack. This is a both job butit works. I have a bracket on the seat post to attach my son's trailer bike and the battery squeezes under this bracket to be a firm but not too tight a fit. It hasn't worked loose yet and it hasn't cracked so it must be just about right :)
More by lick than judgement I will add :)

A cable runs from the battery and is terminated by a Cigar socket.
This is cabletied to the cross bar. The VX-7's power lead plugs into this.

May I suggest that you don't use an SMA to BNC adatper?
I used one of these and it damageged my VX-7. The extra weight and leverage it gives damaged the connection inside the radio causing a return to Yaesu UK for repairs.
Now I use a short Patch lead. SMA on one end and a BNC male on the the other. This removes any strain on the SMA connector.

I have some pictures on the HD somewhere. I'll dig them out and post them in the photo section when I get the chance.

> Ted

Ted, I have had no problems at all with either the mic or the battery.
I don't run with the battery very often as I don't need it. The
battery on the VX-7 lasts for ages even with a good waffle station
like me :)

The headset often gets very wet indeed. It rains a lot here in Wales :(
I have been so wet that I had to remove my wet clothing standing in
the bath. The radio and headset worked every inch of the journey!
Which is more than my waterproof watch did :)

With the VX-7 I ALWAYS have the carry case on. This stops the worst of
our weather and it keeps road grime, mud etc off the keys. I also make
sure that if it's going to be a wet ride that all the rubber bungs are
pushed firmly home first.

The little foam wind guard does a great job. I have had comments that
if I hadn't said that I was on a bicycle, the other station would have
been able to tell.... Apart from the puffing and panting that is :)

737. Introduction from new member

Yahoo group: BMHA
Date: 2004-10-24 01:01:58 UTC
From: mmlife2001
Topic: 737 Message: 737

Hello all

My name is Michael Lynch, I live in Sydney, Australia, My partner, Tani, and I conduct bicycle tours of South East Asia. We are heading over to Northwest Vietnam in November with our next group and this year we are trialling UHF handheld radios for communication in addition to mobile phones. I have no experience with using UHF and very little technical expertise but I'm sure I am about to learn a lot!

Tani and I 'bookend' our tour group with one of us moving from the front of the pack back to the middle and the other from the back up to the middle. Our group can often be spread out 5-10 Kms and it is important for Tani and I to stay in touch as we travel through mountainous countryside.

I have just bought two Uniden UH075 5W HT with VOX headsets http://www.uniden.com.au/v3/FRAME_PROD.HTM . I purchased these because of their waterproof & compact design, their high power and VOX capabilities. However I want to maximise their range and it appears that the antenna is the most important piece of hardware I could upgrade and the higher it is mounted above ground level the better. I do not want to attract too much attention as we will also be conducting a reconnaisance tour through Cambodia by ourselves and if possible would like both antennae to appear to be a safety/flag pole. We have rear racks on our bikes and handlebar bags where I'm planning to store the handset.

I would appreciate any input at all into mounting this system and purchasing an appropriate antenna. I would also be interested in hearing of experiences in the operation of a UHF system in mountainous terrain and what I could reasonably expect in terms of performance. Thank you for any help you can offer.

Regards

Michael Lynch

Michael,

The URL in your posting stated there were repeaters in
Australia for your radio. You need to hone your
skills in using these repeaters. But the big question
is: will they be availabe in the area of your tour?

The UHF signals are line of site, so it may not be
reliable in the mountains you mentioned.

Be certain these radios are legal in the countries in
which you will visit. Even hams must have permission
to operate outside their home country.

Let us know how it goes.

Scott, N7NET

To Michael and Scott,
The UHF CB type radios he mentions are legal in the Aust. and UK for non-licensed people and output 5 watts max.
They are similar to FRS radios here in the US.
I don't know what restrictions if any radio operators in Vietnam are under.
Perhaps he could research that and find out.

Hi Scott

There are UHF repeaters at Son La, used for a flood warning system but I have no idea if I can access them. Our Vietnamese tour partners,the largest tour company in Vietnam and owned by a state corporation, have said there is no problem using UHF in Vietnam. I have contacted the consulate here in Sydney but received no reply and I note that other cycle tour companies use UHF in Thailand and Cambodia. I am still of course actively trying to get information which can be quite hard in a country that seems to have fluid rules and regulations.

EVERYONE: Please go back and re-read message #654 on this board.

Challenge/response techniques for anti-spam filtering DO NOT WORK in public forums such as these. If you use them, you may become disconnected from the forum (see the message from Michael above for a good reason why this will happen).

The gist of message #654 is repeated below:

=== start quote ===
Some of you are not receiving email that you signed up for from this discussion list. This happens to people who
use "challenge/response" systems to reduce the SPAM they receive.

I'd like to take the time to remind people that challenge/response systems do not work well with mailing lists.

When challenges such as the example below are received, you will not receive a response (both because I won't but more importantly because I can't. Mail from me comes from ME and not the discussion list and is not accepted by the challenge/response system.)

If you do not use a challenge/response service, then you should have no problem.
=== end quote ===

Hi Michael,

That's great you know that some transmission rules do
exist.

Using a GPS you might be able to get a fix on the
repeaters. If that worked out you could determine
where to point a two or three element yagi. A yagi in
the UHF range would be bicycle friendly.

It sounds like fun. Keep us updated.

Scott

> They are similar to FRS radios here in the US.

The Euro/UK version of FRS is called PMR 446. It has very strict
compliance regulautions.
Only the built in fixed antenna can be used and the output power is
very low, I'm not sure what it is but it's 500mW or less.
They are great lttle rigs though. I use them all the time when out
with family and friends.
Very handy when out cycling with my non ham wife and son.

A 5 watt UHF service would be ideal but might get too popular :)

There is also a Short Range Radio service, which is higher power but
it licenced. This licence is quite expensive but cover a number of radios.
I have never used this, but it sounds very interesting.

Hi

Thanks to everyone who responded online and off so positively and with heaps of good advice. I will certainly keep everyone informed of how the trip goes. We leave on November 10th for Northern Thailand, then travel to Hanoi to meet our clients and head up to Sapa on the Chinese border. We then take ourselves through Cambodia stopping at Angkor Watt, Phnom Penh & Bokur Hill Station before finally travelling to Ko Chang Island in Thailand and back to Bangkok on December 14th.

I am still interested in the practicalites of attaching an antenna to a bike as well as any other links/pictures to sites detailing these sort of things. I have been directed to a link with a 'Jurassic Duck'which looks very much like what I'll build/buy.Thanks again.

Regards

Michael

Not very good advice to ask "EVERYONE: Please go back and re-read message
#654 on this board."

Not everyone reads these messages on the Yahoo webpage. There are some of us
who read them via eMail. There are even some of us who CANNOT read them on
the webpage. It is obvious that the person sending the verification message
is not reading the messages on the web page. At least you summarized the
message for everyone.

There are certainly many people who will build Elecraft rigs for you; there is a list of them on the Elecraft web site (www.elecraft.com). Some of them will build rigs for disabled and older hams for free.

I haven't seen any online lists of builders for other brands such as Small Wonder Labs, but I'm certain that a post on QRP-L would turn up some willing builders. Or you could buy one that's already built; they come up for sale on QRP-L regularly.

If you're willing to try building anyway, you could check out the Optivisor, a magnifier that you wear like a hat. It's quite effective for seeing those small parts.

From someone who might do it one year,

Something mounted as far back or forward on your back or front rack,
Problems - gets in the road of swinging the leg over on the back, or
always in the vision in the front.

If it is a largish whip aerial, then it might wobble the bike under
certain circumstances, mass/length considerations.

Since I ride with a bob all the time, I'll probably mount it beside the
back wheel.

Topic: 745 Message: 750

Hi Terry

I will be using a Bob through Cambodia but thought that mounting it on a rear rack might give me better performance becasue of the extra height.

In the end rather than build my own with limited knowledge, I have just
bought a 'Mobile One' D-4007 1200mm long 6db 477 MHz Antenna. It is a multiple stacked co-linear UHF antenna with a SWR of less than 1.5 to 1 (pretty much Greek to me) but came recommended by the assistant at Dick Smith Electronics (Sydney). Does this sound like a good purchase or not? Thanks

Michael

ps. It says it works best on a ground plane area of 1 square metre?? Does my bike and rack comply?

753. Waterproof coaxial connectors

Yahoo group: BMHA
Date: 2004-10-31 09:20:42 UTC
From: mmlife2001
Topic: 753 Message: 753

Hi

My brother said that the cheap and nasty coax connectors I had purchased were not good enough for cycle touring and suggested weatherproofed/waterproof connectors and the best cable I could buy, with the shortest run. Does anyone have any specifics for UHF use? Thanks

Michael

I think your brother is being a bit too purist for the distance involved and the other effects on the impedance but be that as it may, if you are only talking about VHF/UHF then Belden 9258 (RG-8X) and either solder N-connectors or the RF-Industries crimp type (you must buy their crimp tool to achieve a proper cold-weld) are what you want. As far as shortest run, we are talking about a bike. It is not going to be longer than 4 feet (1.3 meters) so it is insignificant. RG-8X is about the size of brake and gear cables so it runs nicely next to the cables and tided down with black zip ties (not too tight). At UHF if the bike is metal it will work fine as a ground plane for high gain UHF stacked element antennas (i.e. comet, diamond and similar manufacturers). If VHF I prefer to use a modified marine antenna or any other non-ground dependent half-wave or collinear design.

Go to the Files section of the BMHA yahoogroup and look at my bike installation (N0HZ) and the several other well done installations by others pictured there.

BTW, with HF the rules change. In that case you DO NOT want N-connectors (perfect 50 ohm impedance). You DO want high quality PL259/SO239 combinations. This has to do with the changing impedance nature of H.F. at the antenna point especially if you are using a tuner.

If you can't get Belden, I bought some RG-8X from Radio Shack (Tandy Electronics) the other day for a different application and it seems they have significantly improved that product.

Good Luck,

S. Earl Jarosh
N0HZ (ex. KA0VYB) No Hertz, No Gain

755. Hams on Parade

Yahoo group: BMHA
Date: 2004-11-22 22:45:39 UTC
From: Luis
Topic: 755 Message: 755

Hello fellow bicycle ridin' hams!

I'm here to invite you to watch the Washington Mutual Thanksgiving Day Parade from Houston, Texas. Our recumbent bicycle group has a couple of hams in it and we'd like for you to look for us in this year's Parade. We should be entry 51, I think. Look for at least 3 bikes with antennas on them. I should be on the air on 14.267 (+/- 3kHz for QRM/N)from 1300 UTC until the end of the parade.

IF all goes well, my Easy Racers Sport will be sporting an Icom 706 MkII-G, a HamStick Dipole in a V configuration, plus an Icom W32A for local repeater comms. We're hoping to have an EchoLink hook up as well... and lastly, one of the guys should have APRS working a Tiny Tracker!

The Parade will be televised in Dallas, San Antonio, Austin and a few other towns in Texas. It is also being televised in other markets like Phoenix, and Albuquerque among others.

Hope you see us! Hope to work you as well!

Until then... 73!

Luis KD5KJD

Hello!

I've been using clipless since they came out. Just much safer for me - not breaking a leg or ankle.

The longest ride I've taken has been a week @ about 400mi.

I like the Look or the Shimano as they have a huge platform and you can get something in anyone's price range.

Hope this helps.

Best,

Bill

Hi Jeff,

I think that if you're used to clipless pedals, then you won't want to use anything else. Clipless pedals, actually, make even more sense for long rides, which is what you were asking about.

Jeffrey,
Clipless are definitely the way to go, no matter how long of a ride. Primarily, because you have the ability to utilize more of your pedal stroke, more efficiently than with any other style of pedal. I worked as a bike mechanic for the last ten years. Email me privately and we can discuss it further. I think this is an interesting discussion, and I'd like to continue it, but I'm not sure if this group is the best place to discuss it, simply because the focus lies more on ham-radio related activities. (Hope I'm being tactful about this.) ;o)

Hi Jeffrey. Be careful asking which *anything* is best (like asking which Ham radio is best!) Everyone has the opinion that theirs is better than everyone else's! :-)

I used to do some road riding, and have done the Bicycle Ride Across Georgia (BRAG) several times. For any distance riding, I highly recommend some type of clip or pedal attachment - it will greatly improve your pedaling efficiency.

At the time, I was in college, and had a decent touring bike with toe straps (a nylon strap to hold your foot on the pedal). The advantage was that you didn't need to buy expensive "bike shoes" (and you could walk around off the bike without having a huge attachment under your shoe). These days, about the only place you'll see this type of clip is on mountain bikes (since they allow easy entry and exit for the shoe).

I'd highly recommend that you visit your local bike shop and see what they offer. See what they recommend for your type of riding. Try them out and see for yourself what works for you.

Hi Jeffrey,
Welcome to the group and bicycle hamming, you will love it.
I also use clipless for some time now. They make a huge difference. I use shimano spd style that came on my lemond. Something else that was on it when I got it was a platform attachment clipped into one side of the pedal. I liked that so much that I left it on. I am not a big fan of the take off in large rides, especially with all those wires hanging off of me and a 5/8 2m whip on the back. I would hate to get knocked over with all that stuff. So, when the ride takes off, I use the platform side and then clip in after I get rolling and clear of other riders. Its pretty neat.
Again, welcome; and if I can be of any assistance, let me know.

Thanks for the reply - yes, I've made a few visits to my local shops,
but I wanted input from Hams who were riding bikes and may have
used a clipless system. I've had a very positive reply from many
members.

I truly appreciate the input many members have sent to me regarding clipless/pedals. I hope to incorporate what I have learned from all of you and just go out and try a pedal system. Then, all I need is to coordinate my handheld into the picture.

A lot of people swear by Speedplays; the bearings need to be overhauled every year, so they're high maintenance as far as pedals go, but they're technically good pedals and I don't think you could go wrong. I personally use Ultegra SPD-SL pedals on my road bike.

I ride a bike with ham radio in Brooklyn, NY too. I found that it's best to keep it simple. I use a handlebar bag on my Mountain bike to hold a Yaesu FT-817 and run a Outbacker Joey on my luggage rack (MFJ mount). Problem is that the roads here are so rough, they managed to separate the PL-259 connector on the Joey. I suppose I'll fix it and try a hamstick instead.

Hi Jeffrey,

I find that the 'rattrap' pedals with toe clips and straps are
invaluable on my road bike. I use clips on my mountain bike too.
It took a bit of getting used to, but after awhile you don't notice it.
I've had very little trouble with them even in the NYC traffic.

BMHA will be hosting a forum at the Dayton Hamvention again this year. It will be the morning of Sunday May 22nd. As the forum moderator, I am looking for one or two persons who would like to present or show at the forum. If you would like to be a presentor, please contact me at nf0n@... to discuss. We would like it to be bicycle Ham related but anything close to that would be considered. It could be an actual bicycle presentation or a power-point presentation, slide show or just a stand up talk or presentation.

It is best to keep it as simple as possible.

If it weren't for solid state bike mobile radio would
not even be possible. Not only would the tubes not
stand the grind without shock mounting, but the
necessary power supplies and batteries would make it
impossible.

My wife guessed you were probably from one of three places, Bay Ridge, Park Slope, or Brooklyn Heights.

She grew up on Brooklyn Ave and lived in Park Slope for awhile.

We'll have to get together for a ride when we're there the next time.

I often stop in at Conrads in Tudor City. The last time I was there I picked up a map that shows routes in and around Manhattan.

Best,

Bill

779. GOBA Ham Radio

Yahoo group: BMHA
Date: 2005-01-23 16:22:06 UTC
From: Bill Sharp
Topic: 779 Message: 779

Something like this has been posted on the BMHA home page:

GOBA Announcement

You may already know the Great Ohio Bicycle Adventure is the largest family oriented week long bicycle tour in the U.S. But did you know that this year will be its 17th year?

http://www.goba.com/

Because of our size and needs we?re pretty sure that nowhere are more bicycle mobile hams operating at any one time, anywhere in the country than during GOBA. There's so many of us, GOBA usually gets us all together one night so we can have an eyeball. And thinking of food, GOBA is literally like a week long church social, there are so many opportunities to eat home made food and desserts

In the GOBA amateur radio community being reactive to emergencies is our only focus. Because of that we are able to maintain a near 5 minute response time due in large part to the quality of our bicycle mobile operation.

The volunteer bicycle mobile hams are the front line communication link between the riders and help. The more bicycle operators we have, the shorter that delay between injury and aid. So, we?re continually looking for ways to reduce that time period between when a rider gives a thumbs down to a bicycle mobile and asks for help and when one of the tour?s three squads arrives. For this group of uniquely suitable hams the mission for seven days every year between Father's Day and Field Day in June is to get medical help to an injured rider as quickly as possible.

As you may recall me mentioning before, Hartley Alley (founder of BMHA as well as the originator of the Hilly Hundred in IN) was instrumental in getting bicycle mobiles up and running 17 on GOBA years ago. That's how he and I got to know each other. We saw bicycle mobile ham radio on GOBA as an elite group, those who could be depended on, could be counted on in an emergency to do the best thing/the right thing because they'd done it before.

In fact, Hartley edited my article on bicycle mobile emergency communications that was in CQ-VHF.

We thought this corps could then teach others, because of the unique operating situation during which only hams who ride bicycles qualify.

But enough of the background.

I wanted to get the word out to as many bicycle mobile hams as possible to just let them know about GOBA and the role they would play should they decide to see if they have what it takes to run all out as a bicycle mobile ham for a week, literally 24 ? 7 under emergency conditions.

We view it as the ultimate emergency preparedness test. These are the hams who get the real experience. In a national emergency these are the operators who would be looked to as they have the experience of handling the communications for a transient town of 3,000 that moves 50 or so miles a day.

We only get a chance to have this kind of experience and training once a year.

More information at

http://www.gobahams.org/

Thanks,

Bill

Yahoo group: BMHA
Date: 2005-01-26 00:32:40 UTC
From: Bill Sharp
Topic: 779 Message: 783

Charlie,

Thanks for asking that question. I should have been more clear.

GOBA has been the largest testing ground for bicycle mobile emergency operation for over 15 years. Those who are interested in learning the latest in operating techniques as well as bicycle mobile installations gladly register and pay the fee for the opportunity to learn. Most new GOBA bicycle mobile radio operators are experienced so they listen to the operation, often for a season before really participating. There will be many of these hams who will do no more than check in when they leave in the morning so net control knows approximately where they are in relation to the other Adventurers. However, after one or two years, most are smoothly proficient and are handling emergencies. More often than not, most will be involved in some circumstance within four years. Again, these are proficient operators who know how much more important it is to listen rather than talk and it's not unusual to critique the day later in the evening with the medics.

Although this is an unusually intense training opportunity, no reqiurements for participation need be met other than to register.

I should have been more clear in stating that this announcement was for awareness rather than recruiting purposes.

GOBA wants those who are willing to learn state of the art bicycle mobile emergency opertations and more important, those who will take the lead in training others at local one or two day rides.

Our medical organization operates in a similar way. Doctors who are specializing in sports medicine areas join GOBA to experience the cutting edge in large recreational group medical support circumstances. In fact, participation is in such demand and slots so limited that the week is divided into two parts so more doctors can attend.

At this point, GOBA is not limiting bicycle mobile amateurs because it recognizes the these operators are the first line, the point of contact for the riders in need of help.

I hope this answers you question Charlie.

Be sure and sign on to

goba_rider@...

to see what questions are being asked by first time riders. This will help you as a bicycle mobile better understand the new rider's circumstance.

They are often the recipient of our support.

Thanks again for asking.

Best,

Bill

P. S. Where are you? I'm in Ft. Worth

I am a new meber here, I am sorta new to bicycle rideing but not new to ham. I have starting traing for a BRAG ride in 2006 <www.brag.org> is a ride doing appx 400-500 miles in 6-7 days. I am looking for a good but chad bike, in the range of $100-$150, any suggestions?

Thanks
Jeffrey, KD4QFH

Sounds good, my fiance lived near 5th Ave in Park Slope for awhile.

There is a .pdf downloadable map available online with the the NYC
bike paths at:

http://www.nyc.gov/html/dcp/pdf/bike/mapfront.pdf
http://www.nyc.gov/html/dcp/pdf/bike/mapback.pdf

You'll need Adobe 6+ to view them properly though.

Ryan 2/70 bike operation is easier than you think.

The main problem is getting the audio to and from the rig and switching PTT.

I was lucky in that here in the UK there is a headset that has a PTT socket in the control box :)

If you are any use at all with a few basic tools and have half an idea how to fabricate what you can't buy then you'll be on the air within a couple of hours.

Fins a way to mount the antenna. Mine sits on an adadpted bracket on the very rear of my rear rack.
Find some way to mount the rig. My VX-7R is mounted by it's button on the rear to a slightly modified fork typ mic holder that is cable tied to the handlebar stem.

Then route a cable between the ant and the rig, tieing it down to keep it neat etc.

Now is the fun bit. Finding a way to get a headset and PTT working. This depends on the rig, but it's fairly simple but might mean a few minutes with a soldering iron :)

That's it! On the air.

I suggest that you give it a try and if/when you hit problems ask how to overcome them.

The battery on the VX7 seems to last forever, but some people like to carry extra capacity. I can do this but rarely have to. It all depends on your rig an battery.

Just make sure that anything mounted to the bike isn't going to fall off at the first bump. Make sure any cables aren't going to tangle in the works. Try and fit a "break away" between the rig and the headset. if you come a cropper, you want a clean break from the bike, you don't want to be tied to it. I've had 2 mishaps and both times I've been glad of the breakaway.

Use memories when mobile. It's dificult to change channel, insert tones etc when mobile. program you memories for the repeaters etc that you will be using. Even program up the calling channels and simplex frequencies that you might want.
It's easier to dial through memories than it is to try and tune the VFO and hit menus etc.

Use the rig in single band mode. This usually means a bigger display. easier to read when mobile. I now have my VX7 in dual band mode though. One VFO on a broadcast station and the other on memories for my local repeaters. I also use the auto mute feature, so that when my local repeater gets a call, the BC staton cuts out. So I have music and chat if I want it :)

Don't use headphones. Only use a single earpiece. You'll need to be able to hear traffic around you. Keep one ear listening to your surroundings.

With the antenna mounted on the very rear of the bike you WILL be directional. Be prepared to stop and point the bike in another direction if you want to carry on talking :)

There is no real reason why your signal shouldn't be as good as a car based mobile station running the same power. Your bike will be a plenty big enough ground for V/UHF.
I've had people tell me that if I wasn't panting (talking and riding really does take your breath away) they'd never have known I was on a bike.

Get a decent pair of shorts with good padding. You'll be so busy talking away that you will forget where you are and before you know it the ride to the shops has taken you 30 miles away :)
Don't forget to tell everyone you speak to that you are bicycle mobile. Spread the word!!!

Bike mobile is now my main mode of operation. I rarely operate from home now.

Have fun and Happy peddaling

Darren

797. Hi all, need some ideas

Yahoo group: BMHA
Date: 2005-02-11 20:46:22 UTC
From: kf5nd@yahoo.com
Topic: 797 Message: 797

I bike commute to work. I notice a big investment of time at the end of the day seems to be in loading equipment back on the bike. The bag. The lights. The water. Unlocking it. All of this takes 3 - 5 minutes.

I kinda don't want to add "just one more thing" to hook-up to the bike at the end of the day, because if it isn't vital, I'll end up not doing it.

Also, I have a two-bike situation. Don't want to duplicate mounting hardware for two bikes. And I really don't want more hardware on either bike, really.

Now, I am close to the repeater I want to use. So antenna not that important. Have hit it with a few hundred mw and a duck.

Has anyone tried using a credit-card sized HT fastened to one's helmet, with some kind of boom mike? Does that work?

73,
Pete

Topic: 798 Message: 798

Hi BHMA Group,

This is my first post. I've lurked a while at the files
area at http://groups.yahoo.com/group/BMHA/ and I must
say, I'm impressed with your setups and the amount of
pictures in general.

I'll have to get cracking and make a mount for my Kenwood,
TH-F6A and some sort of external antenna. Right now
I am running my Trek Fuel 80, full suspension mountain bike
with the rig on the back of my belt. Maybe I should just
have someone take a picture of my backside!

My battery pack is 14.4 volts using 2, 7.2 volt, 3A, NiMH RC
batteries in series. I use DC/DC switching regulators to supply
3V, 6V and 12V for radios, white and red LED lighting and anything
else electrical.

The batteries are mounted in a Radio Shack plastic mini box on the
down tube near the crank for a low center of gravity/balance.

I will upload some pictures of what I have so far.

Best regards to the group.

First, welcome to the group!

Second, Have you thought about that "..low center of gravity / balance." thing, or are you just following "common sense"? (Remember, "common sense" is what tells us that the world is flat!)

A bike is not a car. A bike has two wheels .. a car has four wheels (positioned around the edges) A bike has to balance to stay upright .. a car does not. Admittdley a bike *when*moving* has some gyroscopic help to stay upright, but balance is of prime importance.

Did you ever try to balance a stick on the point of your finger? Attach a weight to one end of the stick ... now try balancing it with the weight on the top end ... EASY to balance ... now turn it over and try to balance it with the weight next to your finger ... VERY HARD to balance.

How can this be?? After all the center of gravity is much, much lower in the second example, correct? So ... lowering the center of gravity does not always make things more stable. Maybe it's the same with bikes?

And how would you key it?? Trust me, VOX does not work on a bike.

I have an antenna mounted on the rear rack. I've never mounted a rig on the bike. I always attach it to my person. I usually wear "bike clothes" and wear a special belt just to hold the rig on my waist (spandex shorts don't need belts;-)

If you are *really* that close to the repeater an HT on your belt with a stock duckie would work. By the way, just because you have hit the repeater with a few hundred mw and a duck does not mean that once you start riding around that you'll continue to make it into the repeater every place you go.

I tried mounting the battery box high up on the back carrier and mounting it lower and center works best for me.

Luckily my bike has 2 threaded in inserts in the down tube near the crank area, where a water bottle is normally mounted. So the battery box fits and is stable and well balanced for me.

I notice the difference when maneuvering turns.

Take care.

Not this again! A low center of gravity is more stable. Balancing a broom has nothing to do with the center of gravity. As a mater of fact, If the center of gravity is low enough you wouldn't have to balance it, it would stand on it's own.

Back to balancing a broom. The broom balances because the greater mass is at the top. An object at rest tends to stay at rest. The broom head doesn't want to start moving but gravity pulls it and it starts to move. The broom handle has much less mass and is attached to (resting on) your hand so you can move it under the broom head. This keeps the broom head up in the air. The wisk broom is harder to balance because it has a very short, almost non-existent, handle so you can't move it under the head.

You balance a bicycle from the top, not from the bottom. you want to be able to move yourself around on top of the bike without making the bike fall over. You need a low center of gravity to do this. Simple physics. Force is equal to the lever-arm times the force. The lower the center of gravity the shorter the lever-arm gravity has to work with to tip the bike over and the longer lever-arm you have to work with to keep the bike upright. There are other factors that affect the stability of a bike; rake of front fork, height of bottom bracket, size of wheels, etc. But, all else being equal, the lower the center of gravity the more stable the bike.

As for balance, the high center-of-gravity does have some effect,
but in my experience it isn't really a practically large concern.

I have had one (frightening) experience with mass on a bicycle
decent -- but it was because I was carrying a (large, since it was
in the 1970s) professional camera on a neck-strap that was swinging
side-to-side as I descended a mountain road (King's Mountain, if you
know the San Francisco Bay Area).

It was the swinging and not the mass that caused the problem.

High or low mounting should not be much of an issue -- as long as
you can assure that it doesn't shift or swing while "in transit".

Hi Group,

I have uploaded 5 pictures of my bicycle and hardware
for hamming. The radio is used on my belt for now, until I can
devise a sure fire way to keep the little pocket radio from
becoming road trash.

See http://groups.yahoo.com/group/BMHA/. Click on "photos".
Then click on my photo album, "Tom_KE6YNH".

Cheers.

I'm no expert on these things .. but I think these "Cloud 9" messages are from spam blocker software. The software looks at the "From" address and if the name is not already "approved" the software sends the message below to check to see if it was a "real" person or just spam.

However, since messages on this list are delivered with the original senders name (not the list name) then EVERYONE who sends a messge to the list will get one of these messages (at least the first time) .. I assume that if you don't respond the first time .. and you send other messages .. then the software assumes it is spam and blocks it.

This is poor programming on the spam blocker's part ... or if the software has an option to filter on the SUBJECT field instead of the FROM field .. then the problem lies with the person running the software not choosing the appropriate option.

814. Misconfigured spam-blockers and what it does to this group

Yahoo group: BMHA
Date: 2005-02-12 19:36:14 UTC
From: slafetra
Topic: 797 Message: 814

This message is intended to be the definitive END of this particular conversation, as it is off-topic to both bicycles and ham radio. It is annoying and constitutes "spam" in my mind. Proactive steps that you can take are outlined below.

--- In BMHA@yahoogroups.com, "Peter Wang" <kf5nd@y...> wrote:
> Someone's CloudNine spam blocker is responding to my emails, for some
> reason, and telling the whole group about it, which is a poor way of
> configuring the service, indeed.

It is actually quite worse than this. Some members have the Yahoo! group send automatic mail. And some subscribers have such misconfigured spamblockers (see my editorial below).

As one of the "bounce" addresses for this group, I receive 'challenge' responses from such Spam-blockers -- and I >CANNOT< do anything except ignore them. They expect a reply from the group as "confirmation" -- but email replies from this group comes from ME and not the group -- so it is destined to fail.

I frankly don't know what to do. I/we (I am not the only moderator of this group) have only two alternatives:

1) Continue as-is and let this stuff happen

2) Ban (restrict from posting) any member that has such an active-confirmation spam-blocker in place, on the grounds that it annoys everyone else in the group.

Please send me e-mail (BMHA-Webmaster@... is my preferred address, although it is not the one associated with this Yahoo! group) and I will take whatever action (or no action) that the group decides. I'll post the results after sufficient time (Figure April 1st, 2005) on the BMHA website.

Finally, I cannot communicate back to those responsible for the situation (their spam-blocker expects a response from this Yahoo! group, but replies come from my personal address and are just rejected). To this point I simply have ignored them, but the situation is getting out of hand.

If you have other ideas (outside of the ban/leave-as-is poll above), feel free to send them to me at the same address of BMHA-Webmaster@...

Now for my "editorial" -- I have found that the wonderful self-learning Baysian filter "K9" (http://www.keir.net) is a much better and almost-perfect spam filter. Mine is running 99.50% accurate, and this statistic is down from the usual rate. K9 is free, although Robin Keir (creator of K9) appreciates donations and I have personally chosen to send him somthing substantial (in excess of $100) for his work -- but this is MY choice and I mention it here only to indicate how much I value his choice. It is FAR BETTER than the misguided challenge/response mechanism which triggered this message string in the first place.

End of this topic.

Again,
- Skip AA6WK BMHA-Webmaster@...

Hi Scott(N7NET) and the Group,

Scott wrote:

>it would be nice if you could write a story of
>how this project has evolved to its present
stage.

My first interest in putting amateur radios
and electronics on bicycles started when I got
interested in volunteer work in foot races and
walk-a-thons. They needed a bicycle to safely
ride with runners and report injuries to net control.

I also took part in search and rescue efforts. Most of the time
it involved a confused, elderly person who walked away
from a nursing home and was lost. Me in a couple
of years. Hi hi.

I found I could power lights, horn, radios and other
devices of differing voltages using *one* battery pack
and several DC to DC switching voltage regulators, set to
output different voltages, rather than use separate batteries for
each device.

I was delighted to find inexpensive switching regulators circuits
inside Radio Shack cigarette adapters. Some had fixed outputs
and some were selectable in 3V, 4.5V, 9V and 12V steps.

>Do you ever turn heads with the air horn?

I found that riding a bicycle had its risks, so
I wanted to at least have some of the safety equipment
that a car has. After all, we both share the same road.
One problem with a dual, 139dB air horn on a bicycle is
that some cars hear my horn and look around for a car or truck,
not a bicycle. I need a different sound. In most states a siren on a
bike is illegal, so I am developing a bicycle horn based on a piezo
disc. It is much lighter and takes less energy than an air horn. It will
have a with a faster interval rate, around 20 Hz.

Cheers to the Group.

I use A Diamond SG5700A for mobile use. It's a little
longer than most dual band 2M/70cm antennas, but has
gain. See it at http://www.rfparts.com/diamond/sg7500a.html

Good mobil'n.

I use a Watson W-770 and a Diamond NR-770-R
The Diamond is the more expensive, but I find the Watson a better antenna.

I'm not sure if the Watson is available in the States but if it is
give it a try.
It's realtively cheap, light,and kicks really well. It's also black
from top to bottom which suits my bike well.

I've tried longer antennas and they don't seem as good. Maybe it's
radiation angle. My 7/8 (or 5/8 I forget it's been so long since I
bought it) 2M antenna is rubbish on the bike!

Thanks Scott. It's a couple of years out of date now.
I'm in the process of writing my new one which will be at
http://www.goqrp.co.uk
This will have all the same stuff, but info on other contests, my
mobile operation and of course my bicycle mobile operation as well as
QRP working.

The new site is 80% complete but I don't want to upload it until it's
all done.
I keep changing my mind on the look and content. At this rate it
should be finished and online by 2008 :)

At the moment the site just has pictures of my mobile station.

Watch this space for more info... But don't hold your breath :)

I use a simple ½ wave J-Pole (dual band) taped to a fiberglass bike flag pole on the back of my bike. It is cheap, and works really well. Being a ½ wave, it doesn☐t need a ground plane like the ¼ or 5/8 wave. I simply stick my HT in my handlebar bag, attached to either a speaker mike for mostly monitoring use, or to a headset if I plan on doing a lot of talking. I☐ve carried it on several week long trips (Bike Ride Across Georgia), and have been very pleased with the setup.

I am using the Diamond NR-770HA. It is a dual band with the 2 meter portion being 1/2 wave. This antenna works very well on both bands and also serves to mount my flag on the top of the antenna. I ride a recumbent and the flag helps to be seen on those roads that are not shouldered. I can't remember the exact price, but seems around $45 USD. It removes easily with the standard UHF connector and one could connect a piece of coax to the antenna mount and connect to another remote antenna or dipole when stopped or camped.

Keep to low gain antennas unless you *really* need them. Something like the Comet SBB-1 is good; it's flexible like a "super ducky" but actually works. The flexibility is great so you don't have to worry about busting the antenna (or yourself) when you swing a leg over the bike.

The problem with a gain antenna is the radiation angle. You need to keep the antenna vertical, or else you are wasting power heating the ground behind you.

One person I met made a 2m dipole and used heat shrink tubing to attach it to his fiberglass flag whip.

Hi Ryan,

You might want to check page 31 of the March 2005 QST.
If you think it's too big (which it probably is) you
could check out the trailer displayed at:
http://www.bikerev.com/. Ian will sell you just the
frame, tongue, and wheels. You can build yourself a
portable station with packet and the who shebang, and
do some serious hamming when you're so inclined.

I talked to a fellow at Richardson Bike Mart
http://www.bikemart.com who built a boom box in one
and blasted his way across Oklahoma. Can you imagine?

The possibilities are endless...well, almost.

I'm not sure if this has been said here, but the 2 meter J-pole does work on 70cm. That's because 70cm is the 3rd harmonic of 2m. Running a 2m jpole on 70 is not the most efficient, but it does work.

I found a QST article on the web that describes a true dual band j-pole (eliminating the problems of operating on the third harmonic). It can be built into a length of 3/4 inch PVC pipe.

Hi John,

I use a Bob Yak, and Russ KB8U uses one also with his recumbent. Russ mounts his hf mobile antenna from the Yak, with coax to the bike. I've mounted Solar Panels on mine, but I've always kept the rig and batteries and antenna on the main bike. (The Bob Yak is GREAT for hauling all the other stuff!)

My Elecraft K2, with internal batteries, is probably close in weight /size to the compact 100W rigs. My K2 is mounted right on my handlebars. You could consider mounting heavy batteries and the antenna on the Bob Trailer, and cabling to the bike. You might also want to consider a radio with the separate control panel (eg Icom 706) - you'd have to confirm the maximum length for the extention cable from radio to the control head, but I suspect you could get away with the control head on your handlebars, and the radio, batteries, antenna on the Bob trailer behind it.

Here are a couple of pix showing my trailer and Russ's:

Hi,

I don't have any experience with the rigs you
emntioned, but I do have some QRP experience. I have
was operating 27 miles north of the Mexico border a
couple of years back, and I have cards from Alaska and
Hawaii while using 9-watts SSB.

The key is not the power as much as it is getting your
SWRs down as low as they will go.

I used to work KB7LOC in South Beach, Oregon from the
same location using CW. He used one-watt, while I was
using 3. We didn't always make it, but we certainly
recall the times we did.

From: Jake
Topic: 833 Message: 836

While I originally set up my bike for the FT-817 mounted to the handlebars, I have since tried the IC-706 on the same platform. Then I used a 17 AH battery mounted on the rear bike rack. I also use a shortened 1/2-wave antenna 13 feet long. That makes a big difference. Instead of max current being below seat level, it is around 8 feet above the ground.

No photos yet of the 706, but here are some photos of the QRP setup:
http://hometown.aol.com/n0lx/bikemobile.html

And here is the homebrew 1/2-wave high-power tuner that is also mounted on the rear rack:
http://hometown.aol.com/n0lx/images/hipowertuner.jpg

A better design would defintely include the detachable head on the handlebars with the radio down low: perhaps on the bike rack or...

Thanks for the responses to my original post...

Jake, a follow-up to your message. I looked at your photos, nice setup! Just curious, is there some reason you went with two loading coils instead of just one?

I imagine that's a pretty light weight fishing pole you're using. Does it whip around much when you're peddling down the road?

Thanks,
John Pfeifer - KL0WN

>Just curious, is there some reason you went with two loading
coils instead of just one?

Hi John. The antenna is a shortened 1/2-wave, not a 1/4-wave. If you were to shorten an ordinary dipole, you would use a coil near the middle of each half-side. That is exactly what I have done, but I feed the dipole at the end instead of the middle. The benefit is maximum radiation (current) eight feet above the ground and in the clear! Also, the antenna is independent of ground and so does not depend on the bike frame as a counterpoise.

>I imagine that's a pretty lightweight fishing pole you're using.

Very light. I'm using all but the bottom section of a 16.5' Black Widow fishing pole.
I just pulled out the scale and weighed it:
6.5 ounces for the pole
4.0 ounces for the antenna with coils.

>Does it whip around much when you're peddling down the road?

Well, I'm sure it does to some extent. But the pole is pretty rigid, and I can't feel any difference with it on the bike. The 40-degree (+/-) back slope probably buffers more of the torque than if it were straight up. The slope is to keep it under the legal height limit.

Hi, Don. I'm also a middle aged guy (age 79) who is more than a bit out of shape. Maybe I'm past middle age. This is the ideal year to ride GOBA because it starts in Findlay, the home of the Hancock Horizontal Hundred bicycle tour. I've ridden GOBA only once. That was a year when I was in better shape, so I rode from home to the start and back, a total of 1100 miles. I was bicycle mobile ham that year.

This year I'm cheating. I volunteered to be a SAG after I registered for the tour. In a way I'm sorry I did that, because I'd like to ride that flat ride. I picked GOBA because it's in a flat area this year. I stay away from it when it's in the hilly areas. Even though I live in a hilly area of Western Pennsylvania I'm not a good climber.

On my bike I use an HT with a half wave antenna mounted on the rear carrier. The antenna sways back and forth a lot but it reaches out without needing a ground plane.I found on GOBA that I could always reach the repeater. In my motor vehicle I use a Radio Shack 2 meter mobile unit with a magnetic mount 5/8 wave antenna. My license plate is my call. Look for my maroon GMC Safari on GOBA. I'll have my bike along for ice cream trips in the evenings.

Thank you Jim and Dave for the Wellcome to the group. It's hard to think about riding today as we have a lot of snow on the ground here in Mi . At the moment I have a Treck modle 800 hibread mountin bike and it has not worked out good for me. Just not a comfortable ride. We are looking at getting something diffrent, with a more uprigt position. The xyl is thinking one of the comfort bikes and I am looking at the hibread style Treck. I think the narower wheel would preform better on longer rids. I am also trying to think of some way to modify a cell phone headset to work with my Kenwood HT. Not sure how to handle the PTT yet. Any way hope to be mobile soon .

The next International Space Station's Expedition 10 ARISS school contact will be with students at St. Martins Luthern College in Mt. Gambier, South Australia on Thursday, 17 March 2005. The event is scheduled to begin at approximately 10:24 UTC.

This contact will be a telebridge between stations NA1SS and WH6PN in Honolulu, Hawai'i, so it should be audible to anyone in the areas of the Pacific near the islands listening in on the 145.80 MHz downlink. The participants will conduct the conversation in English.

"St. Martins Lutheran College has 340 students from Reception to Year 9. It is situated in Mt. Gambier in the lower south east of South Australia. St. Martins offers a Christian education to students and prides itself in excellence at all levels."

Audio should be available for this contact
Via EchoLink in the following conference rooms:
AMSAT node 101377
EDU_NET node 77992
See further notes below
Via IRLP Reflector REF9307 starting at 10:24 UTC
REGISTRATION REQUIRED (see below)
Via the internet:
URL: https://e-meetings.mci.com/
CONFERENCE NUMBER: 6503441
PASSCODE: SPACE STATIO

Students will ask as many of the following questions as time allows:

-Where do you sleep in the space station?
-What do you eat for meals in the space station?
-How long does it take you to go around the world?
-Have you met the first astronauts that went to the moon?
-Is it possible for a baby to be born in space? What would be the difficulties?
-Did previous space missions or science fiction inspire you to become an astronaut?
-What is it like to be a part of NASA's great plans?
-What do you do about cleaning your clothes in space?
-What are the things you had to study to become an astronaut?
-What do you do if you have a disagreement with another

astronaut?
-What can you see on earth from the space station?
-What is your favorite meal on the space station?
-Can you talk to your family from the space station?
-Can you see the planets from the space station?
-Can you light a fire in space?
-What do you do for recreation in space?
-What do you do to prepare for a trip in space?
-What is your greatest experience or memory of space?
-What do you do in the case of a blood nose in the space station?
-Is there an age limit to being an astronaut?

Please note, the amateur equipment on the ISS will be turned off prior to the beginning of the contact. It will be returned to service as quickly as possible.

ARISS is an international educational outreach program partnering the participating space agencies, NASA, Russian Space Agency, ESA, CNES, JAXA, and CSA, with the AMSAT and IARU organizations from participating countries. ARISS offers an opportunity for students to experience the excitement of Amateur Radio by talking directly with crewmembers on-board the International Space Station. Teachers, parents and communities see, first hand, how Amateur Radio and crewmembers on ISS can energize youngsters' interest in science, technology, and learning. Further information on the ARISS programme is available on the website http://www.rac.ca/ariss (graciously hosted by the Radio Amateurs of Canada). Information about the next scheduled ARISS contact can be found at http://www.rac.ca/ariss/upcoming.htm#NextContact.

IRLP Notes
Participation in this contact is limited to 20 connections and requires pre-registration.
Please contact Wayne, VE1WPH, via e-mail at ve1wph@... for pre-registration and connection instructions.

EchoLink Notes
The contact between the ISS and school lasts for about 15 minutes +/-. During this contact, we appreciate everyone's patience and understanding. We must mute everyone except Dieter, KX4Y to avoid inadvertent, interfering transmissions into the conference room. Thanks for your understanding and cooperation.

Thank you & 73,
Scott H. Stevens / N3ASA
ARISS Team Member

Topic: 846 Message: 846

Hamvention 2005 -- BMHA Forum at Dayton

The 15th Annual BMHA (Bicycle Mobile Hams of America) forum will be held at the Dayton Hamvention on Sunday May 22nd. Mike Nickolaus, NFØN, will be forum moderator and speaker.

Our special Guest speakers will be:

Bill Carpenter, AA8EY and Mary Carpenter, N8OAM who were members of the Great Ohio Bicycle Adventure, GOBA, staff for 7 years. Mary was SAG Coordinator and Bill was the Amateur Radio Coordinator for GOBA. They will talk about the role Amateur Radio plays in this large annual week long bicycle event. They will relate some experiences and generally describe their activities in working with many people and amateur radio operators during the 7 years they served the event. Mary has been an Assistant Section Manager for Ohio. Bill served as ARES Emergency Coordinator for Franklin County, Ohio and is currently an Assistant Section Manager for Central Ohio.

Room details and forum time will be posted on the BMHA website as they become available.

All who have an interest in bicycling and bicycle communication are welcome to attend.

Mike Nickolaus - NFØN BMHA Secretary/Treasurer

847. The Future of Amateur Radio Licensing The Facts

Yahoo group: BMHA
Date: 2005-03-22 23:10:37 UTC
From: g3zhi@hotmail.com
Topic: 847 Message: 847

The Future of Amateur Radio Licensing ? The Facts

During autumn of 2004 at about the same time as Ofcom published the consultation paper - The Radio Spectrum Framework Review, RSGB was led to believe that a further consultation paper concerning the future of amateur radio licensing would be published, probably early in 2005.
In preparation for that document the RSGB intimated to Ofcom representatives, on an unofficial basis, that the Society would be prepared to assume the responsibility for issuing licences and all the administration that would involve. RSGB was aware that Ofcom wished to substantially reduce its financial commitment to licence issuing, particularly the resources currently involved.
During February 2005 it become apparent that Ofcom had abandoned the idea of a consultative document and was preparing a ?proposal document? that would set out Ofcom?s intended preference and in which some reference would be made to low priority alternatives. This would pay lip service to consultation and instead would confirm Ofcoms proposals.
The Society began to realise that the intended preference was to tempt amateurs with a free licence for life and then after a few years completely de-regulate our hobby.
The free licence for life was going to be proposed in such a way that amateurs would think they were going to get a good deal and then once that had been accepted Ofcom would re-visit the licensing issue and then de-regulate. We must be on our guard as they have made the de-regulation statement both in the ?Spectrum Review? consultation document published in late 2004 and in the yet to be published ?Future of Amateur Radio Licensing? consultation document. It is vital that we stop any attempts to de-regulate the hobby, therefore we must oppose any movement towards a license for life.
De-regulation would disenfranchise all UK radio amateurs.
De-regulation would remove the need for examinations.
De-regulation would mean anyone operating on the amateur bands in the UK would not need a licence.
De-regulation would mean that ALL UK radio amateurs would be prevented from operating abroad under CEPT agreements.
De-regulation would mean any UK amateur moving abroad would be unable to participate in reciprocal licensing agreements.
De-regulation would mean the end of the repeater network.
De-regulation would mean the end of the packet network.
De-regulation would mean the end of Notices of Variations.
De-regulation would mean the end of band-plans in the UK.
The RSGB is not prepared to see the hobby of amateur radio in the UK destroyed.
The RSGB does not intend to be enticed by short-term promises of a free licence.
The RSGB will do all in its power to prevent de-regulation.
The RSGB has approached authority to highlight the dangers of de-regulation. As a

result of our initial approaches the Ofcom Board has thrown out the immediate publication of the supposed consultation document. They have referred back the document for re-evaluation.
The RSGB has over 80 years of amateur radio experience and we are prepared to challenge Ofcom arrogance.
We deplore ?preferred option? being issued under the guise of consultation.
We will now seek a document that is genuinely ?consultative?.
Please support your Society in this campaign.

Hi Ian(G3ZHI) and the Group

It sounds to me, Ian, that you are happy to be controlled and regulated.
Don't you think it is about time hams regulate themselves?

Now, onward to bicycle mobile topics.

Thank you.

856. ISS qso relayed live over echolink 1637gmt 29/3/2005

Yahoo group: BMHA
Date: 2005-03-28 20:29:56 UTC
From: g3zhi@hotmail.com
Topic: 856 Message: 856

Hi all

The next two contacts between the International Space Station (ISS) and schools are as follows:

Tuesday, 3/29/2005 at 16:37UTC

Friday, 4/8/2005 at 18:12UTC

The times given are when the ISS comes into view for the involved ground stations. I will be connected to the AMSAT and *EDU_NET* conference room servers from about one hour before the contact starts. Introductory comments will commence about 10 minutes before each contact, and there will be some more comments for about five minutes after each contact.

Please see the "Calendar of events" at http://www.amsat.org for more information.

73 de Dieter kx4y

Audio should be available for this contact
Via EchoLink in the following conference rooms:
AMSAT node 101377
EDU_NET node 77992
See further notes below

Please note, the amateur equipment on the ISS will be turned off prior to the beginning of the contact. It will be returned to service as quickly as possible.

ARISS is an international educational outreach program partnering the participating space agencies, NASA, Russian Space Agency, ESA, CNES, JAXA, and CSA, with the AMSAT and IARU organizations from participating countries. ARISS offers an opportunity for students to experience the excitement of Amateur Radio by talking directly with crewmembers on-board the International Space Station.

Teachers, parents and communities see, first hand, how Amateur Radio and crewmembers on ISS can energize youngsters' interest in science, technology, and learning.

Further information on the ARISS programme is available on the website http://www.rac.ca/ariss (graciously hosted by the Radio Amateurs of Canada). Information about the next scheduled ARISS contact can be found at http://www.rac.ca/ariss/upcoming.htm#NextContact.

EchoLink Notes
The contact between the ISS and school lasts for about 15 minutes +/-. During this contact, we appreciate everyone's patience and understanding. We must mute everyone except Dieter, KX4Y to avoid inadvertent, interfering transmissions into the conference room. Thanks for your understanding and cooperation.

Thank you & 73,
Scott H. Stevens / N3ASA
ARISS Team Member

MS150 Houston to Austin, Texas

Date: Saturday, April 16, 2005
Time: All Day

This is a two-day, 180 mile ride

To register: www.ms150.org

To volunteer for ham radio support: kf5nd@...

858. VX-7R waterproof test :)

Yahoo group: BMHA
Date: 2005-04-06 21:12:02 UTC
From: Darren
Topic: 858 Message: 858

I've just returned from my nightly 10 mile ride.
A mile into the ride the heavens opened. It was already very windy and the rain came down in buckets.
Being somewhat insane I decided to carry on with the ride, after all, you can only get so wet :)

I was out in the rain for about 45-50 minutes, talking on my local net linked repeater. Not once did the VX-7, which is mounted on the handle bar, complain.

On returning home, I checked the rig out. Took it out of it's carry case and it was wet but sound. No misting in the display, nothing.

It's been out in the rain many times, but never as hard as this or for as long.

10/10 to Yaesu for making such a great rig.

From: Redding, Walt
Topic: 859 Message: 860

Darren, good to hear about the Yeasu faring well in the weather. I've been reluctant to use my vx-5r on my trike, but maybe it would be ok as well. I have been using a Radio Shack htx420, and I dealt it some major abuse the other day. It fell out of it's mount on a particularly bone jarring descent about 35 mph and was dragged by the external mic cord a good 50 yards or so before I realized what happened and could get stopped. Scuffed the paint up pretty bad and put a small crack in the edge of the display, but it's still working fine. I know they take some heat for a lot of their stuff, but this rig is hanging in there tough.

The mount is simple.
I just use a standard fork type mic clip. The sort of thing we have in the car to hang the fist mics on.

I have slightly bent the forks using long nose pliers to make the fitting tight enough to hold the rig. This holder is held onto the bar stem (the vertical bit) with a few small cable ties.

The button on the back of the rig that the belt clip clips to, fits this mic holder very nicely indeed.

For audio I use and Alan MA-35 headset (http://tinyurl.com/4de3d)
This has a PTT switch and a socket for an additional PTT switch.
I have a PTT switch mounted on the handlebar near the right hand brake lever.

A cable with a plug on each end runs from the PTT socket to the PTT switch.

The mic element has a foam wind deflector and this does a remarkable job.
People have commented how good the audio sounds. Many have said that if it wasn't for my heavy breathing, they wouldn't have known that I was on a bike :)
Received audio from the single speaker is also to a good quality.

I ALWAYS keep the rig in it's carry case, for two reasons.
1) It keeps the worst of the rain off, even though the rig is waterproof, it's better to make sure.

2) When the rig does (rarely) come seperated from the bike, the case protects the rig from scratches and softens the bump slightly :)
The rig has gone flying twice, both time quite violently, both times not a mark on it. I will add that these two occasions I went flying too :)

The rig has never fallen off just because of bumps etc. It's always due to me supidly coming off the bike. I'm getting too old to be falling off bicycles :)

The VX-5 isn't waterproof. It's certainly rugged enough to use on the bike, I used mine that way, but watch the rain. Use the carry case if you have one.

From: Harry G. Seyfert
Topic: 858 Message: 862

Hi All,
I've been following this thread on using the VX-5 and / or VX-7 and wanted to put in my 2-cents worth. I have a VX-5 and have been using it for a few years now. My method is to drop it into one of the side pockets on my Cannondale handlebar bag. I use a Diamond RH 771 high gain antenna and poke the antenna up through the nylon shoulder strap buckle. It has never come out due to a fall, railroad crossing, pot hole, etc. I have worked our local repeater from about 32 miles (50 km) away. I use the standard Yaesu MH-34B4B speaker-mic and clip it to the edge of my map case or to my jacket collar. Only thing I can't easily do is QSY, since my radio is down in the bag pocket, but, when you live in the area of one repeater only, it doesn't matter. My next project is to fashion a "J-Pole" of twin-lead and a fibre-glass flag pole. That should help my signal considerably.

863. Re: Bicycle Mount

Yahoo group: BMHA
Date: 2005-04-09 23:00:53 UTC
From: Allan Howell
Topic: 863 Message: 863

Greetings...
For mounting my TH-F6 I took a length of reinforced tygon tubing 1 1/2" diameter and the length of the rig. Cut for the face and keypad on the front. Left enough on the bottom (1") to grip the front. The tubing is so stiff the rig does not move. I clip the belt clip over the top. Also use a beam clamp in the middle of the back to fasten to the handlebar on my Tour Easy. It works.

Tried taking an FT-817 on the bike but the vibration was just too much for that rig. Also the whips kept coming unscrewed. Back to the drawing board. Maybe more padding around the rig.

Always enjoy reading the posts on this group. Been lurking for quite a while. Best 73...Al

That's what I did. I took a twin-lead j-pole and secured it to a fiber-glass rod by wrapping a roll of orange "safety" tape around the antenna and rod. Then used electrical tape and heat shrink tubing on the ends to keep it from unraveling. I then attached my safety flags to the rod for a dual purpose antenna/flag pole. It seems to work pretty good, and more importantly, I can be seen...

Walt,

When you wrapped the j-match on the pole with tape did
it change the spacing on the twin-leed? If it did,
did the swr change?

It doesn't make any difference which side of the j you
feed. It works either way.

Scott, N7NET

I□ve used a J-Pole made of TV twin lead taped to a fiberglass bike flag pole (minus the flag) for years. It works really well. The ½ wave J-Pole puts out a wonderful signal on two meters (and doesn□t need a ground plane, so it□s great for a bike). The flag pole is only about a quarter of an inch in diameter, and it□s made for mounting on a bike. It will sway somewhat, especially if you□re humping up a hill, but it won□t affect your balance at all.

868. Hello from Ft.Worth

Yahoo group: BMHA
Date: 2005-04-12 11:00:36 UTC
From: jman
Topic: 868 Message: 868

Hello fellow bike hams from Ft. Worth.
It's a small world and ham radio helps operators from around the country get to know each other like no other method I know of. A funny thing happened the other day. I ran across another guy in a bike reflector who was also involved with recumbent bikes. Turns out he too lived in the Ft. Worth area and we started comparing notes about where to ride. I was "picking his brain" because he was a veteran of the great Trinity Trails riding paths that are rapidly becoming famous for their quality trails and beautiful surrounding scenery. After a handful of emails, it turns out that we shared a lot more in common than recumbent bikes, Walt turns out to also be a fellow ham operator KJ5ZF! Long story short, Walt told me about this group so I jumped right in and already have picked up some great riding tips. My first project is going to be the mobile "whip" j-pole from info I have gotten from y'all. Glad to be aboard.

Hey Rick, if I am not mistaken, the Pocket Tracker was designed to be
used with ht's from the beginning. I've looked at them and sometimes
you can even get one on ebay, I just haven't run into one at the right time
when I had the cash. I say go for it.

Actually, the pocket tracker is designed to be used without a seperate
radio. It has its own transmitter built in. I have not used the
device, but it runs on batteries, and you would be hard pressed to find
something more portable. One concern is transmision range. It is low
power, but their website claims that it makes better use of the wattage
than a typical radio because it is not tailored to voice frequencies.

http://www.byonics.com/pockettracker/

I have not used the tracker, but it seems to be interesting, and I am on
the fence whether or not to just buy a kit to play around with.

Subject: [BMHA] Hello from Ft.Worth

Hello fellow bike hams from Ft. Worth.
It's a small world and ham radio helps operators from around the country
get to know each other like no other method I know of. A funny thing
happened the other day. I ran across another guy in a bike reflector
who was also involved with recumbent bikes. Turns out he too lived
in the Ft. Worth area and we started comparing notes about where to
ride. I was "picking his brain" because he was a veteran of the great
Trinity Trails riding paths that are rapidly becoming famous for their
quality trails and beautiful surrounding scenery. After a handful of
emails, it turns out that we shared a lot more in common than
recumbent bikes, Walt turns out to also be a fellow ham operator
KJ5ZF! Long story short, Walt told me about this group so I jumped
right in and already have picked up some great riding tips. My first
project is going to be the mobile "whip" j-pole from info I have gotten
from y'all. Glad to be aboard.

874. Pocket Tracker.

Yahoo group: BMHA
Date: 2005-04-13 21:41:33 UTC
From: Barry Bogart
Topic: 874 Message: 874

Yeah, really low power! I can't believe it gets very far (of course you may have lots of nearby digis). I use a Yaesu VX-2r now with a TinyTrack 3 and it isn't too bad. I can get 3w out of the VX-2r with external power, and use a half-wave Larsen whip with it. But when I ride into the stix (frequently) even my D-7 doesn't work.

Try a TT3 with your current HT - that kit is a no-brainer, IMHO. You probably take an HT on the ride anyway, right? The Pocket tracker is intended for non-hams to carry, in something liek a closed-circuit event.

875. VHF Bicycle Mobile

Yahoo group: BMHA
Date: 2005-04-24 03:27:54 UTC
From: Jake
Topic: 875 Message: 875

While I reconfigure my HF setup, I thought I would try 2 meters for a while. I made up a colinear J-Pole, and strapped the HT to the handlebars. I have used it the past couple days riding to work. It sure makes the miles go quickly.

That 8-foot antenna really works. I am a big fan of using as big an antenna as I can. I had to keep the total height to 9.5 feet, because there is a pedestrian bridge on the bike trail that has a 10-foot ceiling.

Here's a page I put together with a few pictures of the setup:
http://hometown.aol.com/n0lx/vhfbike.html

Here is where I found the info on the colinear antenna:
http://home.comcast.net/~buck0/llccoolj.html

I took a bike ride yesterday and gave the 2-meter colinear J-Pole a good workout. The farthest contact was around 55 miles on simplex, but I was pedaling up Lookout Mountain west of Denver with a clear view to the North, East and South. Nice 15-mile ride and several contacts.

The only problem I have is with the ear bud/dangling microphone setup I am using. When I encounter much wind, it drowns out my voice. Maybe I'll try wrapping some foam around the mike.

With a headset, I put some black "electrical" tape over the vent holes
in the boom microphone.

With my in-the-ear microphone, I turn my head slightly (the ear with
the earpiece pointing slightly forward).

Both techniques have worked well for me.

I use a single ear headset with a foam windshield over the mic.

http://www.maplin.co.uk/Free_UK_Delivery/Alan_456_Headset_29241.htm

I get superb audio reports, and wind noise is rarely noticable, and it
gets pretty windy here in South wales :)
This headset also has a socket for a PTT switch. This switch is
mounted on the handlebar and allow easy hands free operation.

What about one of the throat mic setups that I've seen
available on ebay? If they work as planned then wind
noise would be eliminated.

Thanks, all, for the suggestions. I will look into the throat and ear mics.

For now, I need something with a 2.5mm stereo plug that will fit the adapter box I made. Today I found a behind-the-neck headset made for cell phones. It has a boom mic with foam and claims noise-cancelling features. It will do triple duty for the bike, cell phone and chordless at home.

Jake (N0LX) said: For now, I need something with a 2.5mm stereo plug that will fit the adapter box I made. Today I found a behind-the-neck headset made for cell phones.

Now Dave (nd4su) wonders: How can I get a setup like that to work with my Yaesu FT-50s? I have a ear/boom setup with a remote PTT, but the Yaesu ft-50 has a unique 4(?)-contact speaker/mic jack in it.

I'd like the flexibility of using one of the many, many models available with a standard 2.5 mm plug. What do I have to do to get there? Adapter box? Anyone have experience there?

Thanks

Dave

From: Jake
Topic: 875 Message: 882

Dave,
My Standard HT has two mono plugs. One is for the headset and one for the mic. Perhaps those are the four connections on your radio as well.

I discovered that the PTT switch simply needs to connect a break in the microphone wire and the radio is automatically in TX mode. I also found that the tip of a cellphone plug is the mic, the center ring is the earphone and the base is common.

One thing I would suggest: If you make an adapter box, you might want to use a standard 1/8-inch stereo jack instead of the 3/32" (2.5mm), then use an adapter to bring the headset up to 1/8-inch. I found the smaller jack to not have very tight connections, and I have to fiddle with the plug to get audio sometimes. This was with the RS model 274-245 submini phone jack.

So my adapter consists of a small plastic box with the headset jack, a shielded wire out for the momentary-on PTT switch on the handlebars, and two shielded cables going to the radio.

From: Marcie Mathis Stilwell
Topic: 883 Message: 883

Hi,
I thought this sounded interesting...

Friday May 13th, the Tonight Show will feature a message sending/receiving contest between a cell phone text messaging team and a morse code team. The morse code team will consist of Chip Margelli, K7JA and Ken Miller, K6CTW. Chip and Ken do a lot of contests and DXpeditions. Joe Drago, props manager for the show, is KF6OCP.

Just a reminder of the BMHA Hamvention forum Sunday, May 22nd 8:30-10 AM in Room 2. Bill, AA8EY and Mary, N8OAM, Carpenter are our featured speakers and will present the communications and logistics the Hams provide for GOBA. Anthony, AB0XP will have a power point slide show of his Easy Racer recumbent HF setup. Stephen, KC9EKU will have his Greenspeed trike on display and will be available for Q and A on how he has it setup for VHF.

Hope to see many of you there, we have an excellent group of excellent speakers this year.

I have been using something called a step drill that looks like this.
http://www.goodmart.com/products/85433.htm

I use it for cutting holes in mint-tin project boxes, too. I think I
paid $23 at the local hardware store.

If school wasn't out in most of the country, I'd tell you to go to your local Vo-Tech high school and ask them to do it for you. Other than that, get a Uni-Bit. It's a stepped drill bit. Comes in handy for lots of projects.

Thanks for all the inputs. Years ago i had a Unibit, no idea where it has gone to - probably leant it out to somebody. anyway, i think i'll go buy another, since i'll probably be using it quite a bit (?pun). now i even have a decent drill press to use it in.

will also start collecting ideas for more locations to mount things on my new commuting bike - actually a WizWheelz trike:

http://www.wizwheelz.com/images/v36/papa485.jpg

eventually hope to get into HF, but for now i'll just do some VHF yammering while i'm riding in.

I broke down and bought myself a 3/4 hole saw with a mandral from home-cheapo. It's overkill if you only need to drill an occasional hole but I consider any project has a requirement to buy at least one new tool!

890. Wireless Headset

Yahoo group: BMHA
Date: 2005-05-25 15:53:10 UTC
From: jim h
Topic: 890 Message: 890

Greetings all,
I am batting an idea around in my head and thought I would throw it out for comments.
Right now, my radio is in my pack with the ptt and headset wired to a bracket on the bike. Then my headset and ptt connect to the bracket as if the bracket were the radio. It works great but, when I get off and on the bike I have to un-plug and plug back in. Also, it would be really cool to still be able to hear the radio when I am away from the bike, even if I am away from the ptt switch.
The idea I am thinking of is, can bluetooth technology be adapted somehow to allow me use a bluetooth headset and remote receiver on the radio?
Has anyone tried this? Any other ideas?
Thanks,
Jim

Jim I've tried to use one of those bluetooth things that hang in /on/over your ear (a bit like Uhura in Star Trek) for my phone... It was useless. Too much wind noise even at low speeds, and difficult to hear the other end. I gave up after trying many combinations of position and wind protection and now I stop the bike when the phone rings :)

As for the radio, you'd not only need some way of getting the audio from the rig to the bluetooth thingy (excuse the technical terminolgy) but you would also have to sort out the PTT as VOX would be useless. I suppose that the PTT line could stay on the bar.

Thinking about it....

I have a pair of 446 walkie talkies. I could use the VOX on a 446 on my waist, via my existing headset, to transmit my voice to the other 446 on the bike, this then could be wired to my VX-7. The existing PTT could then put the VX-7 into TX.

The VOX on the bike mounted 446 rig could transmit the bikes audio (received) back to the headset rig.

There are many downsides to this, the 446 rig being permanently in TX as VOX and bike mobile don't mix very well.

This would be a lot of faffing around and cabling just to do away with the wires from the headset to the bike :)

It would be a nice project though.

Hi Darren,
yes, this is definately a side project. I have used an ht in my bag before that could do the cross band repeat thing before, and talk through it with a uhf on my person and that works pretty well, but still, you are using 2 rigs to do that with.
I just rode our local diabetes ride this past weekend. My setup did really well, I was well pleased. But at each rest stop, there was all the un-plugging to do.
This is just one of those things that is flying around in my brain wondering what is possible. What I know about bluetooth is how to pronounce it, after that, I'm lost.
Jim

Admittedly, a handlebar PTT switch is safer, but how much safer is debatable. When I run Bike Mobile I mount the rig on my belt, and use a latching PTT somewhere on my person. The only thing that I would have to plug and un-plug would be the antenna (mounted on the rear rack) Since you use an antenna on the rig (I assume) then you wouldn't have to unplug anything.

To operate my rig, I take one hand off the handlebar and squeeze the switch, then I am free to move the hand back to the handlebar for the length of my transmission until it is safe to switch off. I suppose it depends on how much 'traffic' you have to deal with .. both on the road and on the air.

On a similar note -

I wasn't thrilled with the result after cramming my Heil Traveler into my helmet, so I bought one of those "ear-mic" things from eBay that pick up sound via bone conduction to the ear canal. I bought the Yaesu version (so I can also use it with my HT) and found the mating jack but haven't got around to wiring it up to the FT-817 yet. Just wonder if anyone has tried this type of ear-mic and if so, how it worked?

Mine works fine (an old 15-year-old model called "EarTalk".
Unfortunately, it is not bone conduction (as near as I can tell) but
a sensitive microphone in the ear canal (I do believe that the sound
comes through the head rather than through the circuituous air
channel).

Picks up lots of wind noise, but it is easily tuned out by turning
your head (in my case, about 5-10 degrees away from the ear (e.g.,
the ear with the mike is leading). I love mine and would not go
back to the headset I used before.

Sounds a bit "hollow" (think speakerphone) however.

I remember years back when I was on 11M there was a wireless mic that
used 49Mhz to transmit to the radio. It even did the PTT. As the
receiver picked up the signal it put the CB rig into transmit.
If it could be done 20 years ago then it should be easy today :)

I would think so.

My big idea is to take the rcvr/repeater/whatever it is that picks up the bluetooth headset signal and only use the audio out and in connections to hook to the rig. Then have the ptt hard wired out to my handlebar the way it is now. So, basically the headset is transmitting with each noise into it (vox), but the radio isn't reacting because the ptt has not been activated.

898. Wireless Headset-suggestion

Yahoo group: BMHA
Date: 2005-05-26 16:23:30 UTC
From: Arnie Grubbs
Topic: 898 Message: 898

Hi Everyone,

Just thinking out loud here, and thought I would throw out a
few ideas.
How about some sort of low power BC band FM wireless transmitter, and a FM receiver? (part 15?)
Of course this would only be the link from the bike to the rider and
you would have to either use a mic. or paddles separate from
this set up.

Even so, you could monitor things while a short distance
away from the bike.. and if your receiver is on your belt you would not
have to worry about ripping things up if you get off the bike in a hurry.

Something like these transmitters -

" http://www.amazon.com/exec/obidos/ASIN/B0000DK6II/ref=pd_sxp_elt_l1/104-2888083-7335158
"
This one has an on/off switch.. which is nicer (I think) than the auto on/off ones.

Or build a DIY 3 or 2 transistor FM mike circuit like on this page.
" http://www.edmdesign.com/mic.htm "

Note that you would probably want to remove the first transistor (mic amp)
if you are going to feed receiver audio into it. This one is 'mono'..

And use a Walkman receiver on your belt, or one of those "in your ear" BC FM receivers.

Myself, if I was only going to be running VHF/UHF via an HT on my bike,
I just use a speaker mic. clipped to one of the brake cables on the steering 't'.
And as the t is about chest level, with the mic. faceing me, it is only a foot or
so from my head and seems to work nice. This works for both my Burley Limbo or
my Lightning Phantom. I put the HT in a bottle cage on the 't' with some padding
and velcro, and run a cable to a 5/8 wave attached to a tab sticking out from the
rack over the rear wheel.

{thinking out loud again}
I hope to be doing some HF Bike moble in a while (after broken leg heals up) and
I was looking at using the FM BC wireless for that. Most everything would be mounted
in the trunk on the rack behind my seat, except for either a mic. or paddles, and
maybe a home brew freq. readout for FT-817 to mount on the handle bars.
The radio would be next to the battery and tuner in the 'trunk'.

The Belkin FM stereo broadcaster would be nice for HF, but you would have problems with
it on FM rigs since it auto-powers off if there is no audio (squelched RX).
"

http://catalog.belkin.com/IWCatProductPage.process?Merchant_Id=1&Section_Id=&pcount=&Product_Id=140984#
"

If you do use a stereo BC'er you probably would want to rig some way to get audio
to both left and right channels, or you would only 'hear' it in one ear on your receiver.
Maybe some would want to feed audio from one rig into one side and another rig into
the other.. so you could keep track of which rig is which..

Anyway, enough thinking out loud. Sorry for the lenght of this note, but
I have to much time on my hands... due to a broken leg from a car wreck about
6 weeks ago. (I was in a car, not on my bike..)

Hi Arnie,
Thats all Im doing here also, thinking outloud.
The type riding I do is usually the 150 mile, 2 day charity rides around here. However, I am going to Austin this year for Ride for the Roses. But what I like to do is have everything contained in my rack pack and just throw it on and go. I have a harness that connects the radio to the bike so all I have to do is connect my headset to some sockets on the bike and I am good to go with a small coiled cord connecting me to the bike. I am pondering a way now to get rid of the cord and also allow me to hear and xmit while off thebike at the rest stops. I am usually monitoring the ham supported sag units, so it would be nice to be in constant contact.

Yah know... Ya'll got me thinking now. Anyone ever thought of modifying one of those Cell phone wireless headsets? Rig would have to be on VOX and you could mute the mike on the headset side..

I don't know if it could be made to work, but that's what comes to mind.

Zeb,
That is what got me to going on this too, the bluetooth technology wireless cell phone stuff.
What I can't seem to find though is the piece that would go at the radio (phone). I see the headsets but most are designed to use with phones that already have the BT technology built in. Surely there is an adapter to make the headset work with older phones.

Except it isn't legal (97.113e). That would be retransmitting from
the Citizen's Radio Service, which isn't allowed.

Bluetooth, and probably other Part 15 transmitters, should be legal.

Ahh. I see that now in the message history, must have missed that one.

I have seen them, either at the mall or at the Wireless USA store down the road. I'll have to take a look. I'm sure something in that area of technology could be improved to work.

Zeb,
That is what got me to going on this too, the bluetooth technology wireless cell phone stuff.
What I can't seem to find though is the piece that would go at the radio (phone). I see the headsets but most are designed to use with phones that already have the BT technology built in. Surely there is an adapter to make the headset work with older phones.
Jim

Zeb Palmer - KD7EVS <kd7evs@...> wrote:
Yah know... Ya'll got me thinking now. Anyone ever thought of modifying one of those Cell phone wireless headsets? Rig would have to be on VOX and you could mute the mike on the headset side..

I don't know if it could be made to work, but that's what comes to mind.

It's not exactly what the original question was about, but while riding in the Bike Ride Across Georgia (week long ride, ~450 miles), I have done the following:

In the rear rack bag, I use an Alinco DJ580 HT. It's an older radio, but will operate as a cross band repeater (CBR). A small 12 volt gel-cell will run it for many hours. I have a dual band half-wave J-pole antenna mounted on the back (attached to a fiberglass bike flag pole - minus the flag). That antenna gives me pretty good gain, yet doesn't require a ground plane.

When I park the bike, I enable the cross band repeat, using 5 watts on the 2 meter side, and very low power on the UHF side. That is all I need to reach the 100 yards or so to where I am, and keeps the heat down. I use a pocket sized HT (Yaesu VX-2) as the link between me and my bike.

This setup enables me to hit distant repeaters while relaxing at rest stops. A simple headset and finger-mounted PTT lets me transmit while pedaling (but I do get some wind noise). I can run the CBR setup even while pedaling, so there are no wires to unhook or settings to change when I get on or off the bike. I transmit using the tiny HT on my belt, which keys the "big" CBR radio in the rack bag.

Hi Everyone,

Just thinking out loud here, and thought I would throw out a

few ideas.
How about some sort of low power BC band FM wireless transmitter, and a FM receiver? (part 15?)
Of course this would only be the link from the bike to the rider and
you would have to either use a mic. or paddles separate from this set up.

Even so, you could monitor things while a short distance
away from the bike.. and if your receiver is on your belt
you would not
have to worry about ripping things up if you get off the
bike in a hurry.

Something like these transmitters -

sam.. I have done that a couple times at some places where our club was helping with comms at an event and it works well actually. I may work my way that direction also in the future. But this other stuff just popped in my head.
The only drawback with xbanding, and it isn't much of one, is you have to wait for the repeater to drop to xmit again; not a big deal. Also, Im pretty spoiled on my bar mounted ptt. As clumbsy as I am, I like my hands on the bars.
I did find this a few minutes ago, http://www.dongletooth.com/ might be getting closer.

The frequency doesn't matter, it's the theory that I was suggesting.
Here in the UK there might even be problems with bluetooth being
re-transmitted. I'd have to check the rules.

We could always use a very low powered ham band TXCVR for the link.
Certain bands allow for "remote control", one of these would be ideal.

It could be done, but as there would be little market for it I doubt
if anyone would make one commercially.

We know it can be done, it's just making it practical.

The Jabra FreeSpeak Bluetooth headset w/ 2.5mm adapter is one such:
http://reviews.cnet.com/4505-6448_7-20781380.html?tag=also
Kinda price at $115 but that includes both the Bluetooth headset and the adapter. You'd have to wire the 2.5mm plug over to the radio but that ought to be do-able.

Let us know if anyone tries it!

I emailed one manufacturer of this sort of stuff describing what I was looking for and explained that I thought there might be a market for it in the ham community. The answer I got back was short and sweet; We don't and won't make this sort of product.. but they thanked me for my interest...
Maybe I am weird, but I think you will probably see the day when this technology will even be built into ham equipment the same as it is now built into cell phones. I found online where Motorola is already building it into their commercial equipment.

909. Wireless headset - X-band repeater

Yahoo group: BMHA
Date: 2005-05-27 18:18:19 UTC
From: Arnie Grubbs
Topic: 909 Message: 909

Hi Sam,

I thought about doing the X-band repeater too. This would
work for radios that support X-band operation, and would
be fairly secure if using Tone squelch on the local (bike) link.

I have a Kenwood TH-78 that would work good for that if I could
get good battery's for it. Low power is like 15mW and high power
is several watts. I have a VX-2 with 2 spare battery's, which I
bought with the intention of being my VHF/UHF bike rig, which
would work for away from the bike use, but it would be back to
square one as far as a headset while riding goes.

The blue-tooth stuff looks interesting, and might work for short
rides (most seem to have a 3-4 hour talk time - rechargeable battery)
where you stay with in a short distance (30 yards?) of the bike.
If you are going out for a long ride, and you listen to HF or some busy repeaters, you
would be out of battery's quickly in a day or so.

I would think there would have to be something better. Guess its
time to do a little more thinking upon this.. And surfing the web a bit! :)

A quick note on batteries since it was mentioned. I am experimenting right now with a 12v pack I made out of AA cell nimh's I found at wallyworld for around 6$ for a 4 pack. They are Digital Concept brand and are 2200mah.. I have 10 in a case that came out of an old tempo vhf HT from many years ago. You can also buy a case that holds 10 in serial configuration. The weight is not much, just however much 10 AA cells weighs.
So far its working well. I ran it at the Tour de Cure and it held up nicely running both days on my Standard c168A on high power.

Yahoo group: BMHA
Date: 2005-05-27 22:47:23 UTC
From: Robert Nickels
Topic: 909 Message: 911

Bluetooth is a power hog, but it's designed to provide wide bandwidth for aps like audio and video while running off of a host devices power source (cell phone, pda, etc). Zigbee (802.15.4) devices are starting to appear but it's aimed at simple sensor and low bandwidth uses. I think we'll find lots of them in ham radio, but replacing the Bluetooth handset profile is probably not going to be one of them. If you'd like to learn more: http://www.palowireless.com/infotooth/tutorial/k6_hp.asp

Bluetooth adapters like the Jabra multi-adapter for non-Bluetooth phones or the Motorola DC600 are powered from the cell phone connector, and pick up audio from the 2.5mm plug. For radio use, we'd have to provide Audio In, Audio Out, and Power. It also acts as a charging station for the Bluetooth headset which is rated for 100 hours standby, 3 hours talk time. For about $35, I'm tempted to try it, since I'd like a Bluetooth headset for use with my Blackberry anyway.

But what we really need is for the next-gen FT-817 to have Bluetooth built-in. Yaesu, are you listening?

I emailed a manufacturer about looking into the ham radio market for blue tooth apps, they didn't want any of it. I got an answer back that said, we don't and won't have any projects like that. I think very soon most ham stuff will start being made bluetooth ready, just like the phones. The 30' range is plenty for most in shack operations. Now if they will look into incorporating ptt as well as vox.. hmmm
Maybe I will email kenwood next.. wait, Im a TN boy, I better start with Ten-Tec..

Howdy,

These S-band distances seem pretty optimistic. My bluetooth GPS
won't work with the receiver in a jersey back pocket (and the Palm on
the handlebars.) Perhaps the bluetooth wireless headset could be combined with
a GPS receiver to mount on top of a helmet...(!) <grin>

I use bluetooth in my motorhome for both GPS and e-mail/net access.

Most of the time when surfing the net, the phone is one end of the van
the the Palm T5 the other about 20 feet away. No problems at all.

The range on the bluteooth GPS is even better, well boyond the 10M
specified. The palm T5 seems to have great bluetooth range. My Palm
TT and my M500 were good (with a BT SD card) but not as good as the T5.

Bluetooth doesn't do obastacles very well though. If anything gets in
the way then distance fall quite sharply.

916. Bicycle Mobile fun

Yahoo group: BMHA
Date: 2005-05-30 02:52:08 UTC
From: ajspurr@cfu.net
Topic: 916 Message: 916

I had a wonderful time going HF bicycle mobile last evening with my Icom 703+ in northeast Iowa. I only started going bicycle mobile about 4 weeks ago and don't get out as much as I'd like because of work, kids, etc., but I've had a great time since starting.

I called CQ on 14.285 and, to my amazement, had a response. That's the first time someone has answered a CQ of mine when at 5 watts. I usually have to join a net or wait until a conversation is done to make a contact with someone since my signal is usually so weak it doesn't attract attention. During my 75 minute ride I talked with guys in Colorado, Vermont, New York, New Jersey, Texas and, most excitingly, Bolivia! That's my first DX contact while bicycle mobile. I had a hard time copying him, but copied him well enough.

The only bad thing about being bicycle mobile is not being able to easily log contacts. I've thought about getting a small recorder that I can clip to my belt and grab quickly to record contact info, but haven't really worked that out. It's not a huge deal to me. I mostly just want to have fun while hamming and logging seems secondary. But it would be nice. Any suggestions from anyone?

I was out of ham radio for about 10 years, and just got back into it about 4 months ago. I'm using a 20m Hamstick antenna mounted on my bicycle bag frame, and a Heil Traveler headseat with the PTT switch on the handlebars. My battery is homemade from 9 old NiCd's that weren't being used. The most challenging thing was figuring out how to mount the 703 remote head on the handlebars that was sturdy, but finally came upon using rubber-lined conduit guides.

I don't have any photos taken yet, but I've had several requests. When I take some I'll be sure to post them. There's nothing really fancy about my setup. I get lots of funny looks while biking, but that's part of the fun.

Aaron
N0MLZ

917. 2+6M antenna

Yahoo group: BMHA
Date: 2005-05-30 22:22:35 UTC
From: Darren
Topic: 917 Message: 917

I've just built myself a 5/8 2M antenna that is also a tuned 1/4 for 6M.

My normal bike antenna is a Watson W-770HB, this is a 1/2 wave on 2.
I would have expected the 5/8 to be better than the 1/2 wave, but it's
not, not by a big stick.

With my bike on its stand and the VX7 tuned to the local repeater, I
get full scale on the Watson but only about S7 on the new antenna.

Can anyone tell me why?
Is it just radiation angle or something else?

It's a real shame as we have a great 6M repeater not too far from here
and I'd like to be able to use it when out on my nightly ride.
If the new antenna is not as good as the old one on 2M, then it's not
worth using it. I never use 70CM, but 2m is always used.

Any ideas why a 1/2 wave is better than a 5/8 wave?

I'm just pleased that I never spent time finishing off the cosmetics
of the new antenna before I tested it :)

From: Sam Smith
Topic: 917 Message: 918

The 5/8 wave antenna requires a ground plane, something
difficult to achieve on a bike. The 1/2 wave does not
require one, so it is usually more efficient in situations
where there is no ground plane.

Subject: [BMHA] 2+6M antenna

I've just built myself a 5/8 2M antenna that is also a tuned
1/4 for 6M.

My normal bike antenna is a Watson W-770HB, this is a 1/2
wave on 2.
I would have expected the 5/8 to be better than the 1/2
wave, but it's
not, not by a big stick.

With my bike on its stand and the VX7 tuned to the local
repeater, I
get full scale on the Watson but only about S7 on the new
antenna.

Can anyone tell me why?
Is it just radiation angle or something else?

It's a real shame as we have a great 6M repeater not too far
from here
and I'd like to be able to use it when out on my nightly
ride.
If the new antenna is not as good as the old one on 2M, then
it's not
worth using it. I never use 70CM, but 2m is always used.

Any ideas why a 1/2 wave is better than a 5/8 wave?

I'm just pleased that I never spent time finishing off the
cosmetics
of the new antenna before I tested it :)

Darren,

A 1/2 wave antenna by its very nature is a ground independent antenna. 5/8 wave antennas require a ground plane. There is simply not enough horizontal metal mass on a bike to satisfy the ground plane requirement. This is also the reason that almost all marine VHF marine antennas are 1/2 wave or built upon 1/2 stub design as most boats are fiberglass or wood. I use a squatty body marine antenna on my bike. It works very well and has the advantage of being designed for harsh environments. Go to the files section in the BMHA yahoogroup and you can see pictures of my installation plus many other members bikes.

A small pocket-size tape recorder works nice for
mobile contacts--car and bike. Later they can be
moved into the official log.

Your rack looks familiar - are you using an Axiom rear rack? It looks like you mounted a mirror mount on one of the rack's rear tubes.
I'm using one on an Axiom Odysee rack, but mounted on the horizontal rear tube - had to use several wraps of rubber (old inner tube) as a shim and the mounting is not as study as I'd like it to be.

925. New Zealand from the bike!! N0LX/bm

Yahoo group: BMHA
Date: 2005-06-11 05:13:47 UTC
From: Jake
Topic: 925 Message: 925

Forgive the double posting to HFpack, but had to share my bicycle mobile story from this evening.

This evening I was testing out the bike mobile setup in preparation for the HFpack gathering at the Monument, Colorado hamfest. Said hello to Bonnie, KQ6XA on 20m, then QSY'ed down the band.

Had a nice hour-long roundtable (14.250MHz) going with stations in Michigan, 3 Californians, Washington and British Columbia. I eventually signed with all of them because it was dark and my wife thought I was only going around the block and was probably getting concerned.

Then I heard XE2FL calling me from Mexico. . . ok, my wife can wait a bit longer. . . . I was talking to Fernando when he reported that another station was trying to call me. It was ZL1AIX, Warren, in Aukland, New Zealand!! Now we had a 3-way going from Colorado, Mexico and NZ. He apologized for breaking in, but said he had to tell me I was an S-3 signal from my bicycle! What an evening to be on the radio!

I had my digital recorder with me and was able to get the audio with the XE2 and ZL1. I stuffed the recorder under the Heil headset. I was running 20 watts to a 13' short halfwave vertical.

My only regret was not being at 5 watts QRP for the New Zealand contact.

926. More wireless headset ponderings..

Yahoo group: BMHA
Date: 2005-06-12 01:00:21 UTC
From: Arnie Grubbs
Topic: 926 Message: 926

Hello people!

A short time ago several people on this list were discussing some
means of making up a wireless headset for use on the bike while in motion.
Some blue tooth devices were talked about...

So, while looking around the net I did find a few items for
wireless data coms on a website for experimenters/developers.

I thought that I would pass this along if anyone was interested in
playing around with making up a small controler to send the digitized
audio via blue tooth modules.

http://www.sparkfun.com/shop/index.php?shop=1&cart=290736&cat=62&

Arnie - KA0NCR

P.S.. kind of an interesting name for the website.. hope that it
don't apply to any projects a person might build! :)

Heres a thought, and its ok to laugh, It may not be real pretty, but how about a piece of heat shrink with the wire and a pipe cleaner up the middle. Then shrink it down. Of course, fixing it at the ends might be tricky.

From: Darren
Topic: 938 Message: 939

I mount my VX-7 by clipping it into an adapted mic holder.
I've bent the "forks" slightly to make it a tighter fit.
This mic holder is just cable tied to the handlebar upright.
The rig being in it's carry case adds to the security.

I don't know if the VX2 has the same button on the rear as the VX7
has, but if it does I recommend this easy fixing.

The only times the rig has come out of it's "holder" is on the couple
of occasions that me and my bike have parted company.
The rig stays in place no matter what surface I throw at it.

As for antenna mounts. I use a Watson W-770-HB dual bander on a
rightangled bracket that I fixed to the rear rack. Through this
bracket I drilled a 15mm hole and fitted a straight through SO-239
"coupler", making sure that there was a large washer to spread the
load either side of the plate.
The Watson screws directly into this 239 and the coax screws in the
bottom of it. This mount can easily be adapted for 3/8 mount HF
antennas thanks to an SO-239 to 3/8 adapter that are easily found at
rallies/hamfests etc.

I've put in maybe a thousand miles with this set up, with very few
problems other than connections working loose, and the occasional
problem with road grime.

> Walt kj5zf

Thanks Walt. I checked out the bag. It is a Topeak TC2228B, it looks just about the right size for the little VX-2R. But, trying to find one is another story. REI is supposed to carry it. There's a store near by, but none there, or any store in So. Cal. The wherehouse in WA has them, but date at the store is July 6. Shipping to me would cost $8, almost as much as the item at $12. Maybe Topeak will amswer my e-mail!

942. RE: [BMHA] Re: Newbie question

Yahoo group: BMHA
Date: 2005-06-22 01:21:48 UTC
From: Ted Burris
Topic: 938 Message: 942

Hi All,
I have been listening here for about a year but don't remember the last time I posted.
I don't know about the VX-2R, I could not find a picture of the back on the internet. but the VX-7 has a button on the back and a belt clip. I bought an extra belt clip and used a pipe clamp to hold it to the stem going out to the handle bars. If the VX2 is of similar config you could likely do the same. If its not I have VX150's that we do the same with except I jb welded a wing nut to the pipe clamp. We loosen, slide the integral clip into the pipe clamp and tighten just enough to hold solid but not enough to damage the clip. I have had one VX150 clip fail due to pot holes but after all I am in KS. I have one other thought for you. I haven't tried it with a radio but I have a set of Sony speakers on my "dash" on my bike that I slide in and out of an 8.88 Generic Walmart flip-phone cell phone holster. It works great for them and they make multiple sizes. A similar holster might fit your VX2. (Pictures of my rig are available on request.)

While I'm here, Has any body had any luck modifying a headset and remote PTT button to work with a VX7. and
I am considering adding about a 30 watt amp and 7AH Gell Cell to my rig. Any opinions on adding the amp vs. changing to a radio instead of the HT.
I have so much stiff on my "dash board" I dont thing I have room to go to a radio.

Have a great day.

Ted

> Walt kj5zf

Thanks Walt. I checked out the bag. It is a Topeak TC2228B, it looks just about the right size for the little VX-2R. But, trying to find one is another story. REI is supposed to carry it. There's a store near by, but none there, or any store in So. Cal. The wherehouse in WA has them, but date at the store is July 6. Shipping to me would cost $8, almost as much as the item at $12. Maybe Topeak will amswer my e-mail!

Which Topeak phone bag did you get? They have 2. One is called the Handy Phone Pack and the other is called Handy Phone pack Plus. The Plus is larger and has a 2nd zippered compartment for keys, etc.

Try Otto Engineering (www.ottoeng.com). The manufacture a lot of mic/ear phone products and may have something you can use.

The one I got has the extra compartment for keys, and actually my vx-5r will fit in either compartment. I got it at Bicycles Inc., so you may want to check their web site. Can't remember how much it was. Less than twenty bucks, maybe closer to 12.00 or 15.00.

946. Weather proof connector

Yahoo group: BMHA
Date: 2005-06-24 10:11:31 UTC
From: Jason Linz
Topic: 946 Message: 946

I hope this hasn't been asked before but, I have baught aa new bike not to long ago. I figured this time when I set it up I would put some radio equipment on it. After thinking a while about it I desided to get a cheap rack for behind the seat that mouts right on the seat post. I then took off the plastic part and got an ammo box from a local shop. So far I have prilled holes in the bottom to mount the box to the mettal part of the rack. The next think I want to do is find a weather proof connector to mount in the front of the box right behind the seat to connect a headset and GPS to the radios inside the box. I want to try to keep the box as water tight as I can to keep any radios inside dry incase I end up in the rain. I haven't realy been able to come up with what to use for the connector. I am wundering if anyone has any ideas. I guess it would be like a pannel mount 6 pin type connector.

I figure when I get that figured out I can look at finding a way to put an antenna somewhere that I won't hit it getting on the bike.

Thanks

Check Allied Electonics or Newark Electronics. They
both carry AMP CPC connectors which are available with
waterproof boots and o-ring seals. The more expensive
alternative is the Bendix connector which is the
military style of pin and socket connectors. These
are made by Amphenol. They are also available form
Newark and Allied. Check a local ARmy surplus
supplier too.

948. Bike Mobile Field Day and trip along C&O Canal

Yahoo group: BMHA
Date: 2005-06-25 02:39:20 UTC
From: BrassRat77
Topic: 948 Message: 948

Heading out tomorrow with my son's Scout troop to ride the C&O Canal towpath from Cumberland MD to Georgetown, DC (184 miles). Hope to operate Field Day "1B MD" QRP/battery from the towpath during rest stops and after we camp for the night. [although the ARRL propogation forcast indicates conditions may be challenging at 5W!] Operations will continue batteries permitting) thru mid-day Wednesday. I will probably hang out on the HFPack SSB calling frequencies on 17, 20, 40 or 60M and maybe try EastCars and the county hunter's net if I can figure out which county I'm in. Equipment is an FT-817, MP-1 with a flexible whip and the 12' MFJ telescoping whip, mounted on a hardtail MTB. Rig is sitting in a handlebar bag. Oh, I wish all the radio gear weighed less- about 10 pounds for the ham stuff and 20-25 for everything else (not including my share of the food). The other Scouters think I am NUTS.

IF I happen to work any BMHA'ers, QSL via home QTH. Report and hopefully pics when I get back.

From: Ron Baran
Topic: 949 Message: 949

Good evening all,

Got the bike all geared up, the shock absorbers oiled, the batteries all charged up, the keyer mounted and all ready to make some contacts and score some CW points.

Going 1C again this year with an 706MkIIG, AH-4 tuner and a 102" steel, spring mounted whip. Last year 162CW contacts, 78 miles, 606 points and 10th place. This year 250Qs, 100 miles, and 1000 points and 5th place.

It's going to be close to 100 degrees here tomorrow and if I don't put it out there I'll end up in the air conditioned family room watching the Cubs and Sox in the cross town series.

The bike is a Cannondale hybrid bike so I don't chafe those tender parts. Big cushy seat.

Just imagine the shame those weenies in their cars will feel when they realize they've been bested by a BMHA dude. Playing CW. On a moving bike. Dodging traffic. In the broiling Sun. WHAT? Am I nutz?

At the moment I am carbo loading on Guinness Beer. I believe there is a special elixir in the foam. Perhaps it's the carbos talking?

Now, don't we think there should be a special ARRL FD category for BM?

From: Barry Bogart
Topic: 950 Message: 950

I have never seen a seatpost rack that was much good.
They aren't rated for more than about 15 lbs and mine
has a tendancy to rotate around the seatpost, no
matter how tight.... So if your works out, let us know
which kind it is.

Knock 'em dead old friend.

Just picked up my new Sun recumbent yesterday. Got the necessary first-time dump outta the way this morning (only skinned shin)! Man, recumbents sure demand a whole new muscle group.

In keeping with BMHA the maiden cruise was made with the D7 and GPS working.

I considered taking the 817/Z11/Buddipole out for some FD Q's but, seeing as you've always been more nuts than I, I decided to let you fry your skull out there. I may make some 1C Q's in the air conditioned van while visiting local FD sites. Hope you do embarass the mobiles.

Hmmm- 91F and 45%humidity? Getting a bit toasty out there. Everything working fine. Ran into the AC after the first hour and a half. Fill up the water bottle, fillup the tummy and off again in a couple of minute. Up on 20Mtr cw. Seems like people like to all get on the same freq and call CQ - nobody makes any contacts but they feel busy.

AC van? Wassat? Get the recumbant out there and make some 1Cs the Big Boy way. If they can't hear you coming they will at least smell you coming. Wanna a battle ribbon bandage? Wonder how 75 is going to be tonight?

Am I rambling? Thought so. Must be time to get back out there.

Hey Lee,
The sprocket design is now fading from my shin on my lwb :0
You just can't turn an 8 foot bike on a dime :)
I am considering for the park trails around Ft Worth/Dallas, a swb uss like the ones from Action Bent for a bit more maneuverability. New muscle group, you got that right ,even the ones you land on as you look around to see if anyone saw you look like a dufus on the way to the ground. Ain't it great, just like when we were kids.
Of course then we didn't even know what a helmet was, but the word rasberries does come to mind.
Joe

Ya' know, I did feel just like a kid when I went down......though I wasn't 54 then, and wasn't 275 pounds. All the more spectacular at a busy intersection! Was actually on the sidewalk and hit an "after-thought" section of trail with a sharp s-turn avoiding light poles at the intersection. Perfect set of skid marks from me pushing the front wheel sideways. It was comforting that only three vehicles passed me in the busy intersection before someone asked if I was OK.

I looked at the Action bikes and decided to stay with the LWB for now. I may try to build a SWB this winter since I bought the LWB I had plans to build.

I was able to mount my old rear rack, cooler, and hang the pack from the seat back. The 817 pack should mount nicely as well though I dunno if I need to worry about too much rear weight making the front end too light. I won't mount that until I have more experience with the bike.

Hey Len,
Know what you mean about those "afterthought" sections. They don't bother me as much as dodging broken beer bottles. On the plus side, I worked a bike event in Richardson, Tx. this year and rode in a SAG as one of the communication team. The SAG was from Richardson BikeMart and the driver was one of BikeMart's mechanics. It was great, I learned from watching a "master" at work on flats on the road. Man, such a bargain! And he didn't use any tire tools on quick disconnect tires, and had a homebuilt air tank he had converted from one of his old scuba tanks. You couldn't pay to get a better tire clinic :)
My next project is gong to be a trike, I will most likely use a lot of the stuff off my homebuilt lwb. You can get some great ideas off this guys home page in Canada
(http://bikes.jkcc.com/).
I also like the idea of Powder Coating instead of "rattle cans" if I like the finished product.
We are fortunate in the DFW area to have several Powder Coaters, so you can actually drop off your parts. You can do it like I was trained to do small print jobs. Just let the shop add your parts to another big job that has room left on the rack. It's good for us both.
Anyway just a few thoughts on future projects.
By the way, I'll be 58 in Dec. yikes! So riding is my way of working off daily frustrations and weight. I'm holding my own at around 210 on my 5'7", can't do as much as I used to but still having fun :)

Thanks for the insight, Joe. I'll check out that page as it looks like a lot of good info.

Part of my warped thinking included the idea that if I paid the price of a bent bike, I'll ride it to get my monies' worth and loose weight. In any case the XYL will make me get my monies' worth.

G'Day All,

Nothing like a good night's sleep to get you feeling perky after a long stint on FD. Did you notice how EVERYTHING sounds like CW for a few hours after?

Time to eat some Major Crow. My pre-FD predictions were 250Qs on CW, 100 miles on the bike, and 1000 points. What was I thinking?

Final total was 206 CW Qs, 77.23 miles on the bike, and 974 points (forgot about all those bogus bonus points).

All the Qs were while in motion and the motion lasted for 9h 28m, for an average of 8.1MPH. It's an Old Fart version of "I can beetchewup with one hand behind my back." No, Martha, we never grow up.

Close to 1000 points ought to put a BMHA dude right near the top of the 1C class. Do you suppose all those guys sitting in their air conditioned cars will feel shame?

Hope all are healing nicely from their FD activities.

73,

Ron W9XS

960. SWB for trails FTW/Dallas

Yahoo group: BMHA
Date: 2005-06-27 16:40:20 UTC
From: Redding, Walt
Topic: 960 Message: 960

Joe, if you'd like to take my v-rex for a spin, I'd be happy to let you. It's not uss but it would give you a feel for a SWB. Some of the sharp turns for the low water crossings at the Trinity are a little tricky, but if I take it easy It's ok. Even the gravel trails weren't a problem when I had wide tires on it. But I've changed to skinny ones so I don't get on the gravel much if I can help it.

961. Re: seatpost rack

Yahoo group: BMHA
Date: 2005-07-05 10:03:38 UTC
From: Jason Linz
Topic: 950 Message: 961

The one I am using is I think a Bell from Kmart. It was the only one I could find. It says on it not for waight of more then 20lb. As far as I can figure it will be enuff for me. To much waight will show me down and make it so I can't put the bike away. I have had some trouble with it turning but only when it tips over on the grass.

I got a antenna mount for an NMO mount that I used to put on vans allong the front pannel. I drilled out a hole to fit the rear axel. I hope to mount a non ground plane NMO antenna soon. I hope it will give me more range then the HT antenna hooked to my side.

The big thing I am worried about is keeping it from getting to heavy and beeing able to ride it as out of shape as I am.

HAM it up

From: Bud Talbot
Topic: 784 Message: 962

Greetings-

my name is Bud, and I am a new member of the BMHA yahoo group. I live in Louisville, CO (near Boulder) and am a ham and cyclist. I'm into APRS (I have a 24/7 APRS/WX station at home, and APRS mobile), portable HF (HFPack) and ARMY MARS (I am the CO Assistant State Director).

I have fooled around with bicycle mobile APRS before on my mountain bike, but I've recently gotten into road biking and would like to do some hamming from the saddle. My wife and I did Ride the Rockies this year and I sure wish I had the HT with me.

ANyway, just thought I'd say hey and look forward to interacting with the group.

Hello, I'm new to the group. I'm not a ham, but the group description said it wasn't required, so I hope I'll be welcome here.

My husband's a stronger cyclist than I am, and he frequently gets ahead of me, and out of sight. We decided to get some two-way radios with voice-activated headsets that we could wear under our helmets, but have been having several problems. Mainly, we lose contact within a few blocks, even though the radios are rated for 5-8 miles. Also, our breathing activates the microphone almost constantly. We tried adjusting the sensitivity and putting little foam windscreens on the mics, but it didn't seem to help. Any suggestions?

Hello and welcome,
I imagine you are talking about the UHF FRS/GMRS radios. They work pretty well, but those milage ratings are under almost line of sight conditions and if you run them at their highest power setting, which reguires the GMRS license. If your radio headset has a push to talk switch, I would recommend using that instead of the voice operated keying. That would solve the wind noise problem, but it does require you to take your hand off the handle bars unless you can rig it up some how to keep the button in your hand or attached to the bars. Also, if you are wearing the radio on your belt and the antenna is right up against your body, that will cut your distance down quite a bit. Try coming up with a way to mount the radio somewhere else, maybe on the handle bars or rig up a way to carry it at a different place on your body that gets the antenna in the clear.
Hope this helps some.
Jim

Those sound like FRS radios. These have limitations. The "range" given is under ideal conditions ... open, flat ground or hilltop to hilltop. Then also, if you have these clipped to your body .. your body will absorb some of the RF energy and further reduce your range.

As far as the use of VOX (voice activation) on a bike ... I've never found it practical.

You could try GMRS radios. They have more power but you'll still have to deal with the antenna close to your body issue and figure out some way to safely activate the PTT (push to talk) switch.

Another alternative is MURS radios. These are license free, have more power than FRS, but have the ability to use removable (external) antennas. So you could mound a larger antenna directly on the bike and get it away from your body. However, there are few models of radios sold new for this service these days. There are some "commercial" radios that will qualify, but these are (mostly) ridiculously expensive. The DAKOTA ALERT radios are, as far as I know, the only 'new' MURS radios now currently offered for sale.

OR .... (since most of us here are ham radio operators) .. you both can get your ham radio licenses and they you can use ham radios.

Jim,

Thanks for your help. Yes, that is the kind of radio we have. We were wearing them in our jersey pockets. I didn't know about the antenna being muted. I'll have to figure out a way to mount them. The headset doesn't have a push-to-talk switch. Do they make them that way?

Richard,

Thanks for your help. I'm not familiar with MURS radios. We have four of these FMS/GMRS radios, (two VOX/PTT and two PTT only), and we were hoping that as cheap as they were (and easily accessible), maybe they'd catch on with other cyclists if there was a practical way to use them. We saw several other couples using them on a recent trip, but didn't have a chance to ask them if they were having any success. On the way home, we noticed several motorcyclists with what appeared to be VOX headsets under their helmets. If they can find a way to beat the wind, I figured surely I could, too.

As for getting a ham license, I may do that. However, if it's possible, I'd still like to find a way to make the cheap radios work as a viable way for cyclists to communicate within a riding group.

Hi September,

Have you two considered owning a tandem bike? If you did that he would never get out of sight. You can't imagine the added pleasure a tandem provides over two seperate bikes.

If you'd like to pursue this idea I can provide you with a tandem forum.

Let me know.

Scott,

Actually, yes, we want to get a tandem. We'd like to find a recumbent that will fit a 6'6" captain and a 5'7" stoker. Our LBS dealer said my husband's too tall for a recumbent tandem. I'm hoping he's wrong.

Welcome to the gang September! Say have you looked into the
(rbent@yahoogroups.com)
for tandem recumbent info? They might be able to answer some of your
questions on the tandem. Good luck on the radio situation, I am one of
the local VE's and course instructors for the amateur Tech. license in
Irving, Texas, I promise you the Tech ticket is easy to obtain with a
little study on your part, you'll be talking on ham radio in no time and
there are lots of radios a very low cost with max results. You wouldn't
be disappointed in your efforts I promise you that.
Good luck to you which ever way you decide to go.
Ride Safe,
Joe/Ft.Worth

Greetings, Bud.

Well, it looks like we're neighbors and both HFpacker's, too. I live in Golden, CO.

I fooled around with VHF/bm as a way to pass the time on my rides to work, but at 5:30 a.m. there's no one to talk to. Then, by 6:30 p.m. on the way home, everyone else is already destinated and eating dinner:-)

For me, the best way to do bike mobile is HF. I run either an FT-817 or my IC-706 with the control head mounted on the handlebars, using 17 or 20 meters.

A few weeks ago I was riding north of town and was talking to a guy in Mexico on 20 m (20 watts), when a ZL1 broke in from Auckland, New Zealand! I had a digital voice recorder running as my log book and captured the contact. Here's a link to the audio and photo:
http://hometown.aol.com/n0lx2/zl1aix.html

And here's the setup with the 817:
http://hometown.aol.com/n0lx/bikemobile.html

I also ran APRS for a while. It was fun to have someone across the continent look up my webpage and see my location and speed in real-time.

73,
Jake

Scott 'n Barb (somewhere in TX!)

Contact Bike Friday in Eugene, OR; they do build a
'bent 2-seater; most
of
their tandems are really built to size, although they
don't advertise
them
as 'custom'.
Hans Scholz is one of the owners and quite innovative.
Hope this is of some help.

Pedal on TWOgether!
Rudy & Kay/zonatandem

I personally know Hans. He's a very busy person, and
he may be a week getting back to you, but keep trying
and just remember the squeaky wheel gets the grease.
Use our names, Scott and Barb Laughlin.

I know he's trying to suspend his recumbent business,
but lean on him, tell him he can quit after he
finishes your bike.

They built both a Tandem Two'sDay and a New World
Tourist for us. They aren't cheap.

The phone number is 800-777-0258
Website is www.bikefriday.com

There is yet another source, maybe: The Eugene
Bicycle Works, 541-686-9885, www.efn.org/~CAT
Jan (pronounced Yawn) is the person in charge, and
even harder to reach than Hans.

I hope this helps.

Best regards,
ScottnBarb

I got a tandem last year for me and teh YL. We do ultras and long-distance tours. We have 8 other bikes but never touch the singles anymore. I HIGHLY recommend them. If your partner is already putting up with your radio hobby, your relationship is probably solid enough for tandeming!

QSO's should be a natural for the stoker, but she doesn't have her license (yet). We are the same size, so she could captain (if I lost 10 lbs of fat and she gained the same in muscle!). But I'd me the control operator anyway, I guess. I have an IC-703 and a Comet UHV-6 - I'll have to try it!

From: scott laughlin
Topic: 981 Message: 983

Hi,

We have a new member who is trying to make their new
family type radios work like they thought they should.
I suggested she should consider a tandem. And now
they are.

Barb and I bought our first tandem in 1995. It solved
a lot of energy problems for us, plus it strengthened
our union of 33 years, then.

Barb's a ham, too. Her call is KC7BSY. We're both in
Texas, even though QRZ doesn't show that.

Seven bikes? We have two. A Burley and a Bike Friday
New World Tourist. Summer before last Barb drove
support for me while I pedaled from Yuma to El Paso,
following along the Mexico border as much as we could,
using simplex 146.52 to ride herd on each other. It
was fun, but not nearly as much fun as having her with
me. She injured her knee three years ago, and it's
been awhile in healing. We're just now getting back
in the swing of it

So what kind of tandem do you have? What is your
highest adventure to date? One of our best was
cycling from Williams, AZ to Grand Canyon, and back.

72,

Scott, n7net

September,

Welcome!

Your experience with those radios is not all that uncommon. My guess is that those are FRS Radios (Channels 1-14/no license required 0.5 watts of power) with GMRS (Channels 15-22/License required $75.00 and power unknown for your radios) Mileage figures on those radios are based on a perfect scenario of no interference by other devices and Line of sight operation. Line of sight operation is defined as the two radios having a clear space 1 meter radius from the antenna, elevated above the terrain, and no obstructions between the two radios. This is a predictable standard but very unrealistic. When you place the radio on your belt or camelback water pack, your body or pack absorbs the energy from the antenna which significantly reduces your range. Putting it in your pocket is very bad. This is why most of us have antennas on our bikes. Now you can't put a different antenna on your radios but if you can position them so the antenna is not against anything, you might get out to a mile. Voice activation just does not work on a bike for all the reasons you have observed. You need to use the push-to-talk switch.

The Technician Class Ham radio license is very attainable with minor study. The radios are many times more powerful with a variety of antenna options thereby increasing your distance. I would suggest that you hook up with a local ham club and get licensed. This is the only radio license you can't buy, you have to earn it. Testing these days I think is about $12.00 and the license is good for 10 years with free 10 year renewals. There are radio hams all over the world and it goes really good with bike riding. Check out the files section for pictures of members bikes with antennas. With the antenna on my bike I easily get 10 miles point to point with my handheld radio and many times more using an extending device called a repeater. Repeaters are typically supported and maintained by local ham radio clubs for the use of all ham radio operators. Go to www.arrl.org and click on the clubs link just below the big red ARRL in the upper left corner to find a club near you.

September,

The motorcyclists probably had PTT buttons on the handlebars. There are radios made for motorcycles with headsets and remote PTT.

When I ride with others I put my FRS radio on the shoulder strap for my Camelbak. This keeps it close to my ear and makes it easy to use by simply turning my head, reaching up to push the PTT, and speaking. This does require yo to take one hand off the handlebar, but you should stop if you need to have a long conversation, anyway. We just use the radios to in case we need to sop or have a problem.

Be aware that the interference eliminator codes for different brands of radios are not necessarilly compatible. Cobras, Midlands, and Motorla Talkabouts use the same tones for the same number. I don't have any information about the Uniden.

If you use channels 1-7 with radios that are GMRS/FRS rather than just FRS you should technicall have a GMRS license. Those channels are in both services and GMRS licensees can use higher poser than unlicensed FRS operators. The dual GMRS/FRS handehelds usually transmit at a higher power on channels 1-7 whic makes it illeagle for an unlicensed operator to use those channels. The instructions don't cover this very well. I believe a GMRS license is around $70 for 5 years. No test required. Covers the immediate family living at home. Look at http://wireless.fcc.gov/services/personal/ for more information on different personal radio services.

The tandem idea is a good one. My wife and I keep talking about a tandem. She likes a recumbent (although she doesn't have one yet) and I like a standard bike. There is a company in Germany that makes a hybrid tandem with a recumbent infront of a standard bike. The captain sits in back with this bike. You both can see where you are going. I don't remember the name of the compant, but you can probably find it by doing a search for recumbent tandem.

Seriously consider getting a Technician class amateur license. You will be happy with what you can do with it.

Good luck.

Kevin,

Thanks for the additional information about the FMR/GMRS radios, and the tips, too. I just may take everyone up on that suggestion for getting a ham license. My father-in-law is a ham, and my husband grew up around it, but never really had an interest in it. I'm a nurse and started listening to scanners once I learned that I could get a head's-up from the ambulances before they called the ER. Now that the emergency frequencies are scrambled, it's not much fun to listen anymore, unless I can catch the storm-chasers on their hams. When I did travel nursing about ten years ago, I used to take a CB with me, but I hardly ever talked. It was just something nice to have in an emergency, or if I needed directions. Some of the truckers made me uncomfortable, so I didn't talk unless I really needed to. That was before I had a cell phone. I entertained the idea of getting a ham license back then, but hubby wasn't crazy with the idea of constructing another tower, like he'd done for his dad, especially when he nearly fell from the top. It was an 85 ft tower, and they were guying it off during a storm, and they were straightening it up with a fence jack. The guy wire came loose, and he was suddenly hanging on with one hand. Jump forward a few years, now he's married to me, and I mentioned an interest in hams. Needless to say, he wasn't too thrilled with the idea, especially when he thought it was just a passing fancy on my part. He's more open to the idea now that he sees I really do enjoy radios of all sorts, whether it's listening, talking, or just reading about them.

Your welcome! Glad you liked the pictures and as you could see by my old blue Fuji 10-speed, some of us still don't follow the trends. I wish more of the members would post picture of their bikes. By the way, interesting story about your husband and Father-in-law. In Ham radio you never need a tower; it's a luxury not a necessity and that is only for the esoteric geeked out hams that chase countries, counties, and grids. I can say that as I am one of those and even I don't have a tower. 99.9% percent of the stuff that your Father-in-law did years ago can be accomplished with thin wire antennas between a tree and the house. He was just a little more driven for that competitive edge (this is where the like father like son thing comes in, it's just that son does it on a bike). What your Father-in-law did was HF (around the world stuff). What you will start out in that we have been discussing here is VHF/UHF FM (typical 30 mile max for your purposes) and no big antennas or towers and no morse code needed (I am simplifying this greatly as there is much diversity and much that can be learned and done in this hobby).

Good luck and happy trails,

Earl,

You hit the nail on the head about my FIL and my husband. My FIL doesn't use a tower anymore; he's got a two-meter rig now.

Question. Do most of you guys have a separate bike for your rigs, or do you move it from bike to bike?

September

Evidently whomever has suggested this new proposal has
not tried to find a place to squeeze in on 20 or 40
when conditions are good.

It's going to be hard to work qrp with a lid and a
linear on the band.

I wonder where this is leading?

Jim, you do present a good argument.

I have a friend, Johnny, WB7???, a long haul truck driver and does CW in the run. He has a pair of micro switches plugged into a keyer. The switches are glued into a strip of velcro that fits onto his shifting hand. He's much faster than I am

I use an old Navy handpump and a Vibroplex Standard. The lower the power goes the slower one has to send. At least that's my feeling.

I haven't done any CW from the bike. It's all been two-meters and 440.

Two years ago I pedaled from Yuma to El Paso while Barb supported me with our pickup camper and we used 146.52 simplex. We stayed close to border most of the time. It was great fun.

Thanks for the shout.

Best regards,
ScottnBarb

==========

Hi Jim,

I'm of two minds on this issue - and, I'm one of those guys with the paddle on the handlebars.

For some people the new language of Morse Code comes easy and for others it is difficult. I learned code as a 14 year old and everyone in our group passed the Novice code at 25 WPM. During home room someone would pound on the J38 as fast as their little wrist would go and the rest of us would run back and forth along the blackboard as fast as we could. (Yes, actually BLACKboards)

OTHO, I'm had occasion to teach code classes only to find some highly motivated people who were - if there is such a thing - auditorially dyslexic. We finally got to the point with one guy where we sat him down and told him to send back to me exactly what he heard me send. I'd send "a" and he'd send back dah-dit, and so on.

One advantage of the novice is that it was a time when you were assimilated into the fraternity. Some would correct you on procedure and, being an open minded newcomer, you'd learn.

Now I hear a lot of folks on HF who have no clue on how to operate. They don't identify appropriately, they stop talking in the middle of a sentence and assume you're going to know they stopped and not possibly think of QSB. Many of them sport older 1X3 calls so I assume they've been around for a while. Hint, there are no squelch tails on HF SSB.

On occasion I've tried to be subtle and mention that "over" can be a useful word during marginal conditions only to be met with hostility. We've seen what happens to a society when you lower the bar. It's happening to ham radio.

One of my favoirte situations is when you hear somebody idently both stations in the QSO and you can't tell if they say their call first or last.

I propose that we have a National Ham Radio Help a Nitwit Week. All of us old timers could harass the nitwits by interspercing our voice transmissions with insulting comments in morse code. Only thing left is to settle on a week - or perhaps a month?

I'm not real sure what the answer is. Its a topic thats been discussed and cussed for years now. Not to sound like an elitest, but I like being one of the folks who can do it (even though I don't do it well) and I still think there should be something we can call our own. I'm sure there are still some experimentors out there, but they are getting harder to find, my gut tells me that cw ops will eventually get hard to find too. I like that we have an oddball, unique requirement to having a Ham license.
Does anyone think that manufacturers would stop including the mode in their equipment designs if it were no longer required? I think they would take it out. Hopefully I'm wrong about that.
Maybe the answer is that it becomes an endorsement on any class license? I don't like that idea, but at least it wouldn't die.
I've been called a dinosaur before, but I even miss the days when you got a WN call sign for getting your novice ticket.

September,

While I can't speak for others, I have one road bike (That old blue Fuji 10speed with the antenna on the bike rack that you saw under the N0HZ files) with a Radio Shack FRS radio holder that I put my handheld into. I occasionally nick my son's mountain bike that I also have a holder on and move my haldheld to it. I use a handheld because they tend to be easy on batteries and put out about 2 Watts. That into an external antenna works very well. Other's on this forum have mounted mobile car radios and carry a 7 or 10 amp/hour battery so they can get that 25 or 45 watts when they need it. The mobiles with removable heads are most popular as they can put the radio body and battery in a top mount bike rack bag on the rear and the head on the bars. I don't find that I need that as I live in the Mpls, MN area and I can always find a repeater anywhere in MN. If I was going coast to coast I might do something with more power. I guess the point is that you indentify your needs based on your use. That is why there is such a variety of installations in the pictures area.

BTW, have you noticed that ham radio operators collect everything?

Earl

I've been a CW operator (as well as other modes) for almost 50 years. I learned it in the Army a long time ago but to be honest I still sweat it . Today when we can hear computer operated code it is a marvel to listen to . Using CW as a digital orcomputerised means of communications sbhould ensure CW's continued use for years to come. Not surprisingly when you listen to computer CW and see it print on the screen your ability to read increases in speed by quite a large amount. You hear the sound and your mind "reads" the sound before it is even printed out.

998. Conversational CW

Yahoo group: BMHA
Date: 2005-07-23 13:38:38 UTC
From: scott laughlin
Topic: 998 Message: 998

Hey!

Those interested in honing their CW skills might want
to contact Nancy, WZ8C, through FISTS <www.fists.org>
and learn about the novels that will soon be available
on CD. Right now I think *Dorothy and the Wizard of
OZ* is available at 25 and 30 wpm.

Back in the '80s a World War II veteran told war
stories on 40 meters. he sent just a bit faster than
i could copy. So I ended up catching about every
third word and trying to anagram them together. An
interesting phrase I recall was when the sea came over
the deck and took out the pilot house windows. I
missed a bunch right after that and I still wonder
what happened.

I was as faithful to that guy as I was to the Cinnamon
Bear as a kid. Only serious stuff kept me away from
the radio.

His transmissions were a factor in my gaining 13 wpm
and earning my General.

From: n7net
Topic: 999 Message: 999

He all,

I have a MFJ 20-meter stick, and i want to mount it on a bike trailer this spring for operation with my MFJ-9420. Can someone help with a simple 20-meter tuner that might fit in a small space? I doubt the power would ever exceed 15-watts.

Thanks for any help that might be available.

You'd have to check with Mike (NF0N, treasurer) for an official answer, but the practical answer is that everyone is paid up and will stay that way for awhile.

Since we lost our Newsletter editor the club hasn't had many expenses (nor provided much value) except for the website -- which I host most of as my contribution to the BMHA. Once activity picks up (or for some unknown-at-this-time the club needs money, I would expect membership dues activity to pick up again. Until then, everyone can hang loose.

As for an exact answer to the question, I do have a database which shows dues activity (Mike sends them to me for logging once he does his treasurer-things) but this information is not available on the website. It would be very easy for me to make it available, but it feels too much of a privacy issue to me.

Skip is correct. Those BMHA members who have paid dues are still members. Since we have not had an official newsletter in some time, we have essentially stopped the clock. Once a newsletter is re-started, hopefully soon, either a ezine or email newsletter, the clock will start again. Until then, don't worry about your membership expiring, it will continue. Fortunately Hartley, NA0A left the treasuery in good shape and we have kept it in good shape.

Thanks Skip,

I appreciate your quick response.

BMHA is home to some of the most skilled hams I've ever come across.

I have a suggestion: Why can't an electronic newsletter be generated using Power Point (I use that name because it's the only one of which I'm familiar).

Two of us, perhaps even three of four, over-the-hill guys--17-year-olds--trapped in decaying bodies, are planning a Southern Tier bike trip from San Diego to St. Augustine come early spring. If it does, indeed, come to pass I'll be feeding a journal into the website via my pocketmail device, and some 20-meter cw, if I can ever shrink everything a bit smaller.

I've been talkin' this talk for so many years. It's time to git gittin' :-). I keep you abreast with the plans.

1006. RAGBRAI Photo of Greenspeed trike uploaded

Yahoo group: BMHA
Date: 2005-08-03 23:44:53 UTC
From: nf0n
Topic: 1006 Message: 1006

I have posted a picture of the Greenspeed GT3 trike I rode on RAGBRAI (Bike ride across Iowa). I actually borrowed it from a co-worker who is also a Ham. You will notice the duoband antenna on the rear which is doing service as a flag bearer. Our team, Team Megacycles is composed of mostly Hams and we use 2 meters to communicate to our halfway point SAG vehicle and to locate the campsite at the end town for the day's ride. RAGBRAI is seven days long and is the largest organized state ride in the USA. 10000+ riders plus support people do the ride from the West edge to the Ease edge of Iowa.

Since the trike experience was great and whetted my appetite to get one myself, I envision all kinds of Ham things I can do with a trike. I will post as my dream becomes reality. Trikes are not cheap and I hope to choose one carefully.

Joe,

Perhaps the light has been left on by others, as well, and bicycle mobiling will carry on for many years to come, according this brought forward from the bike league:

August 1 , 2005

$3 Billion Guaranteed for Biking in Final Bill
The new Transportation Bill, H.R. 3 SAFETEA-LU, almost doubles the amount available for bicyclists and pedestrians from the previous bill, guaranteeing at least $3 billion will be spent on bicycle programs through 2009. The bill creates a new Safe Routes to School program, with $612 million allocated for the program over the next 5 years. To learn more about the bill, and for updated analysis, visit www.bikeleague.org.

1009. Dues? What Dues?

Yahoo group: BMHA
Date: 2005-08-06 13:39:08 UTC
From: slafetra
Topic: 1009 Message: 1009

Just to be clear in response to Jim's post.
1) There are no dues to participate in this Yahoo!group.

2) There is a separate group (the BMHA -- Bicycle Mobile Hams of America) which has had dues (typically $10/year) and has published a quarterly newsletter until a couple of years ago when its founder (Hartley NA0A) passed away.

The BMHA website welcomes visitors and you can find (in reduced format, but still readable) the back issues and index of articles in the newsletter.

So, to allay any fears -- there are no "dues" associated with this Yahoo!group.

And please visit us on the BMHA website at
http://www.LaFetra.com/BMHA

Do you have a rear rack? The easiest thing to do is to mount it to that somehow. If you don't carry anything on the rack, you can drill/punch/whatever a hole in it that's big enough for an antenna mount and mount it that way. If not, then I don't know...I've got a road bike with no rack and right now I've relegated myself to carrying a HT in the back of my jersey and wearing a headset.

Ryan,

You didn't mention whether you wanted to mount an HF or VHF antenna.

Here is my original setup with a FT-817 and a big 13-foot antenna for HF. It shows the PVC bracket I attached to the rack as a support:
http://hometown.aol.com/n0lx/bikemobile.html

At one point I wanted to try my hand at VHF, so I built a 2-meter, colinear J-pole. I live between the base of the Rocky Mountains to the west and two flat top mts to the east that shadow my signal both simplex and through repeaters. I needed something with gain:
http://hometown.aol.com/n0lx/vhfbike.html

Note: I have the PVC riser tilted back about 30 degrees to keep the big HF antenna from exceeding the legal street limit, but you could turn it vertical to prevent slight cross-polarization. You could also use it to mount a 2m 1/4-wave groundplane antenna with 3 sloping radials up nice and high with a longer riser. It would then be independent of the bike metal as a ground!

Here's one more shot: I mounted the 706 on the rack with the control head on the bars. There's also a 17AH battery inside the bag with the 706. This was the setup I used to work New Zealand with 20 watts back in June.

Topic: 1010 Message: 1014

I've used a fiberglass "bike flag" pole attached to the rear wheel and rack. To that, I attach a 2-meter or dual-band roll-up J-Pole antenna (better gain than a quarter wave, and doesn't need a ground plane). Works really well, but the setup does have a little bit of sway. To reduce that, I use a short piece of fishing line between the seat and the pole.

Sam

1018. Re: [BMHA] More wireless headset ponderings..

Yahoo group: BMHA
Date: 2005-08-16 03:37:38 UTC
From: Harry G. Seyfert
Topic: 926 Message: 1018

Hello,
I don't know if this issue was ever resolved with a "best of show" design, but here is another idea. It does require that the ham be an electronics person who enjoys the smell of rosin flux soldering. Recently, at a local garage sale, I found the following 2 items: one 900 MHz cordless phone and one VHS cam-corder, for $1 each. Basically, we have a full-duplex repeater system and a 9.6V / 2.1 AH battery and charger (cam-corder didn't work, battery and charger did). The base unit of the phone operates at 9 VDC at less than 300 mA. The handset uses 3.6 VDC at much less than 300 mA. There is some circuitry that will not be used, and some experimentation will be needed to make the interface to the H/T (PTT, audio levels) and how to modify the handset electronics to get just what you need / want. The 9.6V / 2.1 AH battery will power the base radio for over 7 hours of continuous talk time!. The range from the base phone radio to the handset should be far greater than one would want to be separated from his bike! The cordless phone electronics also provides digital security of the transmissions. My H/T is a Yaesu VX-5. I plan on using a Plantronics boom-mic / earphone. This will be a winter project. Hope to have some results to post!

73,
Harry, WD9FYF

Subject: [BMHA] More wireless headset ponderings..

Hello people!

A short time ago several people on this list were discussing some
means of making up a wireless headset for use on the bike while in motion.
Some blue tooth devices were talked about...

So, while looking around the net I did find a few items for
wireless data coms on a website for experimenters/developers.

I thought that I would pass this along if anyone was interested in
playing around with making up a small controler to send the digitized
audio via blue tooth modules.

1020. Re: [BMHA] More wireless headset ponderings..

Yahoo group: BMHA
Date: 2005-08-17 03:11:13 UTC
From: Harry G. Seyfert
Topic: 926 Message: 1020

Hello Eric,

If you look at any telephone circuit, you have audio in (microphone) and audio out (earphone). The H/T also has the same signals plus PTT. This last one could be our frustration! VOX could be used, but other members have mentioned the wind noise, breathing, etc. causing false keying, so some other technique must be devised.

I envision using the base transmitter / receiver module to interface to the H/T and then use the handset transmitter / receiver connected to the Plantronics mic / earphone set with the phone radio circuit in a small belt-mounted case, along with the cordless phone battery. The base unit can be powered by the 2.1 AH camcorder battery. The base unit has a "Page" button. Too bad it isn't on the handset. Perhaps it could be used to activate the PTT.

Since so far, I only have $2 invested, I think I can come up with something that will work. I already reaped a 52mm photographic filter from the camcorder that will work very nicely on my Canon digital camera, so my investment has already paid for itself!

The radio unit inside the base unit has 12 leads coming out of it. I need to study the circuit board a bit in attempt to figure out the signals, power, etc. Then, the same will need be done with the handset. My phone is a GE model 2-6920B.

I am in the process of moving, so I figure this project will find some time long about winter, when cycling is only a wish and a dream. But, having all the goodies available means I can experiment and test without even coming close to my bike. How about this -- operating your base radio from your deck or patio and not having to drag along coaxes and power cords!

If you are interested, I'll keep you posted of my progress and stumbling.

73,
Harry G. Seyfert, WD9FYF

From: September Brown
Topic: 926 Message: 1021

Sounds very interesting. I'd like to hear how your progress is going. I think I'm the one who brought up the original question. I had asked about problems with using our Cobra or Uniden two-way radios on our bikes. My husband tends to get blocks or miles ahead of me, and we wanted a way to communicate with each other that was easier and safer than operating a cell phone. Several group members encouraged us to take up Ham and/or get a tandem.

As an update, my husband, whose dad is a Ham, was agreeable to both ideas. We rented a tandem a couple of weeks ago, and both enjoyed ourselves. We agreed it would take some practice to get the teamwork down, but we were really doing well getting a predictable communication system going.

Incidentally, a few days later, we were out riding with a group, and he got way ahead of me. He was at the front of the group, and I was near the back. I suddenly had an allergic reaction to something, I don't know what, and developed a rash and began having trouble breathing. My throat began to swell, and I started wheezing. Some people who were riding near me stopped to help, and fortunately, someone had some benadryl, which stopped the reaction. I had accidentally left my cell phone in the car, but another person called my husband, who didn't stop to answer his cell phone until he got to the bottom of a long hill he was descending. When he learned I was having trouble, he had to turn around and go back up that hill, and make his way back more than two miles to where I was on the side of the road. By the time he returned, I was already starting to do better. Anyway, it scared us both, as it was totally unexpected, and he promised to not ride that far away from me anymore.

Harry, I just had to laugh when I read your description about using the phone and camcorder. It brought back some fond memories of my 14 year-old son before he died. Greg loved to take all the broken appliances and take them apart, always hoping to figure out a way to fix them or invent something else. One day, he really surprised me with an invention that worked pretty well. He'd taken a wireless FM microphone, the kind you use for karaoke, where you tune the FM radio to an unused station, then when you talk in the microphone, your voice comes out over the radio. He took the barrel from a barrel of monkeys, and he put one of those big square lantern batteries inside. He took the guts of the wireless microphone, and wired it to the battery. Then, he attached an antenna from a broken radio to the outside. He also attached a headphone plug. He closed the barrel of monkeys, and put duct tape around it. Next, he put on a pair of headphones that had an FM radio built in. He plugged the barrel of monkeys into the TV's headphone jack, and sat down on the couch. When I asked him about it, he said "I'm just listening to the TV. You can use it if you want. You can hear the news while you're in the kitchen." When I asked him where he got the plans, he said "I didn't have any plans. All you've got to do

is_______. It has a range of 35 feet, but if you change a few things, it could have a range of 100 ft." The kid just amazed me, because he was learning disabled, and had no training in electronics or radios. Right before he died, I also learned that he could accurately identify the military planes that flew near the hospital. He said he'd read about them in the library. Anyway, thanks for bringing back that memory. I'm looking forward to hearing how your project comes along.

I own a tandem, and in that special cycling world
there is a relevant product, because it can be hard
for the 'captain' and 'stoker' to comunicate (wind and
traffic noise). See http://www.tandem-talk.com/. I
don't have one of these - I am too cheap! It should be
a simple project, right? Come on guys?

My real project is getting the girlfriend to captain
so I can just sit back there and just operate!

I've seen similar items sold for use with motorcycles. Some
are about the same price as this Tandem Talk. I would
assume that the motorcycle ones have decent noise
filtering, since they are designed to be used at 70 mph on
top of a loud motorcycle.

Sam

1024. Re: [BMHA] More wireless headset ponderings..

Yahoo group: BMHA
Date: 2005-08-18 07:27:02 UTC
From: Harry G. Seyfert
Topic: 926 Message: 1024

I find it so very interesting how some people have a "natural" talent for certain "subjects", even if they don't have any formal training in it.

Many years ago, I took a similar cordless microphone module (a kit version) and made an interface to connect it to the audio output of a short wave radio and the antenna connection to our fm/TV antenna. Then, when my dad and I would go on TV service calls, I could listen to the sw station on a portable fm radio by pointing the antenna towards that house. I was at the time studying political science and listening to the United Nations Security Council proceedings over WRUL. It worked over about a 5 mile radius.

If you can afford the cost, I believe the tandem is the best compromise. You be the captain and hubby be the stoker. Better power distribution on the chains. I would love to try a recumbent tandem (I call them chaise lounge bikes). I do have an old Schwinn Twin that I take out occasionally, but being a single speed, it is best for riding on table-flat ground!

Sounds very interesting. I'd like to hear how your progress is going. I think I'm the one who brought up the original question. I had asked about problems with using our Cobra or Uniden two-way radios on our bikes. My husband tends to get blocks or miles ahead of me, and we wanted a way to communicate with each other that was easier and safer than operating a cell phone. Several group members encouraged us to take up Ham and/or get a tandem.

As an update, my husband, whose dad is a Ham, was agreeable to both ideas. We rented a tandem a couple of weeks ago, and both enjoyed ourselves. We agreed it would take some practice to get the teamwork down, but we were really doing well getting a predictable communication system going.

Incidentally, a few days later, we were out riding with a group, and he got way ahead of me. He was at the front of the group, and I was near the back. I suddenly had an allergic reaction to something, I don't know what, and developed a rash and began having trouble breathing. My throat began to swell, and I started wheezing. Some people who were riding near me stopped to help, and fortunately, someone had some benadryl, which stopped the reaction. I had accidentally left my cell phone in the car, but another person called my husband, who didn't stop to answer his cell phone until he got to the bottom of a long hill he was descending. When he learned I was

having trouble, he had to turn around and go back up that hill, and make his way back more than two miles to where I was on the side of the road. By the time he returned, I was already starting to do better. Anyway, it scared us both, as it was totally unexpected, and he promised to not ride that far away from me anymore.

Harry, I just had to laugh when I read your description about using the phone and camcorder. It brought back some fond memories of my 14 year-old son before he died. Greg loved to take all the broken appliances and take them apart, always hoping to figure out a way to fix them or invent something else. One day, he really surprised me with an invention that worked pretty well. He'd taken a wireless FM microphone, the kind you use for karaoke, where you tune the FM radio to an unused station, then when you talk in the microphone, your voice comes out over the radio. He took the barrel from a barrel of monkeys, and he put one of those big square lantern batteries inside. He took the guts of the wireless microphone, and wired it to the battery. Then, he attached an antenna from a broken radio to the outside. He also attached a headphone plug. He closed the barrel of monkeys, and put duct tape around it. Next, he put on a pair of headphones that had an FM radio built in. He plugged the barrel of monkeys into the TV's headphone jack, and sat down on the couch. When I asked him about it, he said "I'm just listening to the TV. You can use it if you want. You can hear the news while you're in the kitchen." When I asked him where he got the plans, he said "I didn't have any plans. All you've got to do is_______. It has a range of 35 feet, but if you change a few things, it could have a range of 100 ft." The kid just amazed me, because he was learning disabled, and had no training in electronics or radios. Right before he died, I also learned that he could accurately identify the military planes that flew near the hospital. He said he'd read about them in the library. Anyway, thanks for bringing back that memory. I'm looking forward to hearing how your project comes along.

Subject: Re: [BMHA] More wireless headset ponderings..

Hello Eric,

If you look at any telephone circuit, you have audio in (microphone) and audio out (earphone). The H/T also has the same signals plus PTT. This last one could be our frustration! VOX could be used, but other members have mentioned the wind noise, breathing, etc. causing false keying, so some other technique must be devised.

I envision using the base transmitter / receiver module to interface to the H/T and then use the handset transmitter / receiver connected to the

Plantronics mic / earphone set with the phone radio circuit in a small belt-mounted case, along with the cordless phone battery. The base unit can be powered by the 2.1 AH camcorder battery. The base unit has a "Page" button. Too bad it isn't on the handset. Perhaps it could be used to activate the PTT.

Since so far, I only have $2 invested, I think I can come up with something that will work. I already reaped a 52mm photographic filter from the camcorder that will work very nicely on my Canon digital camera, so my investment has already paid for itself!

The radio unit inside the base unit has 12 leads coming out of it. I need to study the circuit board a bit in attempt to figure out the signals, power, etc. Then, the same will need be done with the handset. My phone is a GE model 2-6920B.

I am in the process of moving, so I figure this project will find some time long about winter, when cycling is only a wish and a dream. But, having all the goodies available means I can experiment and test without even coming close to my bike. How about this -- operating your base radio from your deck or patio and not having to drag along coaxes and power cords!

If you are interested, I'll keep you posted of my progress and stumbling.

Your SW radio creation DOES sound very similar to what my son made. You're fortunate to grow up with your dad's occupation to help develop your radio and electronics knowledge base.

Get a tandem and have hubby be the stoker? Hmmm...now there's an interesting mental image: power play / difficulty giving up control. Not sure if I'm ready for THAT challenge yet. He's almost a foot taller than me, so it WOULD be easier to see. Perhaps we should look at one of those tandems that has a recumbent stoker position in front, and a traditional bicycle in the back. The captain can see over the stoker's head.

1029. Bike Recommendations

Yahoo group: BMHA
Date: 2005-09-05 14:32:26 UTC
From: Glen Reid
Topic: 1029 Message: 1029

This is more bike question than radio question, but I think some of you can help me.

Having been advised by my doctor to "GET MORE EXERCISE", we have concluded, due to some existing joint problems, a bike is an appropriate "vehicle". :-D
A radio could show up on it later, but that is not my primary concern right now.

I have had little bike experience in the past 50 years, so I am asking for advice on what to get.

This bike will hardly, if ever, get off the suburban streets around my house or parks roads in the area. I live in the Texas Hill Country so some gearing of the drive will be in order (do I really need 21 gears ratios?). The machine will need to be comfortable, some back problems will keep me in the "upright" position as opposed to the sitting riding style (recombinant?). "Comfortable" here means "able to accommodate my ample posterior".

Have looked at TREK and Specialized brands and find that bike have really changed since I was 10 years old. These are very light and complicated. I don't mind spending a "good" amount but I want to get what I need, not the one the salesman is getting the best commission on this week.

So, I need some general advice on good brands, and configurations for my needs. Please ask me questions if it will help in advising me.

BTW...I have a helmet, but I cannot see myself in Spandex.

Thanks.

1030. Re: [BMHA] Bike Recommendations

Yahoo group: BMHA
Date: 2005-09-05 16:29:38 UTC
From: scott laughlin
Topic: 1029 Message: 1030

Hi Glen,

I don't think there is so much difference in bikes as there is bike dealers. After a number of years on a Bike Friday I bought a used Cannondale. But it probably could have been any popular brand, I suppose, had the dealer had something different on hand.

No, 21-speeds aren't a must. My BF has 14, and I pedaled it across Arizona and New Mexico summer before last. But your having not accumulated much experience in the last 50 years, will be glad, very glad, to have the deep gears until your legs stop screaming to go back home.

I turn 68 this month, and I pass few people on the streets and paths around Allen (I live north of you, just 27 miles north of Dallas), but being last doesn't dampen my fun. And if you wish to drive up this far I'll be glad to show you the Plano Cycling and Fitness Center, where is there is service after the sale. They have a lot of used stuff, plus a ton of new bikes.

I know you stated that you may never get out of your neighborhood. You may not. But I would advise you to set your sights high. There are seven or eight of us "older people" who are planning the ride of our lives this coming March, and you are invited. We could use another ham. And if you would like to be included in the ongoing discussion loop just say so, and I'll put your address in the book and all the messages will be echoed to you, and your participation is always welcome. Several of those in the group are approaching their mid-70s--fearless fossils, Jon, the Army Major calls us.

I'm in the process of trying to include an APRS station on my bike, as well as a 40-meter QRP CW rig. Power and weight are the ugly factors that keep getting in the way.

Let me hear from you, Glen.

Scott

1034. Re:Bike Recommendations

Yahoo group: BMHA
Date: 2005-09-06 00:24:07 UTC
From: Len Revelle
Topic: 1029 Message: 1034

Glen,
Do a little reading on recumbents. They are the recommended bike for those with back ailments. I switched from the mountain bike to a Sun Bicycles EZ-Sport this year though I am by no means a bike nut. I simply found it more comfortable for my 5'11" x 270 pound frame. Mine is a long wheel base (LWB) bike with standard handle bars.

The recumbent does require use of a completely different set of muscles, and this takes some getting used to, but it does not wear on the back. As one rider said, "You may be tired after a long ride on a recumbent, but you won't be sore.

1037. RE: [BMHA] Re:Bike Recommendations

Yahoo group: BMHA
Date: 2005-09-06 01:43:00 UTC
From: kc0pah
Topic: 1029 Message: 1037

I have a Sun Easy--1-SC recumbent it is same basic recumbent as the EZ Sport with a small rear wheel, details on all their models is available at http://www.easyracers.com I found one on E-BAY cheap. The bike is easier to ride than most recumbents and has been very comfortable with no back pain or problems. I also am a good size guy, 6 ft 265lb, and the only change I made to the bike was a set of pedal spacers to increase the width of the crank set. This is a change I would suggest to anyone of a larger size to prevent knee problems that a set of cranks that are too narrow for your hip and leg dimensions may cause.
I have a 2 meter / 440 antenna on the back, it was very easy to mount in the back of the seat rails.
There is also lots of room behind the seat for a small motorcycle battery and 30 watt amp for my hand held a TH-F6A the system works very well and is a pleasure to ride.

From: Redding, Walt
Topic: 1038 Message: 1038

I'll chime in and agree with the recommendation to look into recumbents. Look at recumbent trikes as well. More expensive, but well worth it in my opinion. One added benefit of riding 'bents: you don't have to wear the padded lycra/spandex shorts to stay on the bike for any length of time.
Walt kj5zf
Fort Worth, TX

So, I need some general advice on good brands, and configurations for my needs. Please ask me questions if it will help in advising me.

BTW...I have a helmet, but I cannot see myself in Spandex.

Thanks.

I'll second that! Got a 'bent last year and love it, although I also love the peace and serenity riding the rolling hills of NW Illinois enough that I seldom put the FT-817 and Hamstick on! Find a dealer specializing in recumbents and take a few test rides, there are big differences between the long and short wheelbase models, and you'll probably find something in the longer size more to your liking, and easier to make the transition from an upright. Twenty mile rides are a breeze, even after a 40 mile ride like I did on Monday you're just tired, not in pain With all due respect to all the upright riders out there, sitting on my RANS is like sitting on a lawn chair, and you can wear whatever you like!

The other option you should consider is a "Comfort bike" which is styled more like the bikes we knew as kids, and as the name implies, are good choices for many folks. Try both!

1042. QRP Island Event Notice - 25th Sept - Maple Island, Ottawa, Ontario, Canada

Yahoo group: BMHA
Date: 2005-09-09 16:35:25 UTC
From: Martin Gillen
Topic: 1042 Message: 1042

Hello.

Full information about this upcoming event can be
found at the following website:

http://www.sunim.plus.com/maple/index.html

WHEN: Sunday 25th September 2005 - 10am to 5pm.
WHERE: Maple Island, Ottawa, Ontario, Canada.
FREQUENCIES: HF SSB - 3.815MHz, 7.260MHz, 14.260MHz
HF CW - 7.026MHz, 14.026MHz
VHF - 50.125MHz, 144.2MHz, 146.520MHz
CALLSIGNS: VA3QV, VA3SIE
POWER: QRP, <5W
ANTENNAS: Low delta loop, random wires.

Synopsis:

"We will operating two QRP stations from Maple Island
to activate it for the Canadian Island Award Program.
We will be packing all our equipment in on bikes, so
we will be using light field antennas and QRP power
levels. We are hoping for between 25 to 50 contacts
with amateurs from as many different countries as
possible. Please check the website shortly before
the event for any breaking news"

1043. Re: [BMHA] Dropping the code requirements for hf?

> Does anyone think that manufacturers would stop including the mode
> in their equipment designs if it were no longer required? I think they
> would take it out. Hopefully I'm wrong about that.

They won't be removing CW from the rigs anytime soon. It's trivial to add to an SSB rig, and it's likely that the majority of people on HF use it at least occasionally.

Even if nobody used it, it would still be there because the perceived value of a radio is directly proportional to the number of listed features on the advertising material...

And even if an SSB rig was sold without CW, it wouldn't be on the market five minutes before someone hooked up a code oscillator to the microphone jack.

Here you go! http://www.qsl.net/wx2nj/

I've built several of them. I did make a modification to the mounting so I could still put a bag on the tail-rack. I used a piece of aluminum traffic sign to extend back a few more inches past the back edge and mount the "duck" on that.

I just uploaded one jpg with me on my recumbent to our yahoo site. I
have rounded up the supplies to build the dipole, I have a friend who is
locating a nice 3 amp hr cell to go with my setup when it is finished.
I can't ride "wedgies" anymore and after riding my bent for a while, i
wouldn't want to return to them even if I could :-D. My recumbent is
imported by ActionBent and is a Tidal Wave II, it has a 700C rear tire
and 451 (20") front, with steering under the seat. I average 14mph in
crowded bike paths but on open roads between 16 and 19 mph with no
strain on my back at all.
Good luck on your purchase whatever you decide.

OBTW Walt do you still ride at lunch daily? I'd love to get with you
over there if I can ever get the chance.

1049. Re: [BMHA] re: bike recommendations

Yahoo group: BMHA
Date: 2005-10-05 23:33:39 UTC
From: EricJ
Topic: 1038 Message: 1049

I ride both a mountain bike and a recumbent (RANS V2).
I commuted 20 miles round trip on the V2 for 4 years,
something I never would have survived on the mtn bike.
The V2 is fast, comfortable and the front fairing
offers some protection from the elements and bugs.

I haven't mounted a rig on it yet, but I hope to this
fall and winter (Summer is too hot to ride for
pleasure here). Probably my KX1 with a Hamstick on the
back.

BTW, there are some great riding shorts made for mtn
bikers, but well suited to 'bent riders. They have a
loose fitting stylish shell on the outside with lots
of pockets, and a lycra bike short inside. The first
time a bee flies up the leg of your shorts, you'll
appreciate the advantage of tight fitting leg bands.
This is more common than you might think given the
riding position on a 'bent. They just look like
regular cargo style shorts so you don't have to look
like you're smuggling fruit when you walk around in
public with them.

Hello all! New member here. I've been reading the messages for a few days for ideas; lots of good information available in the message base.

I just got a used mountain bike and intend to use my FT-817 for bike mobile operations. As always, the antenna system is the biggest issue to overcome. The bike has no luggage rack, but I imagine I'll invest in one.

I have entertained mounting the radio and antenna in a camelback sheath, using a headset and handlebar-mounted PTT box.

Any suggestions welcome.

Joe/Walt,

When/where do you ride?

I just moved from Euless to Arlington 2 years ago.

Put in 39 yesterday west of Mansfield on a "wedgie."

I just uploaded one jpg with me on my recumbent to our yahoo site. I
have rounded up the supplies to build the dipole, I have a friend who is
locating a nice 3 amp hr cell to go with my setup when it is finished.
I can't ride "wedgies" anymore and after riding my bent for a while, i
wouldn't want to return to them even if I could :-D. My recumbent is
imported by ActionBent and is a Tidal Wave II, it has a 700C rear tire
and 451 (20") front, with steering under the seat. I average 14mph in
crowded bike paths but on open roads between 16 and 19 mph with no
strain on my back at all.
Good luck on your purchase whatever you decide.

OBTW Walt do you still ride at lunch daily? I'd love to get with you
over there if I can ever get the chance.

Welcome Ron, say I found the one I put on my bike at Target, it's very
well made has lost of mounting hardware and is spring clamp type for
under $15.
Good luck,

The advantage to the ¼ wave is its simplicity and it□s relatively small size. The disadvantage is it requires a ground plane, something difficult to achieve on a bike.

Hi Ron,
Welcome to the world of biking and radioing, its a blast.
Thats an interesting idea about the camelback, but seems like it could wear on your back on long rides.
I have the radio and battery in a rack pack with a harness coming from the radio to a stationary jack on the bike. When I get on the bike, my headset plugs into thos stationary jacks and connects me and the ptt to the radio. It works well except for this coiled cord hanging off my side when I am off the bike. But it keeps the weight of everything on the bike and not on me.
I have enough coil too that if I need to stand on the pedals, the cord moves with me.
Just another option.

I have actually found that a 5/8 wave antenna works decently well on a bicycle if it is mounted on a metal rack. Base loaded half-waves don't require a ground plane but they can be finicky and don't offer much gain (not that you need much, but it is a matter of personal opinion).

1058. Re: [BMHA] Re: First antenna for bike

Yahoo group: BMHA
Date: 2005-10-06 20:46:58 UTC
From: Bill Sharp
Topic: 1044 Message: 1058

Hello everyone,

Just for informational purposes, we, the bicycle mobile ham force that supports GOBA, the Great Ohio Bicycle Adventure, tested various antennas in the late 90's for bicycle mobile use so that we could standardize on a particular design.

We did this for practical purposes. We wanted as much gain, of course, as possible, but as important, we wanted to be able to have a stock of replacement parts so as to keep everyone up and running during the course of this 3,000 rider, week long tour.

We were fortunate to be able to work with Hartley as well as the technical staff at Larsen on this issue, before they were bought out.

The solution we all of us agreed on is the half-wave rather than the 5/8 wave. In fact, when properly fed it performed better in tests with field strength meters we use to determine the various radiaton patterns generated from a bicycle mounting. The 5/8 wave is the antenna of choice for our ambulances, cars and trucks as they have huge ground planes when the antenna is mounted in the center of the roof of the vehicle.

The secret is that the feedline for the half-wave needs to be an odd multiple of a quarter wavelength of the frequency used for transmitting. That provides the other half of the antenna, electrically. Our arbitrary frequency, since we use somewhere between 5 and 10 different frequencies each year, is 146.000 MHz.

To that end, Larsen makes, or will make for you if you ask, a GBR-1 and a GBR-2. The 1 feedline is three-quarter wavelength's on 2 meters and the 2, more for tandems and long feedline applications like a 'bent is five-quarter wave lengths long.

We keep a supply of the GBR-1's. It has a stress relief sleeve at the BNC connector end (lower loss than a PL-259) and is connected at the other end with an NMO mount.

Details of the mounting plate, which is again, specific for our application, can be found in the May, 1998 issue of CQ-VHF. A copy of that article with a template, is accessable from the BMHA website. We designed this so that it could be mounted and disassembled with a minimum of effort and could be used with any bike that has a saddle.

I hope this is of some help for those who would like something professionally made and works right out of the box or has an application like ours.

My best to you all,

Bill
w8hi

P.S. We also carry what today is called a stinger which is no more than a 1/4 wave-length of wire attached at the base of the quarter wave hand held antenna. It just dangles. We use a solder post that was often found around the collar or neck of volume controls or variable resisters used to ground one side of the resister. It slips right over the female BNC. It

often makes the difference between getting out and not, and in our business of calling in a squad for an accident, we have to get through on minimally available power.

We use BNC to SMA adaptors with our handhelds as SMA's are just too fragile for our applications.

B.

A 1/4 wave dipole will not load at 50 Ohms impedance into your radio.
You need a 1/2 wave dipole.

Hmmm, guess I should have read a little more closely (didn☐t see the ☐dipole☐ part). You are correct; a dipole wouldn☐t need a ground plane. I was thinking a regular quarter wave vertical. Thanks for the correction.

I use a commecial half wave on my bike. Half waves are fairly
independant of ground. I put out a great signal on 2M with my halfwave.

1/2 waves can be a bit difficult to make though due to the matching
system, but they are cheap enough to buy :)

In fact mine is dual band, a Watson W-770HB. A GREAT antenna!

Are you using a 1/4 wave dipole (~ 19" total length) or 1/2 wave (~ 38" in length)? Like I mentioned earlier, a 1/4 wave dipole would be too short and would not present a 50 Ohm load to the transmitter, whereas the 1/2 wave would make everyone happy!

Topic: 1063 Message: 1063

Hello Everyone,

"The Colorado State Patrol has added an alarming new policy banning the biggest bicycle events in Colorado! Their new policy limits bicycle and triathlon events to 2,500 riders, but this limit can be lowered at any time putting every event at risk. Bicycle tours, races, charity rides, group rides, and triathlons are all affected."

- From Bicycle Colorado

See the details at:

http://bicyclecolo.org/site/page.cfm?PageID=651

As a follow-up let me provide this information to those of you who have unlimited US telephone calling.

Contact Chief Mark Trostel

Email via his assistant: marc.morelli@...

Call: 303-239-4403

Fax a Letter: 303-239-4481

I just spoke with Marc and after a short conversation transferred me to the public affairs sargeant's voice mail. I asked for any statistical information on increased safety that would result from limiting the size of rides or tours.

According to other public officials, a quick, polite call to Marc might be more effective, followed by an e-mail and then signing a petition with all three being the best. It only takes a couple of minutes.

Colorado depends in large degree on tourism to fuel their economy. Getting calls and e-mails as well as the petition, particularly from out-of-staters, I think, would be effective.

Thanks,

Bill

w8hi

1064. Merry Christmas to all

Yahoo group: BMHA
Date: 2005-12-02 12:55:20 UTC
From: Joe Martin
Topic: 1064 Message: 1064

I hope all have a great holiday season, I just took care of my personal gift to myself :D Locally we have a great program involving the Bikes for Tykes program which is run by Pete Cox of our Fort Worth Bicycle Association.While visiting the other day, I saw a nice Cannondale Pepperoni MTB hiding ion a back corner that I asked him about. Because of my short inseam it's hard to find vintage rides (which are my favorite) and this made in America Emerald beauty was a 26" wheelbase with a new GEL Cloud-9 saddle fit me like a glove. Needless to say I gave a nice donation to the B for T program (they don't sell, you provide your best donation instead) took my new ride home and quickly replaced the old dried out tires with the new one Pete threw into the deal and after some effort pried off the stuck like glue pedals and replaced with some of my favorite spds. This will be a great bike for bike mobile work, especially for a lot of our local club events. I added a back rack, and lights and mirror and cleaned up the old rusty chain. this choice bike has been out of circulation for a while and from the ID it came from La some time back before the floods.

I hope you all find a favorite bike and do some riding when you can get out this Christmas Season. I'll post some photos in my folder and once I come up with a good mounting system for my 20 watt halogen light I'll let you know.

Hi Joe,

What a great story!

I live not too far from you--Allen. A few months ago
I visited Plano Cycling and Fitness, and found a nice
Cannondale with 700 rubber.

Only an hour ago I finished a 12-mile ride on some
quiet streets. Autumn is always a fun time for
cycling.

Topic: 1064 Message: 1066

I was very impressed with the workmanship of my Cannondale Pepperoni. It had what I call "storage dirt and grime on it and the old dry rotted mud tires when I rolled it out of the warehouse Pete has his little shop in. The chrom-molly frame and light weight were the first things that impressed me, that meant I could add more toys and still have less weight :D When I finished cleaning it up at the house and replacing the old tires with the new Cheng Shin City Classic 40-559's the Pepperoni started showing real promise. I added an extra rack i had and Car eye Micro Wireless I had laying around plus running lights, cleaned up the old chain lube er up and today I took it to the park to play :)
Believe it or not I was THE only bike in the park this mid morning. It took a few trys adjusting the seat but i finally got it right in that "sweat spot", and all along the shifting was silky smooth and the machine mad no noise at all, no rattles or rubbing anywhere. It was like gliding on an invisible magic carpet. I have owned a few very nice rides in the past and in quality, precision and workmanship and engineering I would put the Cannondale at the top of the list. Not because I just bought it for practically nothing :D (the guilty feeling will pass :D) but I am a perfectionist and I am blown away by this bike.
I put 17.5 miles on before I knew it and had to leave to tend to real world stuff . Can't hardly wait till I get a chance to ride again, that is the neat thing about our passions for radio and bikes. we can slip out of the reality world for a few moments to gather ourselves and be better prepared for the challenges ahead of us.
Happy trails,
Joe/Ft.Worth
ps I have added a few shots and Have a couple I took on the road to share today

1067. Antenna Mount

Yahoo group: BMHA
Date: 2005-12-14 19:18:52 UTC
From: Bill
Topic: 1067 Message: 1067

My good friend, K8ZDA just sent this site to me:

http://www.amazon.com/exec/obidos/tg/detail/-/B0007M4L0G/sr=1-2/qid=1134

It's the first time in several years that we've seen a functional antenna mount that can be used on GOBA, The Great Ohio Bicycle Adventure (GOBA.com).

We have standardized on Larsen 1/2 waves with a measured feed line tied to a BNC (better conductivity) and an NMO mount. The entire system can be replicated and replaced when a bicycle mobile ham needs it. We carry spares of everything for backup.

Until now, everyone's been pretty much on thier own if they didn't get in on the Minoura water bottle mount that was available in the '80'.s

This looks like a worthy replacement.

Best,

Bill

<http://pg.photos.yahoo.com/ph/ephesians2v4@.../album?.dir=849c&.src=ph>
and my some of my BNSF Christmas train photos from the Emporia Christmas
showing, 12-2000, on the route the train took. it was eastbound with
next stop at Osage city and Topeka KS for the next overnight stay. It
was in Emporia overnight before that. it plays music and has lots of
lights. one of a kind experience and of a lifetime as BNSF doesn't do
this anymore. that was the last time. it was a BN tradition in the
past before the merger.

Not planning on going this year but I've ridden the route many times. Durango is always wonderful and Pagosa Springs is great because there is a creek that feels wonderful on the legs after the ride. Ahhhh... Many great memories about that day. Next day is quite a climb though.

I'm not a big fan of going through Alamosa. Too flat and borring. Last time I did it, some guy spaced out riding and rode right over the back of a motorcycle cop. Just wasn't paying attention. Also have memories of tents not staked down well rolling across the the ball field like tumble weeds!

Hey, but I'm sure you'll have a great time!

Bruce KG0SH
Golden, CO

P.S. Never taken a radio with me on these trips since the climbs are so hard but it sure would have been nice heading over the flats.

1079. Re: HF Rig For My Sun USX3 Trike

Yahoo group: BMHA
Date: 2006-02-22 16:54:08 UTC
From: John
Topic: 1076 Message: 1079

While, I test rode both the USX and the Sun tadpole, I finally chose a different brand of bike.

My observations:

EX3-USX
1) Neat looking bike. Somewhat heavy (I believe it is around 60 lbs). Easy to adjust (two clamps on seat and then the lock pins in the rear support posts. Limited gearing. More graceful to mount and dismount.

2) Sun tadpole. Somewhat quicker. Lower to ground = better turning stability. Sizing adjustment by sliding the boom in and out. Not difficult, but not as friendly as the USX. This is only important if you anticipate multiple people using the vehicle. About the same turning radius as the USX. Feet elevated compared to USX. Somewhat heavy compared to other trikes.

Depending on how you can access the trail, transportation might be a consideration for either choice.

Safety note: on almost any tadpole design trike I consider clip-in shoes and pedels a safety necessity. With you feet elevated, it is very easy for you to lose your footing on the pedals when you hit a bump. This could result in your leg being pined on the road and you running over your leg with the crossbar (ouch!!!).

I purchased a tadpole style trike and do not regret it. Once clipped in, I don't have to unclip until I get to my destination. It's quick, and similiar to driving a go-cart. You get a whole new perspective when your posterior

One other consideration - tadpoles don't have a lot of space for radios - unless you get creative.

Most of all, test ride, test ride, and then test ride. The bike will pick you.

John,

I suppose I should have looked closer at a recumbent the last time I went shopping. But old dogs are slow to learn.

Everything here is diamond--a Burley Samba, Cannondale single, and a Bike Friday (if you can call a Friday a diamond).

My VHF uses an old 5/8 that has died an honorable death several times. This time I discarded the cover and the magnet portion and bolted it to the end cap of a section of 1/2" PVC and fastened that to a front pannier rack on the Cannondale. I grounded it on the bolt that holds the water bottle. The standing waves won't go below 1:1.2, but it seems good enough.

I put my HF in a trailer I built from the frame and wheels of a Bike Friday trailer. Using the smallest Rubbermaid Action Packer, I am able to provide a water proof place for the radio, a MFJ-9420. For an antenna I used an antenna bracket fabricated for the west coast mirrors on a semi, and fastened it to the trailer tongue. A MFJ 20-meter stick fits the same thread that the CB antenna used.

It's not as nice as some I've seen, but it works.

From: tedb@techkc.com
Topic: 1072 Message: 1084

Thanks for the input. I have just about talked myself out of the 305 due to the L-ion rechargeable battery.
it not user changeable only good for 12 hours, and many of my rides are weekenders.
I haven't yet been able to surmise weather it has an external power jack which might calm my nerves a little.
Thanks again.
Ted

1085. 14.4 Volt battery for the storage pack (comfort bike)

Yahoo group: BMHA
Date: 2006-03-12 02:09:51 UTC
From: earicci
Topic: 1085 Message: 1085

Good Evening Folks:

Last year there was a thread about a company that sold 14.4 volt sealed batteries ideally suited for the bike rack packs. I searched the forum and could not locate it.

It was something like batteryspace.com or similar. Does anyone know the firm?

Spring is about to sprung here in Minnesota. This is the first year I can take my bike out for bicycle portable. I am looking for a suitable 7 ampH source for a little CW with my IC706MK2G and end fed.

Thanks,

Eliot WB2S

We'll be using a Tokyo Hypower HT-750 (2/3w, 6/15/40) with a Comet UHV-6 vertical when we ride to Nova Scotia after FDIM. We have a tandem with a BOB Yak trailer and hope that will be enough of a counterpoise.... (but will carry a wire dipole as well).

Barry,

Have you considered building a UHF J-Pole from 300 ohm
television lead? You could put connectors on your
dipole and J and use the same lead for both. Yarding
a J into a tree would give you some more range.

We'll have your ear to the grould. Keep us posted.

1088. Hello, looking at Ram mounts

Yahoo group: BMHA
Date: 2006-03-14 04:15:26 UTC
From: n3kqx
Topic: 1088 Message: 1088

Hello. I'm new here, but have been cycling and hamming for a few years now. Last year I started running APRS using my TH-d7 and a Garmin Vista, but never had much luck getting out. This year I decided to go all out and get a better setup. So far I put a Diamond NR-770 on my rear rack, with a Diamond HRKS mount that has a few feet of RG-316 terminated in an SMA connector. I'm going to use a 12VDC battery I picked up at a hamfest to power the electronics, including the lights when I have them mounted. Early tests show a lot of improvement hitting digipeaters, and greatly enhanced audio on voice.

However, I've been putting the radio in the trunk bag until I can get a good safe handlebar mount. I really don't want to bounce the radio around (there are a lot of bad roads I need to navagate), but I would also like to see the display and not have to deal with the speakermic pulling off my jersey all the time. I've been looking at several options:

1) get a light mount and glue it on to the battery somehow
2) tear apart an old battery and use it to mount the bike to the handlebars somehow
3) find a suitable case and somehow attach it to the handlebars
4) Get a Ram mount (http://www.ram-mount.com/)

Has anyone delt with Ram before? Just looking at their website, it seems like they have a mount for just about everything, but I wonder how forgiving they will be if I pick out the wrong parts.

I've got several RAM mounts - they work great. I use them to mount a GPS on my bike (pedal powered) and on my motorcycle, as well as a suction cup windshield mount for my truck. RAM does make a mount specifically for the TH-D& radio, so it'll be fairly easy to mount the radio on your handlebars where you can see the display. Realistically though, the radio's display is kinda small, so I wouldn't expect to see it reliably while you're pedaling.

GPS units are built rugged .. they can stand the vibration .. MOST HT's
aren't .. personally, I would not mount my radio hard to my bike.

1091. D7 mounting

Yahoo group: BMHA
Date: 2006-03-15 19:16:14 UTC
From: Barry Bogart
Topic: 1091 Message: 1091

I just use a hose clamp around the top tube to hold my D7 on. The radio is in the canvas case and the hose clamp goes through the belt loop. It's not going anywhere. The D7 is right up to the stem, right under my face, so it is easy to see and operate. Simple is best.

BTW all the stock Garmin GPS handlebar mounts are crap! I have had both the eTrex and Rino versions break in half, dropping the GPS to the pavement. Fortunately the were both retreived before being crushe dby traffic, but now I always teather the unit to the handle bar as well. RAM mounts are stronger, all right, but are designed for motorbikes and are too heavy and large IMHO.

BTW all the stock Garmin GPS handlebar mounts are
crap! I have had both the eTrex and Rino versions
break in half, dropping the GPS to the pavement.

Ditto on the Magellan mounts. The mount as designed won't hold my
Explorist on bumpy roads and I've had very little luck using heavy duty
Velcro to secure it. Now I use a rubber band in addition to the Velcro.
At least the rubber band keeps the unit from crashing to the ground, but
still doesn't keep it in the mount like it is supposed to be. I've
thought about using nylon wire ties but then I'd have to cut them every
time I need to change batteries. What a pain...

Hi Walter,

I'm not experienced in the problems you've described,
so my suggestion may be no better. But I'll offer it
anyway.

Many outdoor stores like REI have bulk elastic cord
like that used for bungee cords. Maybe you could
fabricate a custom bungee cord with the little plastic
clips similar to those used on a fanny pack.

Whatever you try, I hope it works better than what you
supposed would do the job. I'd certainly give those
people a piece of my mind.

Well, that's the big concern right now. However, the D7 did survive a
fall out of the trunk onto pavement with only a broken antenna
connection, and the boards look like they are very well mounted. I'm a
little worried about on-going vibration shortening the lifespan, but
looking at the pictures here, I think there are lots of people who
don't have problems

I thought of that, but I don't have the clearance on the top tube, and I don't want to screw up the paint (even using an intertube shim will eventually cause the paint to get marked up). Besides, I don't know that the tubes on my bike are made to handle much in the way of sidewall compression.

I'm leaning more and more toward a handlebar bag, if I can find a small one. I'm going down to Denver today to look around at some of the shops and REI. I'll post what I find.

I've been riding with an Etrex Vista on my handlebars for about 5
years and several thousand miles with only one incident of the GPS
falling off. I rode over some very deep rumble strips that shook the
heck out of me and the bike. I was very suprised that it was the only
thing that failed.

One thing that seems to help keep everything secure is to shim up the
batteries. Keeps it from rattling too.

Howdy Richard,

I just came back from a visit to RAM and they look like a nice, if not costly, option. I got a little more plebian in my approach and use "conduit holders" from the local hardware store. They create a VERY solid connection to the bike handle bars. http://w9xs.us I've got about three years and 6000 miles in with this mounting system supporting an IC706MkIIG on the handle bars and the radio has had no problems. There is, however, a great deal of vibration as you mentioned. I've had the coax connector on the back of the radio unscrew itself, the power cord vibrate out and, on the back of the bike, a few hamsticks and a 102" whip unscrew themselves.

My current setup uses a geeky Cannondale "hybrid bike" that has shock absorbers both front and back. I'm no longer the dashing spandex figure on a racing bike - but my Physical Therapist is happier.

73,

Topic: 1091 Message: 1099

Ditto here, I've been riding with a Vista on my handlebars via a Garmin mount for about 6 years. The reason I bought the gps, with the map display was to ride trails, and get good tracks of the trails, so that I could single-track off trail, and find my way back to the trail when I wanted to. I've logged over 2k miles single tracking, and over 4k trail riding (mostly converted railroad beds and logging roads) with the Garmin on my handlebars (solid frame bike for me, no suspension at all). My mount is shimmed up with tube material, and I've always lashed it up to the handlebars with the strap, mostly to get the strap out of the way (don't leave the strap too long, if it does come loose, you don't want it to get down between the spokes and the fork), though I don't recall it ever coming loose on its own. It's survived some spectacular crashes over the years.

The only two issues I've had are the batteries jiggling (cured by a little foam in the battery compartment), and losing the satellites in the tree cover or because my body is up over the handlebars and blocking them.

Like the old TImex adds, the system has taken a licking, and kept on ticking.

When I'm actually tracking which is a rarity, as its pretty hard to get digipeated where I usually ride, I carry the gps, tt3, and ht on my back in my camelbak (keeps the cables out of the way, and places the gps where my body won't block the satellites).

From: Peter Wang
Topic: 1100 Message: 1100

I just got a Yaesu VX-2R, what would be a good case for it? I want the case to be water / sweat resistant, as the HT will likely ride in my jersey pocket. Thanks.

Pete, KF5ND

1101. VX2r cases

Yahoo group: BMHA
Date: 2006-03-22 05:50:49 UTC
From: Barry Bogart
Topic: 1101 Message: 1101

I found a thing that attaches to the vertical part of
my stem, which is the perfect size for the VX-2r. The
velcro attachment is vertical instead of horizontal as
a belt loop would be. I find that better than in a
jersey pocket.

There is a company I think called Western Case
(although Google can't find it) that makes very good
cases for just about every HT. I have seen them at
many West Coast hamfests.

I also have a number of cases fro Calde Ridge
(http://www.calderidge.com/catalog/), although it will
be very hard to pick one from their catalog.

Good luck in your search.

Barry

1102. Good case for VX-2R ?

Yahoo group: BMHA
Date: 2006-03-22 16:49:32 UTC
From: Arnie Grubbs
Topic: 1100 Message: 1102

I have one of the Western cases for my VX2r, and it works good. I
got it last year at the Dayton Hamvention. I don't remember what
the dealer's name was though - sorry... It has a number "31" on the
small tag next to the Western case logo if that helps.

It is not 'water proof', as the top of the case is open, but it would
protect from body moisture unless you were just dripping with sweat on it.
I would bring a zip-loc bag if you were worried about rain....

One thing that I have done with the VX2r before I got this case, was
to put it in a small digital camera case that I got from wally-mart.
The case would then go into the bottle cage on the stearing "t" on
my recumbent bike along with some velcro strap to hold it in. I ran cable
to a 5/8wave nmo mount 2M antenna on a metal tab I had attached to the underside of
my 'luggage rack'. The small Yeasu speaker mike was pluged into the radio
and clipped to one of the brake cables on the handle bars so that it
faced me, so I could hear it easly.

I used this setup for about 500 miles on RAGBRAI in '04, and it worked
well, and got out fine.

Hope that helps..

I like it a lot. I use it for skiing, hiking and biking. It is
mounted on my bike stem with the garmin quick release, which is
pretty nice. I use it to track my rides and then load the tracks
into Topofusion, which is a cool program.

From: Bud Talbot
Topic: 1072 Message: 1104

I figure that I will charge the Foretrex each night when we camp on RTR. There are always some outlets around the beer garden, gyms, etc. I should be OK on battery life for each day's ride. I'm not yet sure if I can store 7 days worth of tracks in the track memory. I'm thinking about a palm pilot track download solution, though. . .

1105. Dayton Hamvention BMHA Forum Announcement

Yahoo group: BMHA
Date: 2006-03-24 18:13:27 UTC
From: nf0n
Topic: 1105 Message: 1105

Sunday May 21, 2006 08:30 - 10:30 Room 2

Bicycle Mobile Hams of America (The 16th Annual BMHA forum at the Hamvention)

Moderator/Speaker: Mike Nickolaus, NF0N
Speakers: Jeff Slattery, N8SUZ
Stephan Hepner, KC9EKU
Barry Bogart, VE7VIE/KD7IGX

Bicycle Mobile Hams of America was founded by Hartley Alley, NA0A in 1989 when a QST article asked hams who operate their radios while bicycle-mobile to get together and form a group. BMHA hosts a website along with the BMHA Yahoo Groups forum.

Our featured speaker this year is Jeff Slattery, Communications Director for the Great Ohio Bicycle Adventure, GOBA, a large annual week long bicycle event. Jeff will review with us some new plans to track their communication squads using APRS over their net frequencies.

We will have several displays and demonstrations of Bicycle and Trikes with their radio communication setups.

Mike Nickolaus - NF0N
Forum moderator

1106. Switching power supplies

Yahoo group: BMHA
Date: 2006-04-03 23:15:47 UTC
From: shepner2000
Topic: 1106 Message: 1106

Does anyone know where I could find a switching power supply which
will *not* interfere with my HT? The best Ive found is one that
"only" kills the PL tone....

Specifically, here is that I need:
Input: 18-27V DC
Output: 13.2V DC @ 3A

Since it exclusively lives on the bike, the smaller/lighter/more
efficient it is the better :)

Thanks!
stephen kc9eku

Yeah...but what about that long extension cord??

By their very nature, switch-mode power supplies cause interference! They work by means of a rectangular waveform oscillator. They are very rich in harmonics. If you can put it inside a metal container (watch the heat), and add ferrite "donuts" to which the power leads loop through, you should get rid of the most of it. A good example would be the ones that are used on the data cable on a computer monitor and some external printer power supplies. If you are wanting to start with 120VAC, 60Hz, most of the HP printers with external supplies develop around 28 VDC. That could be your source to feed the 13.8 VDC input.

The good news is the radiation from these doesn't travel very far. Once I connected my radio to an outside antenna, it was gone.

From: Arnie Grubbs
Topic: 1109 Message: 1109

Looks like the other replys didn't look very closely at your
requirements..

Sounds like you have a 24 volt DC system on your bike eh?

That seems kind of strange to me, could you explain more
about your set up? Why was 24 volt power chosen ?

I don't know what else you would have on your bike that runs on 24
volts, but if much did run on 12 (13.8) volts, it seems like you would
be better off converting your battery to a 12 volt system.

Anyhow, A linear regulator would "waste" about 1/2 of the power used as heat
to drop the voltage to 13.8 volts. It would be small and lightweight but kind of
wasteful...

A Bucking switching regulator would be more effecicent, but would need a
good bit of filtering to keep noise off of your 13.8 supply lines.
There are several chips out that will function as the heart of a buck/boost
regulator, but I can't remember the part numbers right now. A google
search might turn up something that you could build though..

Also,

You might write to "Nuts and Volts" magazine Q&A department, explain your
problem and see what they might come up with for a solution.. It might
take a couple of months though before you see it in print... but sometimes
they come up with some really interesting solutions to problems..

Ride ON!

1110. Re: Switching power supplys

Yahoo group: BMHA
Date: 2006-04-05 00:40:10 UTC
From: shepner2000
Topic: 1109 Message: 1110

My current battery is a 6S1P LiPO pack which provides a voltage range of 18-25.2V. The reason why I chose a 24v nominal voltage system is because a 12v battery (Pb or Li) still has quite a bit of life left when all the 12V electronics turn off. I do have some stuff that can handle the higher voltages too. My headlight is running at 15V (via a PWR) and the latest taillight will run off of 24v. The GPS should be able to handle 24V also but I have to check to be sure.

Ive tried 2 different switchers sofar. One from National (a "kit") and the other from TI (free eval unit). Neither really radiated much noise. The radio had to be <1" away before it was noticable. However, both had quite a bit of noise going though the DC output. I tried various filters and such but I dont have the equipment to properally test the results.

I do know its possible to do this but all the ham radio applications Ive seen are intended for 110v input, high output and far larger/heavier then I intend to carry. I *can* continue using the switcher as a charging-only system but that is annoying to do....

btw, if anyone is interested here the (somewhat old) pictures of my bike: https://www.asyla.org/gallery/
Im trying to hurry up and finish my wiring before the BMHA meeting at Dayton... :)

Hi again Steven,

Sounds like you are going to be at the BMHA forum? Great! I hope to see you there! I was there last year, carpooled with Mike, NF0N and Anthony, AB0XP to Dayton. I was riding around the convention on one of the electric scooters you can rent. I had broken my leg bone just a little over a month before the Hamvention. Didn't get much bike riding in last year.. 3-400 miles total, but I hope to make up for it this year with several week long or longer rides, plus training for the rides.

Anyhow, I found a bucking circuit that was originally designed for an FT-817. I suspect that your HT would work well , as it would have about the same current requirements. Here is a URL for a picture of the circuit..

http://www.ka7oei.com/817_buck_switcher2.GIF

A discription of the circuit is on this page, about 1/2 way down..
http://www.ka7oei.com/ft817_pwr_opt.html

I hope that it helps!
Looking forward to an "i-ball" QSO with you at the forums this year.
Mike NF0N and I are planning on carpooling again this year.

I hope that shortly after Dayton the trike I have on order will be ready and I can start doing some hardware additions to it!

Stephen,

It's hard to diagnose another person's problem from
afar. But it sounds like your primary wire, and/or
your ground wire to/and from the battery may be too
small.

You can't move DC very far without your primary wire
becoming part of the load, and given enough time the
resistance will steadily increase until it becomes THE
load and the stuff you're feeding will shutdown.

You may have been down this road, but if you haven't
it might not take long to visit your local Home Depot
and purchase wire as heavy as is practical. And keep
the length as short as possible.

As an experiment, borrow a small inverter and plug it
into the cigar lighter of a car. Plug in something, a
coffee pot or drill, and see how long it takes for the
inverter to go off line because the wire from the
battery to the cigar lighter grabbed all the power.

Just some things I learned the hard way while living
for five years off the grid with solar power.

I and my Greenspeed should be at Dayton again this year assuming that I can get a car rack in time. The hitch showed up today and Ill install it this weekend. I have a rack picked out (http://www.hitchrider.com/trikes.htm) and Im planning on ordering it tomorrow. Unfortunately I dont/wont have a drivable truck anytime soon so Im now discovering the "joys" of moving that thing with a car. I suppose this is why Greenspeed has developed their new small/foldable models.

sorry to hear about your leg....At about the same time last year I had done a real number on my knee during while riding (too many miles at one time on new pedals that apparently my knee didnt like) and also didnt get too many miles in last year. I think it was around 600 or so. This year Im starting off with strep throat so I havnt really started riding yet. The year before my daily commute to work was my typical training ride and every so often I would do a 2-3 day camping trip at 50mi a day.

This year, I have a new/better antenna mount that Im itching to try out soon. I also have a new under-seat cargo box and new lighting. The wiring harness needs installed yet but at least this time around I have a better idea of what I need to do.

On the original topic of this thread:
I plan on getting an 817 after I upgrade my license so till then Im using a VX-7R. That switching supply looks interesting and it appears that he came to much the same conclusions I did but went a different route to solve it. The current requirements are simular but that circuit looks like it drops the idle voltage a bit lower then the minV for my HT. Ill have to think about this a bit....

Thanks for the suggestions! In this case I dont *think* that wiresize was the case but thats always a possibility. The reason why I say that is because I only had the problem while receiving. Actually, I probably wouldnt have noticed if the local repeater didnt use PL tones. While transmitting, my signal got out and noone was able to hear anything odd in the audio. The cable I use is actually the one off the OEM power supply which I chopped and put powerpole connectors on. Ive used it pretty successfully that way in the car a number of times which is why I hadnt really considered it as a potential problem spot in this application. With that said, it is a pretty thin wire and I probably should look a bit closer at it.

I also really need to buy or borrow a decent scope so I can actually see what is going on and then better work on filtering out the noise.

1115. Opinions on sealed 12V 7.5 ahr batteries

Yahoo group: BMHA
Date: 2006-04-14 22:43:28 UTC
From: earicci
Topic: 1115 Message: 1115

Good Afternoon Folks:

I am working on getting my 21 speed ready for spring. I would like to HF portable, not mobile. I have an IC 706MK2G, which pulls 1.8 amps on receive.

Would like BHMA members to weigh in on the viability of a 12 volt 7.5 amp hour sealed battery. Batteries plus has such an animal.

I am aware of the issue of dropping below 11.9 volts. My goal is to be able to run CW at about 15 watts out. I would like to be able to use the battery for about 3 hours before discharge tranmitting about 20 percent of the time.

Any opinions?

Thanks,

WB2S (Eliot)

From what I understand the IC 706 series of radios are *very* inefficient QRP rigs. That is .. while you *can* dial the power output down .. the current draw is still considerable.

BUT, if that's all you've got .....

Hi Eliot,

I looked you up on QRZ, and you have enough hits that you've probably already tried everything I can think of to offer. But here goes.

I wonder if there's a way to turn off the display on your radio. I don't know that it would save much, maybe not worth while.

The batteries you mention are designed for alarm systems. They may not live through many discharges. Also, they may not take a very respectable charge without damage.

There is a source on eBay for solar panels. One that will charge 120 mA at 12 volts can be had for $10 to $12. It would fit on a rear luggage rack and help charge your battery while en route to where you plan to operate.

After your time as a ham you've come to realize how potent one-watt can be a suitable antenna.

There is a kit manufacturer that builds a battery monitor using leds and won't load the system down and give you a bum reading. You'll have to google rainbow kits, or something along those lines to find it. I think the kit was about $8.

Good luck and have fun.

Thanks for the initial replies. I probably should have been more specific in my post.

I am limited (at least at the moment) to the 706MK2G. What I would like to know is how long I can expect this battery to last before dropping below 11.9 volts at 15 watts out?

Also, if anyone has had any experience (and a source) for 13.8 volt batteries that might be more suitable.

Thanks,

Eliot WB2S

I cant speak directly to what you are doing but here is what Ive observed with my setup:

I have a headlight attached to a pulse width regulator (PWR). The light is a 20W @ 12V bulb that is being operated at 15V. Input range is 18-35V DC.

The original battery pack that I used were 2 12v 3.3Ahr sealed lead batteries in series (18-26V) which weighed ~7lbs. They could operate that light for 51 minutes before the PWR would turn off at 18V.

The following year I got a 6C1P 3300mA LiPo pack (18-25.2V) which weighs <1lb. That same PWR and headlight with these batteries will operate for 1:30 in cold weather and 2hrs in warm weather.

Obviously, battery chemistry makes a huge difference even if the ratings are the same.

Since your radio is drawing 1.8A and if it can operate down to 9V, I would expect it to receive (w/o audio) for nearly an hour with your proposed 7.5Ahr battery. For transmitting at 15W, without knowing what the actual draw is, Im guessing that it is pulling ~45W which means you would get perhaps 20 minutes till you hit 9V. If you really cant drop below 11.9V, I dont think you will have much luck since your battery will likely drop below that when you key up.

You can give it a try but I would strongly suggest on borrowing a battery before buying one. Using only 5W would greatly help or if you solve the 24V battery with switching power supply delemma that I had mentioned in an earlier thread that would be even better for you (and me). :)

let us know what you find!

My 2c is far too small. You will be discharging this at double the
recommended rate and consequently shorten its life.

OTOH, if you are only going to use this a few times each year or the
batteries are cheaply available, then do it. I find these batteries seem
to have a measured life of a few years anyway and I know what it is like
to lug a 18Amphr around {:-).

As to whether it will run for 3 hours I strongly doubt it. You need to
look at the discharge curve for this particular SLA. Remember the AmpHr
rating is typically for C/20 i.e. over a 20 hour period and discharge
rates are NOT linear. So even though it looks like you are only asking
for 3.75AmpHr from this battery, my estimation is it is definitely going
to fall below your 11.9volts (50% discharge?)

AIUI recommended discharge rate is C/10 or 750ma. So unless your standby
is well below this, I doubt if you are going to make it. You could
always do a home test and plot your own discharge curve.

From: Eliot Ricciardelli
Topic: 1122 Message: 1123

All of the responses are appreciated. My first cut at this had me stop at the local BatteriesPlus. I bought a 12 V 10.5 amp hour rechargeable sealed battery. The Werker's were cheaper but larger and heavier. This one is about 6 x 3 x 4 and weighs 36 ounces.

Last year I bought a bicycle pack that has pull out side panels. They really came in handy loading the IC706MK2G, MFJ-900B tuner, bencher keyer (yes I know I need some portable paddles), 20 gauge speaker wire, counterpoise, headphones, jumpers, etc. I have one of those comfort bikes, sits more upright, comfortable seats, with 24 gears. Well suited for the 40 and over crowd!

The YL and I rode through the Elm Creek Park Reserve in Osseo MN. The Twin Cities Park system is excellent. We rode for about 12 miles. I spotted a place high on one of the paths with a picnic table and tree. After the ride circled back around and set up camp. Of course, we drew attention.

I launched the end fed over the tree (those RF chokes come in handy in a pinch) and started tuning around. The Michigan QSO party was in full swing. I made about six contacts. I could tell my signal was down as the other op typically asked for repeats. 20 meters was better, 3 QSO's there, slightly better reports.

After returning home I found the voltage at 12.1 after 1.5 hours of operating. This was from a battery that had sat on the shelf at the store for quite a while, I imagine. I continued to use it at home for another 1.5 hours (about 70 percent receive and 30 percent transmitting at 20 watts out).

I am doing full test this week. So far I can receive down to about 11.8 volts. The battery will typically output up to 50 watts (what I would have expected no way I would do this in the field for long), I ran it at about 20 watts out.

More tests to follow. I will say the total extra weight on the bike was considerable. That is helping my exercise program. But I would like to drop a few pounds from the bike overall.

CQ
I frequent a bicycling tour newsgroup and saw a recommendation for bike tourists to get CB radios. I recommended that for just a little more work, a ham license is available.

(I was thinking that it would be infinitely more useful to be able to connect to a VHF/UHF repeater than to listen to the truckers use colorful metaphores to describe the bike rider that's "getting in their way".)

One of the riders came back with a question about operating internationally. In addition to the legality of operating in other nations, I started wondering about which bands would be most useful internationally, care and feeding of batteries, and what are the chances of the equipment being stolen if left unattended for more than 42 seconds.

Does anyone on the forum have any international bike mobile ham experience?

Thx
Dave

Topic: 1124 Message: 1126

Hello,
I have only experience with bicycle mobile in Germany. 2 m is great.
Lots of repeaters and friendly hams. Their band is shorter than ours
(144 - 146 MHz, I think). As for charging batteries, you'll need one
that will work on 220 / 240 VAC, 50 Hz and if fitted with a U. S. type
plug, an adapter for the European continent. In the U. K., the AC
receptacles are different, so one more adapter is needed.

Wow, me too, I bought an EZ3 SX last month and have almost 500 miles on
it so far.
Looking for suggestions for antennas and plan to add my aprs tiny Trak3
plus to it also :)
here in Ft.Worth. glad to see another trike on the list.

Be sure to attend the BMHA forum at Dayton, Sunday, Room 2 at 8:30 am. We will have several displays of outfitted radio bike and trike. One of each both with radio and antenna on them. This may give you some additional ideas.

1129. EZ3 Trike guys wanting rig/antenna advice

Yahoo group: BMHA
Date: 2006-05-08 23:43:04 UTC
From: 3 wheel BBQ Piggy
Topic: 1129 Message: 1129

Hey guys,

I don't have an EZ3 but I do have a WizWheelz recumbent trike and I have been doing
HF tricycle MOBILE for a couple of years in the dry season.

I can tell you what I use, but more importantly I would ask if you want to wear your control head on your belt or body or want it on your trike - more about that in a minute. If your rig does not have the front separate, do you want to wear it or place the rig in a pannier and have a Heil Traveler headset running up to you?

About mounting the control head on the trike, I suggest that you look at the frame of your trikes and consider where a good place is where you could mount a gooseneck that can hold the front of your rig. Looking at the pic of the EZ3 it looks like it has only one wheel up front and any mounting would be on the main, center tube, that or a handlebar bag that could hold rig front or rig and body in it.

I use a gooseneck on the front left arm of my trike. The gooseneck is held securely in place by one metal auto hose clamp. The gooseneck has a plate at the top of it to hold my control head and next to it I have a GPS holder. I use velcro to secure all the remote cables that run back towards my rack and side panniers. I have a bike trunk which holds a 33Ah Gel Cell -big but sometimes I go up to 11 (Spinal Tap joke) up to 100 to get the DX that cannot hear me at lower levels.

Antennas, any mount that will hold a hamstick will also hold the coil antennas like the Buddistick, etc.

Good luck, you already made a great decision getting a trike!

Just a reminder of the BMHA forum at the Dayton Hamvention. See the full details on the BMHA website, www.lafetra.com/bmha I am bringing many of the past BMHA newsletters with me, they will be free to anyone who attends the forum. The newsletters have many antenna articles, product reviews and hinks and tips for Ham Radio bicyclers.

Hope to see many of you there.

The standard ribbon lead J-Pole is actually an endfed 1/2 wave dipole. I use a slight variation made out of 50 ohm coax (old network cable - complete with BNC on one end) and it works great when tied to a fiberglass safety flag pole.

1133. Antennas for a Tour Easy Recumbent ?

Yahoo group: BMHA
Date: 2006-05-12 01:42:19 UTC
From: Greg Heath
Topic: 1133 Message: 1133

Hi, name is Greg KB2QQM, from Racine, WI. I have a Tour Easy recumbent from www.easyracers.com and want to put some sort of 2M handheld and antenna on the bike. I currently have an Icom W32A. Eventually there will be some sort of HF. Anybody have any ideas for this bike. I currently have a flag on back, but not sure I want to radiate so close to my head,(guess my cell phone doesn't count?!)
My Ipod is fun, but it would be nice to be able to turn it off and just talk...

I did see on one of these pages AB0XP has a tour easy, but he apparently does not advertise his email. Anybody know him or could pass along my email query to him?

Any ideas are welcome...either here or direct at kb2qqm@...
or kb2qqm@...

Its good to hear that there soon might be another person in the area
who is bicycle mobile (Im in Milwaukee). For my Greenspeed I have
made a bracket that clamps onto the rack which I think should work
fairly well with most recumbents. I havnt made any real drawings of
it but if you are going to be at Dayton Hamvention this weekend you
will be able to see what I have done at the meeting. Otherwise you
could show up for one of the GMRBC rides since I am the one scheduling
them (search Yahoo groups for GMRBC to get more details).

I have an easy tour, I put a mirror mount (5/8 stud mount) on the upper seat rail, it looks just like a flag stick and helps with the low visibility in traffic. Radiated power from the ht is not as much an issue as higher power would be. It works well with a dual band 2m, to 440 fire stick style antenna. I would not try a screwdriver hf antenna or anything heavy with the aluminum seat rails or high power directly behind your back and head.

1138. Antenna Source

Yahoo group: BMHA
Date: 2006-06-01 12:42:31 UTC
From: Bill
Topic: 1138 Message: 1138

I wanted to pass this information along as I sometimes see inquiries as to what everyone's using on thier bikes.

Yesterday I ordered a GBR-1 from Larsen, or rather what is now Radiall/Larsen.

This is one of the coax harnesses we use on GOBA, the week long Great Ohio Bicycle Adventure.

In writing this, I'm realizing it sounds like a commercial but please forgive me.

I have no connection with "Larsen" other than this:

When the GOBA Amateur Radio Operation was first organizing the communications effort for GOBA, some 18 years ago, we asked Larsen to help us with our unique applications as we felt they were the premiere mobile antennna company. They agreed and as a joint effort - they built and we tested various assemblies for bicycles: singles, tandems and recumbents. We also addressed fixed, portable and other mobile applications like ambulance installations. What resulted for bicycles was the GBR-1 and 2.

We did this for two reasons.

1. We wanted to have "rigs" that could withstand a week of emergency work (installing, removing, reinstalling, moving, replacing, putting up and taking down) for several years.

2. And, with respect to bicycle mobiles specifically, we wanted a standardized system that could be immediately replaced, on the run (pun intended), should any bicycle mobile need it.

The GBR-1 and 2 that resulted are tuned lengths of a Belden, special, stranded center conductor coax, the purpose of which is to connect a 2 meter radio to a half wave antenna on a bike, with the understanding that the radio would be carried, not attached to the bike but in a cycling jersey pocket thereby putting stress on both the connection and the coax because of continual movement. It has a NMO connector on one end and a BNC with a flexible sleeve at the other. The GBR-1 is for singles and the GBR-2 is for tandems and recumbents, the former being three quarter wave lengths long at 146.000 MHz and the latter being five.

We decided on the BNC for two reasons:

1. We wanted riders to be able to easily disconnect from the bike set-up and switch to a short antenna at an emergency scene, when the operator is away from the bike.

2. We wanted a quick release connector that would not stress a hand held antenna mount with repeated connecting and disconnecting. (Using a properly built adaptor, the new SMA connector is not stressed and I'd be happy to describe what we've developed should anyone be interested).

At that time, the price was around $20.

Yesterday, Wednesday, it was $21.90 plus shipping. Larsen will build and ship Monday and I'll have it when GOBA starts on the 17th in Xenia.

Here's the contact information (Denise will know exactly what you want as she's worked with us for years).

Thanks for the info. I currently don't do bike mobile .. but did for a long time when I used the bike to commute. I used the Larsen 2/70 dual band antenna successfully. I did try a half-wave but was dissapointed in the performance vs the 2/70 ... likely the special cable would have solved the poor performance.

1140. Re: [BMHA] Antenna Source

Yahoo group: BMHA
Date: 2006-06-01 13:09:12 UTC
From: Bill Sharp
Topic: 1138 Message: 1140

Richard,

That was one of the antennas we tested along with the 5/8 waves before we settled on the half wave.

Our constraints were 2 meters, 5 watts, 2 Ah 12 V external battery mounted on the antenna base (the article's in an old issue of CQ-VHF that you can get to from the BMHA home page, I believe), and omni-directional.

We had a grand time researching this for about 3 "seasons" before we decided.

We're now researching GPS tracking set-ups for the squads and bicycle mobiles.

Best,

Bill

Bill, Do you have a website for the GBR-1 Specs? I am having a hard time finding it on the Radiall/Larsen site.

Lynn,

. . . and you won't find it.

It is a custom application with a small target market, and as such doesn't rate catalog or website space, I'm afraid.

But, the specs are, (didn't I include them in the note?):

NMO K (large base to help prevent breakage, rather than other connectors)on one end with a plastic protective cover on the underside (hence the K designation) to deter water and dirt damage from the rear wheel (I also duct tape mine) and a BNC on the other end with a protective sleeve to deter a broken coax shield or center conductor.

The coax is special order Belden CX (at least it was the last time I ordered), stranded center conductor (again specific to this application where the "rig" gets a lot of on and off and flexing).

The length is 3 x 1/4 waves @ 146.000 for the GBR-1 and 5 x 1/4 wave lengths for the GBR-2 designed for bents and tandems. That's about 57" for the 3 x quarter wave length.

We also found that for our specific application, a half wave is superior to a 5/8 wave. There are lots of dual band vertical antennas around and as long as the specs for 2 meter portion turns out to be a half wave, you'll be fine. We recommend the Larsen NMO - 150 HW simply because it's physically longer than a dual bander.

If you'd care to, you can take a look at the CQ-VHF article about half way down the GOBA amateur radio web page, as well as other articles also about the half way mark.

You can infer from the above specs, we encountered just about every possible weak or weak point during our 3 years of research on this thing.

Pls let me know if I can answer any more questions for you. Glad you asked.

Stop by and say hello at the Medical RV, with the white flag with the red cross. All the folks running around in white are the docs, and there's lots of them. We'll be the ones sitting in chairs (mine is made out of a Texas flag) trying to figure out how we can get more antennas in the air.

Best,

Bill
The Older

P. S. Bill, the younger, has what's called, well, he'll tell you what it's called, counter poise for operating with a hand held and a rubber duck. He'll be happy to give you one as a thank you for bringing your radio. For me, I feel it doubles my output and increases reception when you've got your hand stretched up as high as it can go and you're using a speaker mike to talk because the talkie can't quite make the machine.

We feel that this is serious business, this keeping in touch with the squads for medical emergencies and it's disheartening to have an injured rider in the ditch and we can't hit the repeater (because we didn't do all we could).

1143. Bike mount ideas/pics needed

Yahoo group: BMHA
Date: 2006-06-06 01:50:16 UTC
From: hamaddict2001
Topic: 1143 Message: 1143

Hi folks,

I am biking again after several years absence and absolutely love it. Weve moved to a new location with some great trails.

One problem, I do not have a good idea on how to mount my Yaesu FT-817 on my mountain bike (an entry level Schwinn).

The bike has a front suspension, but no back suspension.

Ideally, I would like to mount a 108 inch whip on the rear of the bike on one of those little shelfs you can mount above the rear wheel. The rig would somehow go on the handlebars and some sort of hopefully auto tuner would go at the antenna base. Vertical or horizontal antennas for vhf/uhf would also be nice.

Any ideas on how to mount the ft817 on the almost completely straight bar handlebar of my mountain bike? The setup must be rock solid but the rig must be removable so I can still use it portable.

If you have any ideas, please be clear in your description and mention online sources if you know of them for any items you think I need.

Thanks so much for all your help and your time, and I hope to work all of you bike mobile soon!

73 de Tom, N2YTF

=======================

It must be "rock solid" ?? so that *every* bang, and bump is transmitted
fully to the rig? Sorry, I wouldn't do it if it were my rig.

Here's a shot of my 817 mounted on my 20-year-old Miyata.
http://www.n0lx.com/bicycle_mobile.html

I cut a plywood base, mounted it with strap aluminum brackets (1/8" x 1") and fixed with u-bolts to the bars. The wood is coated with Polyurethane. The bag was $2.00 at a garage sale and the rig rests on two layers of 2" stuffing foam from Hobby Lobby. Lots of cushoning.

From: patrick friend
Topic: 1143 Message: 1146

Use a RAM mount (just google RAM mount) and then some stiff foam padding between mount and rig to act as a damper to vibration. Then just strap it in place with a wide piece of velcro/nylon strapping with the foam providing resistance. Then just pull the strap or straps and remove the rig. Might have to glue the foam (closed-cell an inch or more in thickness - can get from a generic type 3 lifejacket or throw pillow very cheap around here - S Fla, USA)

Best,
patrick, W7VL/4

From: Ron Baran
Topic: 1143 Message: 1147

Hi Tom,

Welcome back to the trails. I went through the same process four years ago when I got into bike mobile. During the process I took a few pictures and put them up on my web site w9xs.us. I've been using the 706IIG "rock solid" on the handle bars for the last four years without a problem. A subsequent iteration of this station uses a tuner and 102" whip as an antenna mounted with a spring just as you mention. Just swap out the hamstick on the back of the pix.

Field Day from the bike anyone? This is probably the time to throw down the gauntlet to the august group.
73,

Ron, w9xs

Hi Tom, and welcome back.

I found a 1/4" thick aluminum plate that was roughly the same size as the FT-817 and mounted conduit hangers on one side. These attach to the handle bar. A cooler mounted on the rear rack served both to carry water and batteries. A Radio Shack CB mirror mount was bolted to the rear rack. I used both a 102" whip and Hamsticks as desired.

I used the standard mic with a mic hanger mounted on one of the conduir hanger bolts but a Heil Traveler would be my first choice.

I now have a recumbent and simply strap the Mountain Ops backpack behind the seat with a similar antenna setup.

1149. Re: [BMHA] Wireless Headset

Topic: 890 Message: 1149

I have a wireless bluetooth headset for music players, with the headset
and the sound device that has an 1/8" plug on it.
I tried it with my KX1 and it was stupendously bad. It has about a
150ms delay. I found it impossible to send CW with it.
I don't know about the phone devices; they might have less smaller
packets for their reduced audio bandwidth and thus less latency.
Or maybe the music player one is cost-optimized in some way that causes
the latency.
In any case, it really did not work for me.

I'm going to give this a try soon. I have a Jabbra device made for
cell phones that came with an adaptor for non-BT phones. I plan on
adapting it for use with my D-700, albeit without PTT on the earpiece
(there is a call pickup button available. The sound quality on this
device is not all that great, but there is no delay I can precieve.

I'll post my findings...

1151. Handsfree Bicycle Operating...

Yahoo group: BMHA
Date: 2006-06-13 17:55:50 UTC
From: Alan caldwell
Topic: 1151 Message: 1151

Hello everyone, greetings from Bonnie Scotland :-)

I am in the process of fitting my Yaesu FT-60 to my bicycle, I have the aerial mounted and cables run. I have a headset custom fit to my cycle helmet with one earpiece and boom mike. I have a handlebar carrier to hold the radio but I need some help/advice on something...

I am going to place a PTT button on the handlebars on the right hand side but I am not sure how to wire the button up for use with the FT-60. I intend to construct a small PTT box with 2 x 3.5mm jack sockets to accept the jack plugs on the headset. There will also be another connector to interface with the radio.

My question is, how do I wire up the PTT circuit? I assume the mic and ptt line is one and the same but I haven't a clue how to wire the button in the circuit to activate the PTT.

Any suggestions will be appreciated.

Cheers the noo...

Hello, I'm new to the group and I have a few of questions:

1. It looks like a number of people put their ft817 radios in a handlebar bag with lots of padding. Has this created any overheating problems for the radio?

2. Has anyone had problems with long antennas and clearances?

3. What kind of tuner are folks using?

4. How well do hamsticks work on a bicycle? The Superantenna MP1?

Thanks

I can't speak to the questions regarding the 817 (I use an Icom 703 when bike mobile), but I can say that Hamsticks are quite effective. Plus they're pretty inexpensive. They aren't terribly long, so there aren't many things I can't go under when I'm using them.

1156. RE: New Member with questions

Yahoo group: BMHA
Date: 2006-07-01 17:41:55 UTC
From: Bruce Thompson
Topic: 1156 Message: 1156

Hi Ken, welcome.

1. It looks like a number of people put their ft817 radios in a handlebar bag with lots of padding. Has this created any overheating problems for the radio?

I've not had any problems with overheating (I overheat before it does!) but it did install the temperature compensated oscillator in it since I felt it was drifting around a bit.

2. Has anyone had problems with long antennas and clearances?

Problems I have had are the fact that the trees around my house are always lower than the 13'-6" normal clearance. Also, on the bike paths that have pedestrian bridges, these are pretty low and the top whip bangs onto the metal grid roof. Kinda sounds like a bumper car connection! I just reach back and fold it over and its usually not a problem.

The biggest problem I have had is the top whip swinging back and forth wacking the tops of cars and SUVs as I peddle by. I fixed that with a small streamer at the top of the whip. Seemed to calm down the swaying and is much more stable when riding fast or in winds.

3. What kind of tuner are folks using?

I just use a hamstick and tune it for the bike. Works fine. Another local ham uses a shorted end-fed half wave dipole with a manual matching unit. I've looked at that and I think that is the way to go. It doesn't require a ground/radial system and the area of highest radiation is above your head, not down at the bike. He slopes this down at a 45 degree angle off the bike and can run 100 watts with it. He is much more successful with the downturn in the cycle (sorry for the pun!) than I am with the hamstick.

4. How well do hamsticks work on a bicycle? The Superantenna MP1?

I started out with the MP1 but the back and forth motion of the bike broke it. Too much moment arm for it to handle I guess. Went with hamsticks and have been pretty happy. They are cheap and work fine.

Thanks

No worries...

Thanks for answering Bruce, but now I have a new question:

Where can I find out more about the shorted ent-fed half wave dipole,
and the matching unit?

In the meantime, I think I will try some hamsticks, as I already own
several.

Bruce,

Can you provide any additional information on the "shorted end-fed half wave dipole" antenna??? Make and model???

Thanks
George

Ken, I am a neighbor of Bruce and use an endfed halfwave on my bike.
Here are some pages showing the setup:

http://www.n0lx.com/bicycle_mobile.html (with the 817)

http://www.n0lx.com/efhwa.html (shows the homebrew match)

http://www.n0lx.com/zl1aix.html (with the 706 and tuner - check out
the recorded audio from New Zealand using 20 watts on the bike)

http://www.n0lx.com/zl1aix.html (shows PTT button on handlebar)

I learned about the end fed halfwave from Paul, AA4XX. Of course, he
was using full-size wires, 33 feet tall, for 20 meters. Then Peter,
G0DZB, wrote to the HFpack group that he had made a shortened version
using loading coils.

Finally, the Oct. 2003 issue of QST ran an article on designing a
shortened antenna. It showed how to calculate the inductance needed to
reduce a halfwave any percentage and the resulting "L" based on where
you placed the coils.

My wire antenna is 13 feet tall, uses two small loading coils with taps
that give me 17 and 20 meters, and slopes back about 40 degrees to come
just under the 13.5' limit. We have lots of open space here in
Colorado, but I still have to watch out for low branches.

I am thinking of trying a setup where the last three feet or so will
bend back parallel to the ground. That will give me the clearance to go
under the pedestrian bridges and underpasses without having to stop and
pull down the antenna. I would only need this for the established bike
trails.

Here is the correct link to the PTT button I made up for the 706. It also shows the 2 meter colinear antenna I have tried.

The dilemma I have with 2 meters on the bike is this: My work schedule is 6 a.m. to 6 p.m. I very seldom find anyone on the radio at 5:15 in the morning - either simplex or repeaters - and by 6:00 that evening everyone is eating dinner and not on the radio here in Denver.

At least I can count on a few HF QSOs on the way home, and if I wound some coils for 40 meters, I could probably check in to a net in the morning.

Hi Jake,
I appreciate your problem.
I installed 2 meters on my bike and regardless of the time I use it
cannot raise anyone either. I can hit several repeaters but activity
is sorely lacking. I'm currently looking at putting 40 Meters SSB on
the bike and am working on a voltage end fed antenna which would not
require a counterpoise or ground plane.

Jim, please keep us uptodate how the voltage end fed antenna project
is working. I am interested in either 40 or 30 meter operation from
the recumbent bike.

Try calling on the Colorado Connection - In Denver you can hit it on
146.310 (-) with a 123Hz tone. I monitor in my truck all day and hear
folks on all day. The nice thing about the connection is that it gets
good coverage of most of the populated parts of the state. You can
find out more at www.colcon.org. If I'm near a radio when you call,
I'll be sure to answer, although the radio is still off at 5:00! :)

Hi, Scott,

I am in Livermore, CA. The recumbent is a discontinued brand, a Visions R-40. I bought it for next to nothing on a whim, thinking that if I liked the recumbent, I would upgrade to something better. While I am an avid bike rider, I have never tried a recumbent. Since I hold a Tech ticket, I will be sticking to VHF-UHF for now. I am studying for my General and hope to have that nailed by October and Pacificon, held here in the Bay Area.

I look forward to learning a lot from this group. When I start adding a radio to my bike, I will be sure to share my experiences.

Thanks,
Conrad Cox

There is some truth to that. I have a 2003 (2002?) Bike-E CT and it
didn't take me too long to get used to it when I wasn't driving. I used
a twin-lean J-Pole taped to the flag stick with a VX-1 to do bicycle
mobile... at least, until the coax got caught on the pedal and ripped
the connector off. Live and learn....

Hi Ken,

> Ken W3CAT wrote
> 1. It looks like a number of people put their ft817 radios in a
> handlebar bag with lots of padding. Has this created any overheating
> problems for the radio?

The FT-817 normally has no problem with overheating when used in bags and packs. Here are some photos of several highly successful HF Bike Mobile ops, including one of mine, using an FT-817 and SuperAntennas MP2 on a BikeE recumbent bike:

http://www.hflink.com/hfpack/moderators/#kq6xa

> 2. Has anyone had problems with long antennas and clearances?

It depends upon the tree branches where you ride. The longer the better... but there are limitations... 7ft-8ft is probably optimum. It helps to tilt the antenna backwards slightly, and to use sturdy mounting methods. Unlike vehicle mobile, the use of mobile mount springs can be counterproductive for Bike Mobile operation because the antenna tends to sway erratically back and forth when pedalling vigorously.

> 3. What kind of tuner are folks using?

Just about any lightweight small type of tuner will work fine. They are as varied as the number of bike mobile operators... but generally speaking, you are usually better off using a tuned whip antenna that does not require a tuner, if possible.

> 4. How well do hamsticks work on a bicycle? The Superantenna MP1?

I use hamsticks and they work fine, but limited to one band.

The Superantennas MP1 and MP2 are excellent for Bike Mobile, they are really much better suited to multi-band HF/VHF operation than hamsticks are.

1171. Disabled Vet looking for suggestions on a Recumbent Trike

Yahoo group: BMHA
Date: 2006-07-21 04:02:08 UTC
From: George J. Santa Cruz
Topic: 1171 Message: 1171

I am looking for your suggestions on a recumbent trike.

I currently have a Trek hybrid but nerve damage in my arms makes it difficult to ride for very long. I had planned to use the bike for cardio exercise, but the pressure on my arms and wrists and concomitant discomfort are resulting in minimal ride times on the bike.

I am considering the purchase of a recumbent trike which should (hopefully) take the pressure off my arms and allow me to ride for a longer period I am leaning toward the trike (vs a 2 wheel recumbent) as a more stable platform for an "HF bike mobile" platform. I believe that combining a more comfortable platform with ham radio will also lead to longer rides, since I have no riding companion.

I am interested in members experience with various makes/models of trikes and also your views on the dangers of riding a recumbent trike on the street. I am only planning to ride it in the local subdivisions on a daily basis, but am concerned about the very low profile of a trike. I don't need to get any more broken up I can easily do 20 mile daily rides without going out on a heavy traffic road. Longer weekly rides would be on a dedicated bike path that runs through the parish (a parish is Louisiana's version of a county).

After a lot of research on the Internet, my first choice would be a Greenspeed GTE, but fully outfitted would be almost $6K a significant sum to lay down sight unseen (especially on a fixed disability income), since there is no local dealer where I could test ride a Greespeed

The Catrike Road looks interesting not near the same level of options as a Greenspeed, but well under half the price of the Greenspeed Your thoughts/comments/ suggestions on these and other makes/models of trikes???

Another trike that looked interesting is the Sun EZ-3 USX (a delta design vs a tadpole) very reasonably priced, would seem to present a slightly higher profile, (would perhaps put you at eye level with drivers???) but weighs 65 pounds Does anyone have experience with a delta design trike (with under-seat steering) that is lighter in weight??? I would have difficulty loading a 65 pound trike by myself plus the weight of the radio and batteries...

My goal -- other than keeping my cardiologist happy -- is to get back to where I can ride a century again.

As for the radio part of this package, I have an Icom IC-706MKIIG with an AH-4 autotuner, that I plan to dedicate to "bicycle mobile". I am planning to power the radio from two SLA batteries in panniers. I also have the

separation cable and brackets for the 706 Thoughts/comments???

Thanks for taking the time to read this and for your comments and suggestions.

George

Also check out http://bike123.com/ . Larry Black, the owner of Mt. Airy and College Park Bicycles, both in MD, has quite an interest in non traditional bikes.

They also have tandems, folding bikes, unicycles, etc.

Topic: 1171 Message: 1174

George, i have the Sun EZ-3 SX (retail about $700) trike and am happy with it. Especially with the price, compared to other recumbents.

For the "low profile" you mentioned, i have a tall fiberglass pole with an orange flag & the American flag on it, which no doubt helps keep me visible.

I ride it around town; and part of my route home is on a dirt road which isn't recommended for these trikes but it's where i have to go. The derailleur hangs just inches above the ground, which means i have to be careful not to run over rocks or large potholes.

I have a 2m/440 ribbon j-pole taped to the fiberglass rod. Don't get a rod that has a metal joint in it, at least for vhf/uhf, as it may detune the antenna. Eventually i will make or buy a Hamstick or other short vertical, with a counterpoise wire trailing on the ground, to do HF, and mount it on the bike. (And i probably won't trail that wire behind me when i'm in town, in traffic !!)

As i recall the EZ-3-SX (hi-tensile steel) weighs 56 lbs. Then add several pounds to that (the behind-the-seat basket). The AX is only six pounds lighter. Several people have warned me against getting an aluminum-frame trike -- a two-wheeler aluminum might be OK, but that rear carriage gets stressed a lot, and if an aluminum weld cracks, it could be bloody hell re-welding it because of heat-treating issues. (Or maybe someone on BMHA has information contrary to what i've been told. If so, please comment.)

I'm not terribly worried about riding the trike on the street. But i don't think i want to take it out on the highway. I'd love to make a trip from Susanville CA here to Shingletown, maybe 80 miles distant, but that double-wide trike sticks out too far into the roadway and the shoulders of the roadway are DIRT, no fun to ride on. I'm not sure i'd even want to take a slender road bike on the highway for 80 miles. People do it all the time, and you PROBABLY won't get hit, but some years ago i met someone who got just about cremated while riding on a bike path IN TOWN and he really got crunched up. He can walk and work, but he's in constant pain all the time now.

My next recumbent, whenever that happens, is likely to be the Sun model that has two wheels, not 3, the rear wheel being 26" instead of 20", the front wheel 20" instead of 16", and a chrome-moly frame instead of high-tensile steel. It's retailing for just over $900 depending on the dealer...

I like my EZ-3 USX Trike I like the under the seat steering keeps your arms and hands more relaxed than the standard up right. Yes the Sun bicycles are cheaper than say Catrike but I'm a big man 300lbs 6ft tall. more expensive the bike it's lighter but like I said I don"t worry about speed. I ride anywhere from 50 to 150 miles a week, day, and night, city, and country only draw back yes they're heavy and long almost 7ft so if you have a small car you will need a trailer to haul it if you need too. I ride with a group from work the only recumbent in the group. We ride in a number of bike runs I'm always last to finish but I have alot of people who ask me about the Trike. I also like the Sun Tadpole if I ever sale mine I'll get the Tadpole it has two wheels in front and one in the rear. I hope this helps you. you should have enough onfo from all of us here to make a choice.

1178. Wireless headset?

Yahoo group: BMHA
Date: 2006-07-27 17:19:54 UTC
From: antennaguy2
Topic: 1178 Message: 1178

Does anyone use a wireless headset for their bike-mounted radio? I currently use a Telex "Stinger" wired headset with my HT and it works very good, except that I have to be tethered to the radio & bike to use it. I have looked at the Jabra A210 Bluetooth adaptor, but the Jabra techs tell me that I have to use a Jabra Bluetooth headset with it. It would be nice to adapt my Stinger to Bluetooth, if at all possible.

Sorry, can't help with that. I never used a "bike mounted radio". My radio
was always on my belt.
Tell me, how do you activate the PTT with your setup?

The PTT switch is inline with the headset cord on the Stinger. For a wireless or Bluetooth headset, I would make a separate PTT switch for handlebar mounting. If I was building this from scratch, I would add a tone burst or sub-audible tone that could be sent from the headset and a tone decoder to trigger the PTT in the Bluetooth adaptor box.

I've used a PTT switch mounted on the handlebar for use with my TH-D7. I currently use the wired Kenwood headset which I found works OK with a helmet. I, too, have been looking for a relatively inexpensive wireless headset that could be made to work with a TH-D7 or similar radio AND work OK with a helmet. Ideally it would permit a wired PTT switch to the radio so I could still use the handlebar mounted PTT but also have a PTT button on the headset for those times when I'm near but not on the bike.

Topic: 1178 Message: 1182

I have been doing extensive research on this subject and have the following options:

1. Bluetooth - Jabra A210 adaptor used with std. Bluetooth headset or BT headset with headband (search HelloDirect website)

2. Infrared Headset - may have a problem using in direct sunlight

3. FRS radios - Motorola RealTree RT210 $50 per pair, w/VOX, etc.
- replace antennas with resistor to limit range to 3 feet (legal??)

4. 49 MHz headset - same problem with legality (FCC rule 97.113(e))
- fewer features

5. PMR446 (FRS type radio from Europe) - 446 MHz 500 mW, but only available in Europe

6. LPD433 (FRS type from Euro) - 433-434 MHz 10 mW, but only available in Europe (PMR/LPD duo)

7. SRD860 (FRS type from Euro) - 860 MHz 5 mW, Euro only

8. Forget about a wireless headset and buy a new lightweight HT that fits in one of the cycling jersey pockets, then mount a whip on top of the helmet. (I'd fit right in for Dayton!)

Right now I am leaning towards # 3 with the antenna replaced by a resistor. (or install a small antenna switch) Use VOX on the headset radio w/PTT switch for HT on handlebars. Use VOX for reverse path to headset. (wind noise might give VOX problems when transmitting) Place one FRS in jersey side pocket & other in modified water bottle in cage. I would rather use #5 or #6, but not sure how to purchase this stateside. Any ideas??

Roger -
Not sure exactly why you need wireless only, but I abandoned the wireless approach for using my FT-817 on my recumbent in favor of the "in-ear" microphones that combines an earbud with a miniature accelerometer that picks up your voice via conduction. I bought it from some Asian outfit on eBay for about $40 and specified the Yaesu plug so it can also plug directly into my VX5R. Since I already had a Heil Traveler, I made a mating adapter cable with a 4-conductor inline jack so either headset is interchangable now with the FT-817. Audio from the ear-mic sounds good, and it leaves one ear (and part of the other) open for safety. And since there is only one thin cable and the ear-mic is easy on-off and doesn't interfere with my helmet, it met my objectives nicely without having to worry about maintaining another battery or two.

I would be concerned with those FRS units that operate in frequency bands for which they are not permitted in the USA, no matter how low the power!

Small HTs, such as the Yaesu VX-5 get very warm (actually, HOT) while keyed down. Be careful of burns to the arm! I have used my HT, mounted in an older cell-phone cradle, secured with a pant leg strap and a J-Pole antenna (made from twin-lead) fastened to a fiberglass flagpole. Best performance of all.

1185. Looking For Recumbent Info

Yahoo group: BMHA
Date: 2006-08-11 09:41:09 UTC
From: Lynn DeHart
Topic: 1185 Message: 1185

After reading Bob - W9RAN's recent post, I started to wonder just how many in the group have recumbent bikes. I am planning on getting my first bent soon after not riding for some 14 years. I believe the EZ-Sport is going to work for me.

Before any outlay of dollars, I would like to hear any suggestions the group may have. I am a 250 lb 64 year young ham that lives right at the connection of the C & O Canal Trail and the Great Allegheny Passage Rail-to-Trail. I have rented a EZ-Sport twice this summer. and I have fallen in love with bents.

Also I wonder what is the number of recumbent owners in this group. Might have been a poll question that I missed.

Tnx for any suggestions, Lynn - KB3FN

Lynn:

I don't have a recumbent now, but want one. I am leaning toward a short wheel base (and large wheel) bike. The Bacchetta or Rans has my interest for a light weight high performance bikes. But one thing I have learned is there are more recumbent options available than one would think. To help make sure you are aware of all the recumbent resources on the Internet, I will include a list of the links I have used in doing my research.

your weight is no problem on an EZ I am just short of 300 lbs and have ridden mine weekly for over two years.

something i can suggest especially for men or larger frame is a set of Knee savers they are machined studs that widen your crank and pedal set. this mod helps with tendon and nee problems associated with pedaling a crank set that is narrower than your hips and normal leg travel.

I've always had the romantic notion that if you take an HT on a long-distance tour, that you could get on local repeaters as you make your way along, and line up a place in the backyard of a friendly local ham for you to pitch your tent, or maybe even get a meal and a shower if fortunate.

What I'd like to know is, does this actually work in practice? Do you actually manage to QSO with hams who are willing to assist you?

You betcha!

I've ridden from Columbus to Chicago and back as well as to St. Louis and back 3 times and have had great experiences with helpful hams all along the way.

Most couldn't believe I was bicycle mobile and had to see for themselves.

Sometimes, I was invited home for a great dinner and bed and, of course, met wonderful families.

At other times, I got terrific recommendations for good places to eat and get a "cheap" room for the night.

On one occasion, I was invited to breakfast with the town fathers in the back room of a restaurant. I was as odd to them as they were to me. It was just great fun to be in a jersey and bibs and sitting with the suits of the town.

Life is good on the road with a 2 meter rig.

Venture out!

Go do it.

Best,

Bill

That's a great list Bret. Recumbents and trikes are a hotbed of innovation, literally hundreds of designs to choose from, plus lots of freedom to customize to suit your own taste and needs. And like this group, 'bent riders are by and large a helpful and enthusiastic bunch that will go out of their way to lend a hand or offer suggestions.

Let me add one more resource: http://www.bentrideronline.com/ You'll find loads of reviews and reference materials, then join the forum and fire away with any questions you may have.

I met several hams at the Midwest Recumbent Rally in Stevens Point WI last weekend, including a slick trike setup with APRS and solar battery charger. I took my FT-817 and hamstick along but never did put it on the bike - I was too busy riding ;-) 'Bents offer the cycling ham a couple of advantages - a more relaxed operating position, and at least with the longer frames, enough counterpoise to radiate effectively, at least on 20 meters an up.

Lynn,

I ride a Trek R-200 recumbent. No longer made, but still available on the used market (i.e. eBay). Haven't done any bike mobile hamming on the bent, but did on the "old-fashioned" safety bicycle(s)! Rig has been a 2M handheld (FT-530), on 12 volt gel-cell with a homemade 300 ohm twin lead J-pole attached to a fiberglass bike flag pole.

I have a recumbent myself. It's a 2002 BikeE CT, and I've not ridden it for a few months because I need to replace the front shift cable. I haven't had time to repair it since we moved, but I'm hoping to have it ready sometime this fall.

Another 'bent rider here.

I have a Bacchetta Strada (2003 model) that is the high performance steed of my stable...I've not considered operating ham on this bike--yet.

I also have a Cycle Genius (Sparrow is the closest to the model I have) that is a good "city" bike. Feet are closer to the ground than a high bottom bracket (high-racer) style bike. The CG could be comparable to the EZ-Sport. This would be the bike for ham ops for me.

Also have an EZ-Tandem. This would be a good bike for the stoker to operate radios while I focus on driving it.

I didnt realize you were at the rally...That makes 5 hams that I know of who made it there. I also had my radio with me but didnt bother setting it up for the same reason you didnt. Too busy riding and talking to the people there :)

I also met those 2 hams with the delta trikes. They were there last year too. At this rate perhaps the BMHA should make the rally as an unofficial meeting place for those of us in the WI region.

Hi Stephen,

Sounds good! Having an excuse to play radio would be fun and a good way to demonstrate ham radio to other cyclists. In fact, wouldn't it be cool to have someone on the rides with APRS and a PC back at the rally showing their track in real time.

I hope this diversion into recumbents isn't too boring to our DF friends or others. Hate to admit it, but the 'bent riding population and the ham population are about the same shade of "gray" - maybe this is a way to get more younger cyclists AND hams excited about this unique combination of hobbies.

You are welcome to join this much needed Yahoo Group.

This is a group that Sun EZ-Sport aficionados can share all the pluses and those few minuses of this fine cycle.

This forum is for the sharing of ideas of modifications, add-ons, accessories and interesting rides that may be of help to others

The retro styling of the EZ Sport brings back the nostalgia of the 50's and 60's combined with excellent handling and maneuverability and may be the most user-friendly of all recumbents.

I took it that the EZ-Sport group was directed toward owners of EZ-Sport bikes, and their three-wheeled cousins, rather than as competition with this group. If an EZ owner happens to be a ham so much the better. I hope that group generates more posts there than it has here!

1206. Kenwood D7A bicycle help

Yahoo group: BMHA
Date: 2006-09-17 22:17:15 UTC
From: Stan
Topic: 1206 Message: 1206

Last month I purchased a nifty Trek 7300 comfort/hybrid bicycle from the local bike shop. With the rising gas prices and wanting some exercise, I decided a bike was the way to go. I have a pretty short 1.5 mile one-way trip to work, so it's really not too shabby. Since I've been riding, I've missed my ham radio activities. My car has a old 25w - 2m mobile rig attached to a Tinytrak 3 tracker unit which works really well for APRS. Last week I decided to purchase a Garmin GPS 60CSX GPS unit and Kenwood D7A for my bike. (I could have went cheaper with the GPS, but I wanted a unit I could use for other activities as well as getting the very sensitive Sirf3 chipset.) I found an interface cable to connect the two devices together as well as a ram mount for the D7A.

Click here for a picture of the GPS and D7A mounted on the bike.
<http://www.k9swx.com/misc/CRW_1514.jpg>

As you can see, the HT points almost horizontal which is probably not helping my cause. I decided to order a Diamond SRH77CA dual band HT antenna which has received alot of good reviews online. It does seem to be better than the stock antenna, but I've yet to get into the local digi or fill-in digis on my 10-min trek to/from work. I'm wondering if I should pick up an SMA right-angle adapter so the antenna would be in a more vertical position? (something like this
<http://www.mpja.com/productview.asp?product=11842+RC>)

Is anyone else successfully using a D7A on their bike to get into the local digipeaters? (that is without using an external 10ft antenna on the back of their bike!) ;) If so, what kind of setup are you using? Thanks!! 73..

Stan, K9SWX

Stan,

You have done a fine job mounting. It looks very impressive.

If you're in a metro area there may be lot of competition with more power than you have--not saying you can't hit a digi with your signal. But you'll loose (or is it lose) one or two DBs if you use a 90 degree connector. I think it's too big a price to pay when you have limited power. I would add a little more coax so you can make a nice smooth curve back to the radio.

With both a new radio and antenna, you may want to increase the beacon rate, at least until you're satisfied you're hitting the box.

My QTH is north of Dallas 27 miles and sometimes there are as many as 100 stations competing for a digi. I use a Tiny Tracker and an ancient Radio Shack HT 202 with 5 watts to an the antenna. It seems to work. It's N7NET-6.

Stan,
When I ride my recumbent I routinely use my D7ag/Fortrex to access digi's in Chicago's far north 'burbs. I have a mirror antenna mount on the top of my seat back with an NMO mount for various dual band antennas. I prefer my Larson but have used a Comet as well.. I carry both in a backpack that is attached to the seat back as well.

Stan, a couple of points to consider:

1) Yes, changing the antenna to vertical will make a significant improvement in your signal. Unless you could convince the digi owner to switch his antenna over to horizontal . Nah, just move yours!

2) How far away is the digi? If it□s more than 5-8 miles, you□re going to have a tough time getting into it with just a rubber duck, especially if it□s a busy digi. My local digi is only about 6 miles away, but it hears my HT only about 10% of the time. Due to all the other traffic it□s hearing, my 5 watts has a tough time getting in.

3) You may want to consider putting a ½ wave roll-up J-pole on the bike (or another ½ wave style antenna). I have one mounted on a bike flag pole. It waves back and forth some during hard climbs, but it works wonders for my signal.

Thanks for the kind words! Everyone has always recommended the ram mounts so that's what I got for the HT. The GPS is just using the Garmin handlebar mount which seems pretty secure.

> If you're in a metro area there may be lot of

Yeah, I need every ounce of signal I can get out with just 5w. I figured adding another connector would cause increased loss.

> With both a new radio and antenna, you may want to
> increase the beacon rate, at least until you're
> satisfied you're hitting the box.

I've got it on the 2-min beacon rate at the moment, though I guess trying 1-min wouldn't be too bad just to experiment with. I just don't want to cause any interference to other stations by beaconing so much.

> My QTH is north of Dallas 27 miles and sometimes there

What sort of antenna do you have for that tracker? I started off with an old Icom 2AT for the car which was ok until I got out of town, then the 1.5w just wasn't enough. ;) Now the car is on a 25w mobile which seems to do pretty well. Thanks for the info! 73..

LOL, I don't think that is going to happen. With the ram mount being so easily adjusted, I will try different positions and see if any yield better results. I think I now understand the one D7A which was mounted on the front side of the handlebars, the antenna was pointing straight up in the air. I guess I could always throw it in the back bag too, though the GPS cable isn't long enough to reach that far. :)

> 2) How far away is the digi? If it's more than 5-8 miles,

From the home QTH it's 6.3 miles to the north. Of course my work QTH is south of there, so that doesn't help my cause. I figured one of the fill-in home stations would hear me and send me to the I-gate, but that hasn't happened yet.

> 3) You may want to consider putting a ½ wave roll-up J-pole
> on the bike (or another ½ wave style antenna). I have one

Yeah, that is my next option. My only concern (other than spending more $$$) is breaking it when getting on/off the bike. I was considering using the same antenna that I have on my car (Comet CA2X4SR) since it's 1/2wave on both 2m and 70cm, but it's not a whip so it might snap or take some abuse from low-hanging tree branches when riding on sidewalks. I guess I could settle for a 2m only whip and switch to the HT antenna if I wanted to do 70cm. Or I could build something away from the rack that gives me enough clearance so my clumsy feet wouldn't hit the antenna when getting on/off the bike. Lot of options, just need to find the right one for my situation. :)

Thanks for the info, 73!

Hi Stan,

The YL and I are crowding 70, so we don't ride as hard or as far as we once did. We ride a Burley Samba, and pull a Bike Friday cargo trailer with a small Action Packer bolted to the frame. I flush mounted an old 5/8 vertical to the lid.

We live about 2 miles from a Neighborhood WalMart, so we go there for milk and bread. Our daughter can check Findu and see where we are.

Saturday I slipped the tiny trak into my pickup and went to a storage facility north of our QTH. I cut the power while I was there, and that's why N7NET-6 is where it is.

Ride safe,

Scott

Stan,

What is the mount that you are using to hold the HT. I currently use a old RS bike holder with a built in bungee for my TH79a but it is starting to wear out. If you go to the Files section on the Yahoo Group you can see several photos of my bike and the mounting. Keep in mind that ground independent antenna is best for a bicycle.

I posted my pix of my TM-D700 bag mounted on the back of my road bike, but I also used the same antenna with my D7. You get a few strange looks, but the silver antenna (Diamond NR-770HA) looks OK and it works like a champ. The mount is a stick on mount from Diamond, with a UHF connector, and a long piece of RG-174. It also terminates in a SMA connector which works great with an HT.

When hiking or skiing, I use an old MFJ antenna simular to the one you are looking at for bike mobile. I tried it for a while on the bike with the D7 without much success.

Most of the time, I think the problem was picket fencing while moving. The little bit of gain with the NR-770 must make a big difference.

Holy cow, a D700A on a bike! That's awesome!! :) That antenna looks nice on the back, what mount is it? Also, do you have any issues hitting the antenna with your feet when getting on/off the bike?

> When hiking or skiing, I use an old MFJ antenna simular to the one you
> are looking at for bike mobile. I tried it for a while on the bike
> with the D7 without much success.

Yeah, I tried again this morning in the 40 degree ride to work with 1-min transmission rates. I didn't make it in once, very frustrating. Last night I stood on my patio holding the HT straight up and down and was able to make it in several times, so at least if I'm standing still I can hit it. I think the only way will be to go with an external antenna.

> Most of the time, I think the problem was picket fencing while moving.
> The little bit of gain with the NR-770 must make a big difference.

That's not a bad looking antenna. I'd be torn on whether to get that one or spend $10 more and get the Comet CA2X4SR like I use on my car. The only difference I really see is that the NR-770 is 1/2 on 2m & 5/8 on 70cm whereas the CA2X4SR is 1/2 on 2m and 1/2 on 70cm. Either one would probably be just fine for APRS usage on 2m. The mount I was looking at getting would be the Diamond K540KM which should fit on my rack on the back.

Thanks for the info! 73..

I took this approach, too. I ended up with a Comet SBB-25 on a homebrew mount attached to my Jandd Expedition rack and find that it works quite well. It's a bit long, though (56"), and yes, once I broke it while mounting. Other than that it's served me well. I mostly use it while commuting. Since I store my bike in the building at work I use the fold-over feature (which most mobile antennas have these days) to make it a bit easier to get it in and out of the building.

Yeah, that one is a tad long and it only does 2m. (though that's
probably all I'd really need for APRS) I'm curious to find out what
model # mounts that other's are using. I don't want to buy the wrong one
for my bike and be stuck with a $60-70 useless mount. :) Thanks for the
info, 73!

From: Barry Bogart
Topic: 1220 Message: 1220

I disagree - the standard Garmin handlebar mount is
NOT very secure. I have had two eTrex's and one Rino
tossed to the pavement (both survived). Now I always
tether the unit to the handlebar and use even use a
cable tie around the mount AND handlebar when I expect
on rough roads.

BTW my D7 mount is merely a hose clamp around the top
tube, just behind the stem. It goes through the belt
loop on Kenwood's nylon D7 case.

Topic: 1206 Message: 1221

Well I couldn't take it anymore and decided to order an external antenna and mount for my bike. I chose the Diamond K540KM mirror mount which goes on the back of the rack. The antenna is a Comet CA2X4SR which is a 1/2 wave 3.8db gain on 2m and 1/2 wave 6.2db gain on 70cm. It showed up yesterday and I wanted to wait to get home to install it. Unfortunately I could only get the mount in the bag on the bike, so the antenna had to stay at work. However, I have the same model antenna on the car so I decided to just put that one on the bike and put the new one on the car.

So after spending about an hour and a half installing the antenna and running the coax on the bike, I flipped on the GPS and D7A. I hit the beacon button and all of a sudden it beeped and said 'my position'!! I did it again just for kicks and got right in again. I rode around the block and got in several times, even my status text of 'bicycle mobile' made it in! Talk about an excited puppy! I was also able to key up several 70cm repeaters 30-40 miles away, so that was sweet too. I guess all I need to do now is look into an external battery that will allow me to power the D7A for awhile so I can bypass the internal battery. I'll work on that next year. ;) I'm just happy to have something that actually works now on the bike.

Unfortunately the weather was too crappy today to ride to work (calling for severe storms with tornadoes), so hopefully next week I can ride a few days before it gets too cold. Thanks to all for the help along the way, I greatly appreciate it. I will take some pictures next week for those interested. 73!

W3FF here. Been a ham forever it seems.....since 1954. And have been playing with portable antennas for quite some time now.

Recently my son purchased a recumbent trike for me for HF'ing, and it's up and running. It's a Lightfoot Cycle from MT.

Any chance of a sked with any of the HF bike mobile guys? Is there a frequency that is more active than other frequencies, say on 17 or 20 or 40 Meters, CW or SSB? Right now the HFPack frequencies of 18157.5 Khz and 14342.5 Khz are where you will find me daily. But what a hoot on 60 Meters.....lots of consistent Q's from this Northern CA location. 5371.5 Khz.

Thanks for letting me in the group.

Budd

Welcome Budd.

Now you know why a recumbent biker always has a smile on his face. You will have to try the
new http://www.atatrail.org/ when are back home in Western PA.

BTW folks, if you didn't recognize W3FF, Buff is the inventor-supplier of the very popular Buddipole antenna system.
As well, he is a great guy. It is good to see that he is moving up from golf carts to recumbent bikes.

Budd,

Great to see you are on a recumbent trike. I hope you like it as much as mine which is a Trice XLNT. I am capable of HF on the trike, just need to see which antenna to use. I prefer to use a setup that is true Tricycle mobile, i.e. being able to ride and transmit at the same time. Don't have to ride far but at least be a true mobile.

My guess is that 17 meters is best and I will start listening this weekend to see how propation is between Nebraska and California.

Is there a time you prefer to give it a try? I unfortunately still work 8-5 M-F Central time but can be free any weekend. I am also available over the Thanksgiving Holiday including that Friday.

I don't know if this would be the first trike-trike contact but it is, so much the better.

From: W3FF@aol.com
Topic: 1226 Message: 1226

Guys, thanks for the quick response to my post on being a new member.

I'm active daily from the trike. Normally on 18157.5 Khz and 14342.5 Khz. But in the early evenings, just at dusk, when it's not raining, there is a lot of activity on 60 Meters, and that's the band of choice. 5371.5 Khz USB of course.

Last night in a quick ride, New Mexico, MT, CA and UT were worked from Northern CA, I heard TX and KS stations, but did not get answers from them. I have heard one G station from my previous mountain bike setup, but he was working the USA East Coast.

This weekend, on Saturday, it is predicted to be clear, so I'll charge up the AGM battery and take off to my favorite haunt, a walking/biking preserve about a mile and a half from home.

Ron Baran, W9XS, and I have had bike to bike Q's in the past. He's the most active HFPack bike mobile I have encountered. When I get on the bands, his call comes up the most. Joe, W5SAN, has been on the air for years from TX, of course, and is on the Steering Committee for HFPack. Rem, K6BBQ, is a friend and HFPacker, but we are too close (200 miles) to make Q's on the HF Bands.

I'm a ham first. You guys are head and shoulders above me and my riding skills. The trike makes it very comfortable and convenient to enjoy both hobbies.

Mike, when is the BMHA presentation at Dayton this year? I never got away from my son's antenna biz to make it in 2006. Didn't see even one seminar.

Budd

1227. Increasing bike mobile activity across the country

Yahoo group: BMHA
Date: 2006-11-17 19:25:40 UTC
From: 3 wheel BBQ Piggy
Topic: 1227 Message: 1227

Hi,

I have been on this list for a year or two. I have never been to Dayton but understand you have your annual
gathering there. That seems like a great way for members to get together.

However, I notice the online activity isn't large.

I would like to see what hams here think about BMHA starting regional chapters across the country.

I live north of San Francisco but south of Sacramento, so I would like to start a Marin County BMHA chapter.
Someone in San Francisco could start a chapter there, and likewise in Sacramento, etc.

Hopefully with a local bike mobile group, more hams may be convinced to get active in bike/mobile.

What does everyone think about this?

Can you give us a green light to do this?

Hey Budd,

Welcome aboard. I, too, am a recumbent rider (Easy Racers Sport) and I love it. Currently I am bicycle mobile on VHF, although I am HF capable. Now that I have a new camera, I will soon upload pictures. Welcome aboard and best of 73!

Rem,

That sound great to me, let's go for it. There are some members of BMHA in California, in fact our Webmaster is from Sunnyvale

Anything that spurs activity on this site and the BMHA website is welcomed.

Let us know about any activity and be sure to get in an upcoming web newsletter. Some changes to BMHA are coming and your new chapter news could be a part of this.

1230. My First HF Tricycle Mobile Contact

Yahoo group: BMHA
Date: 2006-11-28 23:06:05 UTC
From: nf0n
Topic: 1230 Message: 1230

On November 18th I made my first ever HF Tricycle Mobile contact. I called CQ for 5-10 minutes on 18.157.5 and KM4P answered me and I was really surprised. My thanks for his patience as I was probably pretty weak but he stayed with me and responded for several minutes in a QSO with me. Yes, I am excited as this is my first QSO on HF with the Trice XLNT tricycle although I have made other bicycle and recumbent cycle contacts. My antenna is just a Diamond HF mobile antenna and rig is the FT-817 with a Heil headset. I was in Omaha, Nebraska for an appointment and had ridden 50 miles on their fine trails and made the contact after the ride. I put the antenna and mounted the rig in the parking lot of the trail head and called CQ with the response from Bill.

If weather is halfway decent this weekend I will try again from one of the roads or trails here in South Sioux City, Nebraska. Listen for me on 18.157.5 in the afternoon between football games. If you hear me at all give me at least a report. This may be catching if I don't watch out.

Are there any other Tricycle mobiles out there that would like a contact or make a schedule for an HF contact?

```````````````````````````````````````````````````````

I am ready ! Post here before you go out on your ride. I will take my trike and join you. Am looking forward to it.

Good show on the Q with my buddy Bill in Florida. He and son Chris and I are good friends. We started with the homebrew dipole and he became an expert in making them there at his home. Bill then went on to teach kids about ham radio. He uses the little dipole to explain how antennas work.

AND congratulations on that contact. What a hoot. Wish I would have been monitoring. GOOD show.

Now we're heating up !

Rem.....Ron.....can you guys consider a sked?

1234. OT choices?

Yahoo group: BMHA
Date: 2006-12-18 22:12:39 UTC
From: dazcaz
Topic: 1234 Message: 1234

Hi gang... I don't know where else to ask, so as you are all cyclists
I thought that I'd ask here...

I've just had my 2006 Specialized Sirrus Sports Disc stolen.... It's
really p****d me off!
The insurance company have two bikes to offer me.

1) Specialized Sirrus Elite
2) Giant CRS 1.0

They are both similar spec, both hybrids. The giant leans towards the
mountain bike side, the Specialized toward the road side.
The Giant is probably higher spec (slightly) but it's components are
designed for off road.

The bike is my main form of transport. I only use the car when the
bike would be too impractical. Passengers etc :)
Daily 3 mile each way commute to work.
Tons of milage around the city just for fun/excersize.
A bit of track and trail with the family on weekends.

I do have another older bike which is geared more towards the ATB
side, but it's still very much a commuter bike.

Whichever bike is chosen it will have a rear rack fitted for Luggage
and antenna.

I'm leaning towards the Specialized, as it was a Specialized bike that
it's replacing. I'm not sure that I like the Giant's fatter tubing.
It took me monts to decide which bike to buy, now I have to make the
decision again. The CRS 1.0 was on the short list last time.
According to the Specialized website, the Elite is one model up from
the Sports disc. Neither of the new options have discs. The old bike's
disc were Avid 5 cable.

What do you guys think?
Do you know any bike review forums I could ask on?
I need to decide soon as the faster I inform the insurance company of
my decision, the faster I get my new bike.

Thanks for allowing my OT question.

Thanks for the replies sent direct. Much appreciated.

As I was dithering, the company dealing with my insurance claim phoned me to say that had in stock A 2007 specialized Sirrus Comp.
This bike is 2 notches up the scale to my stolen bike.
They said that I could have it for and extra 50 quid on top of my 100 quid excess.
They also said that they could deliver it before christmas.
It arrived today!!! :)
It's a cracking it of kit. Carbon fibre forks, seat stay and seat post, superb wheels, Silky smooth SRAM cassette... A really nice bit of kit and a large improvement over my stolen bike. It even came with the Topeak rack fitted as I had a Topeak MTX bag , and a new Specialized Turbo Elite computer, as I had lost the bracket for my old one.. I had the computer but no bracket.

I'm really pleased. I'd go as far to say that the thief has done me a favour. I've got a far better bike, lots of goodies, a great lock (thrown in for free) and I'll be having a very happy christmas!

This new bike is black too so coax cables will be less visable :)
I'll have to check that the rear rack is bolted to metal and not CF before fitting antennas :)

Thanks again for all the input to my original post.

I hope this isn't old news ... 'did a search and no matches showed up.
I just ordered a 13.2V, 5AH NiMH battery pack from
www.batteryspace.com. The pack is built into a 700 ml bottle that fits
into a standard bottle cage. With AC smart charger, in-line
fuse/breaker, 4-foot coil cord, and battery temperature sensor
(for the charger) it came to $70. Their part no. is CHUN-168C09.

Now if I can defrost that FT-817 ...

Did the product state the discharge rate that resulted in this A-H rating? these manufacturers will do most anything to demonstrate their "numbers".

Did the product state the discharge rate that resulted in this A-H rating? these manufacturers will do most anything to demonstrate their "numbers".

1241. Re: Water Bottle Battery

Yahoo group: BMHA
Date: 2007-02-02 13:08:37 UTC
From: w9jwt
Topic: 1238 Message: 1241

Harry, the batteries are built for bike headlights. The only
discharge info they give is as follows:

13 Watts 5.0 hrs
15 Watts 4.0 hrs
10 Watts 6.5 hrs

I don't know if that is tested or just calculated based on the cell
ratings. The batteries are constructed from 11 1.2V
5000mA "Powerizer" (tabbed) NiMH C cells. The in-line fuse
(polyswitch) is rated at 7 Amps.

Their site list many other batteries (NiMN, NiCd, Li-Ion) and many
sizes of individual cells. And chargers and dischargers. And other
neat stuff. (Nope, I don't work for 'em! I just liked the idea of
the water bottle packaging.)

1242. Announcing the 17th Annual Dayton Hamvention BMHA Forum

Yahoo group: BMHA
Date: 2007-02-08 01:15:13 UTC
From: Mike Nickolaus
Topic: 1242 Message: 1242

Dayton Hamvention 2007 BMHA Forum

The 17th Annual BMHA (Bicycle Mobile Hams of America) forum will be held at the Dayton Hamvention on Sunday May 20th, 2007. Russ Dwarshuis, KB8U, will be forum moderator and speaker.

Our special Guest speaker is:

Budd Drummond, W3FF. Budd is well known for Buddipole Antennas, a manufacturer of lightweight, versatile hf portable dipole antenna and vertical antenna systems for amateur radio.

Other speakers are Russ Dwarshuis, KB8U and Norm Huber, N9ZKS.

Room details and forum time will be posted on the BMHA website: www.lafetra.com/bmha and the BMHA Yahoo Group as they become available.

1243. Dayton 2007 BMHA Forum Times

Yahoo group: BMHA
Date: 2007-03-01 02:46:22 UTC
From: Mike Nickolaus
Topic: 1243 Message: 1243

It's official, we have been confirmed.

Date: May 20, 2007
Time: 8:15-10:00 am
Room: 2

As announced earlier, our featured speaker is Budd, W3FF, who will be showing pictures of bicycle mobile setups including his own.

Budd would welcome pictures and a short writeup of your bicycle mobile setup. He will select as many as he can for the forum. Send your picture(s) and short writeup to w3ff@... and copy me at nf0n@.... Along with Budd showing these pictures at the Forum, I would like to include them in a future BMHA Newsletter. It might be good to confirm your permission to use your pictures.

Mike, NF0N
BMHA Secretary/Treasurer

Motorcycle batteries are a convenient size and not too heavy, but they don't hold up well. Like a car battery, they don't like being discharged more than 20%.

Then there's the acid issue. One spill and you've ruined everything you own.

You haven't stated what you're trying to power--APRS, CW, 2-meter? Eight high quality D cells will provide good power for a QRP rig. Radio Shack sells D cell battery holders at a good price. Two four-cell holders zip-tied back-to-back make a tidy pack that will provide power for awhile.

I'd stay away from a wet cell motorcycle battery for safety reasons. It will leak the battery acid if it gets turned over. Instead, I'd suggest a gel cell (sealed) battery. No worries if it gets turned over.

And the capacity is just not sufficient to run an HF station for longer rides. Consider looking at the site of "Batteryspace.com". Just Google it. Lots of choices. For a recent trip to VP2M, I took two of their battery packs with me. They are about five pounds each. NIMH hi capacity D cells. Eleven of them. When the pack is fully charged, 15 volts is what is measured. My FT-857D loves the results. 11 A/H. I rented a bike there and had great success with HF contacts. You can see a picture of it here: _www.w3ff.us_ (http://www.w3ff.us) Just scroll down to the bike picture. This Batteryspace pack fit in the water bottle bracket just below the handlebars. I simply kept one on charge all the time at the home villa, and used the one on the bike to run 50 watts SSB for hours at a time. Budd

I use one at work for jumping off cars. While they would work for powering radios, I'd suggest using just a 12 volt battery. The jump kits have a lot of extra weight (for the case, jumper cables, air compressor, etc) that you really don't need. Plus, the battery inside isn't all that powerful (usually).

To add to what W3FF Budd said, you don't want to use a motorcycle
battery -- because motorcycle batteries (as far as i know) are
starting batteries, not deep-cycle batteries. You will damage the
battery quite quickly by discharging and recharging it repeatedly.
Starting batteries are meant to be kept topped off all the time.

I agree with Sam.
I used to use a motorbike battery back in my CB days (80's).
I had one crack, and drip electrolyte down the frame. Before I noticed
the damage was done.
I had to respray the bike. Luckilly it wasn't an expensive bike, and I
resprayed it metalic gold which was real cool back then :)

Stick with a gel cell.

Those jump starter things are handy to have, but a bit bulky for the
bike. Here in the UK we have bargain basement shops that sell them
really cheap... Buy one and take the battery out :)

From: George
Topic: 1244 Message: 1252

Hi af4ob,

Perhaps the first thing you need to do is determine how much power you need. This will depend upon what transeiver you are using. For example an ATS 3 CW 4 band transeiver at 5 watts draws very little power on standby and receive and will work happily on a battery pack with a series of AA batteries. Rechargable NiMH's could be a light cost effective battery.

Electraft radios do not draw much power. An Icom 703 at 5 watts and 706 at 100 watts will drain a 7AH gel battery in a few hours on standby/receive. -- quicker at 100 watts transmission.

The specs on your radio should provide information on what it draws on receive/standby.

Here are some useful links:
http://www.powerportstore.com/dc_power.htm
http://www.powerstream.com/dc2.htm
http://www.eham.net/reviews/detail/4758
http://kd1jv.qrpradio.com/
http://www.elecraft.com/

I was interested in power for backback/portable operations and developed a spreadsheet to compare power consumption and battery duration for various radios I was interested in. I posted this on the hpack3 yahoo group site which is a subsite of hpack yahoo group.
http://groups.yahoo.com/group/hfpack3/files/
"Portable - Power vs Duration.xls"

If you don't have MS Office, there is a free office suite that reads xls spreadsheets. http://www.openoffice.org/

Sam,

I can hear her echos all the way into North Texas.

-My bikes are:

Cannondale with 700C
Bike Friday with 24"
Burley Samba Tandem we've owned since 1995

Barb, KC7BSY, and I have had some fun on the last two. We've been to
Grand Canyon, rode Missouri's Katy Trail, rode into
Sonora, Mexico and many times across Arizona's Sonoran
Desert--2-meters and phone booths our only
communications.

Barb supported me with a pickup camper while I pedaled
the BF from Yuma nearly to El Paso four years ago.
Last year I shipped it to Spokane and pedaled into
Idaho with KE7EZM.

In April or May I'll take the CB-900C from Dallas to
Pie Town NM with APRS, 2-meters, and 20-meters. We
own some property just outside Pie Town. I like to
toss a dipole into a juniper and work 20-meters from
up there.

Funny you should ask...

I've come to the realization that for all the good intentions, life and time marches on. There's too many great adventures waiting "out there" to restrict ones self to pedal power.

I've discovered what might be a good compromise. There's a whole world of "scooters" which seems to be a good cross between the seeing (and feeling) all the sights of the bicycle world and the zoom zoom of the petro fueled jet age. Vespa's appear to be at the top of the pack and there are even electric versions such as the eVader (in a local battery store) or even the eGo cycles. I'm not sure yet where this is going to go this year but with a 13 mile one way commute and unquenched thirst for road time -- I bet something is going to show up this year. When it does -- it'll have ham radio for sure. VHF and APRS at the least. I'll probably also eventually figure out a mount for the new FT817 for those longer rides in the islands.

Good deal on putting HF on your bike, Ron. I much prefer HF to local 2 meter chat on the bike and have had some success with "pedaling and propagation." Unless I missed it in a previous post, would you mind elaborating on your setup? Are you tuning up a single Hamstick on different bands?

I'm an avid QRP'er, but on the bike with a compromized antenna, I have "cheated" a couple times by running 20 watts. Here is a typical setup and info on my New Zealand QSO from Colorado:
http://www.n0lx.com/zl1aix.html

And my original FT-817 setup:
http://www.n0lx.com/bicycle_mobile.html

Not sure who's post you are responding to Jake - you deleted the original - like they ask you to - and then you confuse the simple minded among us. :-)

I finally destroyed my 102" steel whip and switched to whatever was laying around. In this case it was a 20 mtr hamstick. I'm using an AH-4 tuner to match whatever antenna de jour that ends up on the back of the bike. From my perspective they all work about the same; equally poor. But a few more sun spots and we'll be hot stuff again.

I do about 99% of my operating from the bike while in motion. I just went back and found out that I started HF bike mobile in September of 2002 - so there's an anniversary coming up. I'm listed at MFJ.

Operated 2006 FD Class 1C and managed a 3rd place finish. All CW, all in motion on the bike. Epsom salts belong in every bike mobile emergency kit.

http://w9xs.us is the web site that hasn't been updated for about three or four years. Mostly the same except now using the AH-4 and Anderson power poles for interconnection.

I tend to go for "sturdy" and forego the extra few db some of the longer and fancier antennas might provide. With QSB swings of 4-5 S Units between transmissions it's a decent trade off at the moment.

See ya when 17 opens up a little more.

73,

Ron w9xs

Ron,

Mysteries abound when coping with such critical power and weight factors.

Thanks for sharing your website and experience with me, and perhaps I speak for others, as well.

Hi Al,

I use a Palm Minipaddle mounted upside down to a bar end extension. Don't have any pictures - actually I just found one but I'm not sure if we can include attachments on BMHA.

At any rate; picture handlebars that are pretty much straight across like off road bikes. At the end of the handlebars extensions can be clamped that give you a alternate hand position while riding. If those extensions are set a 45 degrees or less you can mount the Palm Paddle upside down, underneath with electrical tape. Now when you hand is in that riding position your thumb and forefinger engage the paddles on the key. This way you can have full control of the bike and send CW at the same time.

I'm not quite at 1000 words yet but a picture would pretty much clear it up. Nice thing about the Palm is that the paddle itself can be pushed back into the housing to prevent damage.

http://www.morsex.com/palm/

73,

Ron w9xs

==========
Ron, what do you use a key and where and how is it
mounted?

Cheers, Al

Ron,

I use the Palm paddles myself for car mobile and love them. They fit well and are very well made.

You can post any pictures to the groups using the Photo section. You should see a link on the left side of the BMHA group page that you can put photo's on.

Absolutly! I ride a 2005 Goldwing I have put 41,000 miles on in 18
months. I will be in Houston to provide support to the BP MS150 in a
few weeks. My dream is to get a 5th wheel toy wagon trailer and load up
my motorcycle, bicycle and ham shack and see the US.

1277. Bicycle Mobile Hams of America Organizational Announcement

Yahoo group: BMHA
Date: 2007-03-20 17:59:00 UTC
From: Mike Nickolaus
Topic: 1277 Message: 1277

New Directions

Mike Nickolaus, NFØN and the rest of the Board of Directors

Bicycle Mobile Hams of America Organizational Announcement

Bicycle Mobile Hams of America (BMHA) proudly announces a change to our organization.

Since it's founding in 1989 by Hartley Alley, NA0A, BMHA has been a premier information source for Bicycle Mobile Hams through our newsletter for members based on a yearly membership fee. Although BMHA hosts a web based information site along with sponsoring a group on Yahoo Groups, yearly membership dues have supported the organization since 1990.

After several years of discussion and efforts to secure a new newsletter editor, we are announcing the entrance to a purely web based newsletter made available to all. We will suspend yearly dues as long as our funding can be maintained with the current treasury.

For those in the last several years who supported BMHA with yearly membership dues, we plan to afford each with a CD-ROM containing all past issues of the BMHA Newsletter. The issues have already become a great source of information containing ideas and articles of interest to all BMHA'ers. This is a great reward to those who have supported BMHA for many years. We will be making these available by mailing a copy to each member at no charge.

The first new web based issue is planned to be made available in the first half of 2007 and will be placed on the BMHA website. Any current paid members will already be authorized to view this and all future issues. Others wishing to view the current and future issues will need to complete a short registration screen. No membership dues will be required and you will be able to view and download all issues.

Each newsletter will be placed on the BMHA website for members and shortly thereafter on the Yahoo Groups BMHA group site for all group members.

To continue the information flow, we ask that you submit articles you would like published to our newsletter editor, N9ZKS, NF0N or the BMHA webmaster. All articles and information will be considered for inclusion in the web newsletter. Please submit articles to one of the following:

n9zks@earthlink.net
nf0n@...
bmha-webmaster@...

Thanks for your support and we hope BMHA continues to be a great source of information for each of you.

Board of Directors, Bicycle Mobile Hams of America

From: Mike Nickolaus
Topic: 1280 Message: 1280

This is a reminder that we need pictures and a short writeup of your bicycle HF mobile setup for the BMHA forum at Dayton this year. Budd, W3FF is our speaker and want's to show as many pictures of bicycle HF mobile setup's as he can. This is your chance to show what you have done and I know there are lot's of good installations out there. We would also like to publish some of the best in the next newsletter.

Please send to me and I will accumulate for Budd and get them to him prior to the forum. My email is :

nf0n@...

Thanks,

Mike, NF0N

1283. Change in Room and Time for Dayton Hamvention BMHA Forum

Yahoo group: BMHA
Date: 2007-03-31 01:59:53 UTC
From: Mike Nickolaus
Topic: 1283 Message: 1283

The Dayton Hamvention has made a change to the BMHA Forum Room and Time.

The 17th Annual BMHA (Bicycle Mobile Hams of America) forum will be held at the Dayton Hamvention.

Date: May 20, 2007
Time: 9:00-10:30 am
Room: 5

Room 5 is near the ARRL displays. I understand we had a conflict with an ARRL Forum and Hamvention asked us to adjust a little. Hopefully this will not cause any problems with our forum.

Thanks,

Mike, NF0N

1284. BMHA Website URL Change

Yahoo group: BMHA
Date: 2007-03-31 02:11:04 UTC
From: Mike Nickolaus
Topic: 1284 Message: 1284

BMHA Home Page

We have moved our site:

Our new URL is http://www.BMHA-Hams.org. This is the same site, but on a server which has more resources that improves our content.

Note that the "-Hams" in our address is important. "BMHA.org" is the Black Mountain Harvest Assembly, which isn't us.

The newsletter page images are now much more readable. (They are large enough that you may have to adjust your browser to get the full effect.)

Please share your comments. The Webmaster's address remains unchanged at BMHA-Webmaster@...

Mike,

NF0N

From: Bill Sharp
Topic: 1284 Message: 1289

Just like I said.

You guys are the best.

I'm confident none of you (or any of us actually) realize the huge positive international impact
you have maintaining and enhancing BMHA.

Now that I live in a new cycling environment here in TX, I realize the increasing need for bicycle mobile hams on day rides and tours.

Here, organizers are just beginning to understand the benefits of bicycle mobiles over any other (cars, trucks, motorcycles) rider contact options.

"Oh, you're a ham on a bike?

I've never heard of such a thing.

Please volunteer.

Here's a tee shirt.

No, there won't be an entry fee.

Join us for lunch at the end of the ride.

Can we count on you next year?

Would you be able to bring more bicycle mobile hams?"

What's particularly interesting is that with day rides, and many of you know this, there are routes of varying mileages: 10, 20, 33, 60, 100, for example.

Communications help is needed on each of the routes.

And please allow me add this shameless commercial:

GOBA has a huge cadre of hams as we use hams for communication.

Bicycle mobile hams and those who ride the squads seem to be the elite operators.

Join us in June.

http://www.gobahams.org/

My best to you all.

1290. Re: Membership fee question

Yahoo group: BMHA
Date: 2007-03-31 16:30:57 UTC
From: Scott Laughlin
Topic: 1284 Message: 1290

Hi Al,

For a long time we had a quarterly paper newsletter. Our last editor was active in the Coast Guard. He continued his duties even while serving at sea duty. I can only imagine how complicated that must have gotten.

For the past few years we've relied on the website. There hasn't been any plea for funds, but like with any organization, the treasurer would appreciate some help, I'm sure. About three years ago, a CD was mailed to all the members. It's a store house of information. In my humble opinion, it would be worthwhile to get on board in order to receive the upcoming CD.

As for what a membership benefits, there's a ton of information and ideas available for the taking. I'll be sending a check by mid-summer. I guess it's up to the individual, but I think it's a bargain.

Best regards,
Scott n7net

Yahoo group: BMHA
Date: 2007-03-31 18:44:50 UTC
From: BMHA-Webmaster
Topic: 1284 Message: 1291

Bill:

Actually, if you read the realignment message (http://75.60.24.163/BMHA/Realignment-2007.htm) we have suspended the fee until the time the club needs more money.

You've made a good catch -- I'll get the membership form updated to conform with the realignment. The principal use of the fee was the paper newsletter (which is suspended and going to electronic delivery) and a bit of advertising.

Scott and Skip, thanks for taking the time to better inform me; I completely missed the bit about the suspension of dues. Thank you also for not taking offense with my quiery. You see I'm still smarting from a experience of several decades ago when a Corvair owners' club turned out to be a source of income for the "president". My intuitive instincts told me that this was not the case with BMHA ,but wariness becomes instinctive once bitten. I intend to join and will gladely give my financial support when asked.

Cheers,

Al

1294. Membership dues update -- yes, it is zero

Yahoo group: BMHA
Date: 2007-04-04 01:55:29 UTC
From: slafetra
Topic: 1294 Message: 1294

Several of you have pointed out that our membership application still states $15 dues. Although we reserve the right to ask again for money if funds run low, currently we are doing okay and dues are now reflected on the form at their actual value -- zero (meaning free).

http://www.BMHA-Hams.org/Info/Info-MembershipApplication.htm

We reserve the right to ping you via email (not more than once per year) to check on continued interest (this is one of the problems with free memebership -- people sign up and lose interest but don't tell us).

I also welcome comments on the relocated website -- and in particular about the larger (and print-quality) newsletter images that we can now host due to our larger amount of storage.

1295. Microphone for 817 bicycle mobile

Yahoo group: BMHA
Date: 2007-04-09 22:22:48 UTC
From: sinbad5210
Topic: 1295 Message: 1295

I am trying to adapt a "jabra", earplug/microphone for use with my 817 on my recumbent. The earplug/microphone has a icom/kenwood type 1/8 and 3/32 type plug. I have added a resistor/capacitor circuit to drive the electrolet. I am using a 1 microfarad electrolytic and a 580 ohm resister (manual says 600 ohm impedenance is nominal). I have been testing this on 2 meter FM simplex to a HT. I get voice but I also get a high pitched audio tone (more like a screech) as well. Right now this is ugly wired. Is shielding the issue? Could it be a grounding issue? Could a ferrite choke help? The microphone cable is shielded from my improvised handle bar PTT(up, down, and fast)control to my seat where I plug in the earplug/microphone.

Just a guess .. could it be feedback? Try plugging in just the mic into
the HT and see if it is still there?

Nope, not feedback. I tried several things to get rid of the "screech". Once I removed the resistor and the 5+V from the input to microphone, no more screech. But the sound quality is not good. On the HT I am listening on, you can tell there is voice, but it is unintelligable. I tried different values of capacitors to no avail. I remember several years ago someone doing this kind of adaptation but I can't find anything on it anywhere.

1298. Bike Rally during Field Day

Yahoo group: BMHA
Date: 2007-04-20 00:58:08 UTC
From: shepner2000
Topic: 1298 Message: 1298

I was wondering if anyone near the Milwaukee, WI area might be willing to provide some assistance.

I am working on coordinating a bike rally that happens to be on the same day as field day and will happen to be at the same location as the field day site for the local repeater club that I am in. I am the head of the local recumbent bike club and we are getting sponsorship from one of the local bike stores.

Since this represents a great opportunity to educate people on Ham radio and (preferably) bicycle mobile, Id really like to get more hams on bikes then just me and my Greenspeed (the one thats been at Dayton Hamvention the last 2 years). Also, Id like resources/ideas/suggestions for educating the public during this type of forum. Namely, I want something more/better then just communication support which the riders never really notice. However, I dont really do that sort of thing so Im not sure where to start

Stephen, it sounds as if you are going to have your hands very full!
And I'm not here to offer advice, only sympathy!

(Born and raised over in Brookfield, was WA9CSR there.) Every year
our
little county sponsors the North Georgia 6 Gap/3 Gap Bike Race ...
100
miles through 1500-4000 foot terrain. And until this year we have
hosted one leg (120-miles or so) of the Tour de Georgia. ('Chamber
of
Commerce refused to pay the ransom money this year.) Each year our
little radio club has handled the race communications in the
field ...
Red Cross liason, "sag wagons", rest stop refills, first aid calls,
traffic control, etc., etc. I totally loved the volunteer
involvement,
but I was always way too busy to think of climbing on my bike! It
was
enough to hold a mike and a notepad - - and watch maybe $4 million
worth of bikes zoom by!

That all said, I can not tell you how many of the cyclists (last
year's
6 Gap had about 2500 rgistered riders!) have personally thanked me,
and
formally thanked the club, for our support.

During last year's Tour de Georgia, the race organizers went so far
as
to have an airborn cell phone repeater to handle in-race comms. And
it
didn't work in the mountainous terrain ... they ended up relying on
us
humble hams.

I really wish you well ... make sure the newspapers/radio & tv
stations
get invited, and have lots of strange looking appendages on your bikes
(s)! The sum of my wisdom. Oh ... make sure you have two times as
many
porta-potties and three times as much Gator Aid as you think you'll
need! (Double oranges and bananas, too.)

Best of luck to you ... 73 de Dave,
W9JWT

ps ... The original owner of W9JWT, my Dad, was a life-long member of
the Milwaukee Radio Amateurs Club.

From: shepner2000
Topic: 1298 Message: 1300

Thanks for the sympathy. Im gonna need it before this is done.
Fortunately it should be somewhat small as far as such things go but
when I was asking about how many people to expect I was quoted
"between 12 and 80 people". :P

Fortunately, I do have some assistance from the repeater club and the
bike club seems to have some motivated people this year so Im hoping
that this will go smoothly. I would really like to find more Hams in
the area that ride bikes much less had radios on them. At least my
Greenspeed is setup for radio, GPS, etc, etc, etc....

So, again, anyone in the area who would like to show off their bike?
Anyone have ideas for a talk/demo during lunch??

We're working on that. Probably.

The CD exists (that's easy to say since there have not been newsletters in awhile).
A "reduced-size" version is what powered the online newsletters when we were hosted at LaFetra.com. I leveraged the CD's print-quality images when I moved the site to BMHA-Hams.org (which happens to physically sit in my upstairs study at home) to get more space and improve the image quality.

The information on the CD is exactly what is on the website, although the user interface (UI) to accesses the articles is more list-driven than the database-driven query on the website.

Come to think of it, an ISO image of the CD is something that I hadn't thought to post to the website, now that we have "infinite" space at BMHA-Hams.org.

1303. Work Amateur Sats with your HT

Yahoo group: BMHA
Date: 2007-04-29 23:57:57 UTC
From: Clint Bradford
Topic: 1303 Message: 1303

The handout I use while talking to groups on "Working Ham Satellites with your HT" is posted
at...

http://homepage.mac.com/clintbradford

It is a four-page tutorial that will get you communicating with AO-51 (and SO-50) quickly and fairly easily, as long as your HT can be programmed with split freqs.

1305. Lincoln (NE) Marathon on a bike with APRS

Yahoo group: BMHA
Date: 2007-05-06 20:09:07 UTC
From: Roger Cox
Topic: 1305 Message: 1305

Just completed the Lincoln, Nebraska Marathon this
morning on my Trek 7.6FX. Had a great time getting
soaked in the rain.

The Open Tracker on the back of the bike worked great,
with 57 position records in about 2 hours and 30
minutes. This was with an FT-60R and a 1/4 wave
antenna. Here is the track:
http://maps.aprsworld.net/map/track.phtml?call=WB0DGF-4&skipTable=0&skipBogusCheck=0&showRawPackets=0&start_weeks=0&start_days=0&start_hours=48&start_minutes=0&end_weeks=0&end_days=0&end_hours=0&end_minutes=0&time_search=1

You can compare this track with the race route map
here:
http://www.lincolnrun.org/marathon.htm

And some photos of my installation:
http://www.wb0dgf.com/aprs/aprs_Trek.htm

From: Barry Bogart
Topic: 1307 Message: 1307

Very nice. I have been using a TT3 with a VX-2r, but not getting a lot of range. My YL has a 60r so I guess I'll try that. But how much batery life do you get on the 60r? We do ultra (Rando) events (on a tandem) so that is a consideration. We sometimes use a solar panel on a 10-cell AA niMh pack with the VX. I recommend a 1/2 wave for a whip, BTW. Larsen makes a good one.

Barry,

So far, the FT-60R has been great, but this is the first long event that we have used APRS on it. The FT-60R is actually my wife's radio - a present for her when she finally upgraded this spring. (she's been a Novice since 1978) After the Marathon - about 2 hours, 40 minutes - the battery voltage was 8.0. It had a full charge before the event. We have been charging it overnight when it drops below 7.5V. The Open Tracker and Deluo were on a separate supply, and the OT was set for 2 minute intervals.

Last year I used a Yaesu FT-2400 on the 5 watt setting, with a 7AH sealed battery. This, along with a heavier hybrid bike was a bit too much, but worked great. With the new bike and rig, I figure that the system was about 15 lb. lighter this year, with the same 5 watt output power.

I may go with a longer antenna on the bike at some point, but it is nice to swing my leg over the rack-mounted antenna without damaging anything ;-)

1313. Recumbent Bike Rally on June 23rd at Field Day in Milwaukee, WI

Yahoo group: BMHA
Date: 2007-05-15 18:30:49 UTC
From: shepner2000
Topic: 1313 Message: 1313

The Greater Milwaukee Recumbent Bicycle Club (GMRBC) is proud to announce the return of the Milwaukee Recumbent Rally for 2007. Additionally it will be located at the MRC91 Field day site in Whitnall Park, just around the corner from the Wheel and Sprocket Hales Corners, WI store. This years rally is sponsored by Wheel and Sprocket Bicycle Store in Hales Corners, WI. Harry Wozniak (recumbent bike sales manager) is providing the food you provide the legs for the 30 mile ride before the meal. The Milwaukee Radio Club (MRC91) are hosting the site and will be presenting a program on Ham radio operation for your meal time enjoyment. Come ride along lightly traveled suburban roads and paved trails. Then stay for the food! If you don't wish to ride you can always hang out at the site and participate in the MRC91 Field Day activities and/or assist with the bike rally. Volunteers are always welcome! Non-recumbent riders are also welcome

The flyer is available here:
http://www.asyla.org/GMRBC/2007/Bike_Rally/RallyFlyer.pdf
The route for the ride is available here:
http://www.asyla.org/GMRBC/routes/Field_Day_2007.shtml

We hope to see you there!

73,
stephen KC9EKU

1314. New member, longtime biking ham, just set up HF

Yahoo group: BMHA
Date: 2007-05-20 23:55:15 UTC
From: Joe Martine, N5USR
Topic: 1314 Message: 1314

Hello! I was pointed here from a bike-mobile discussion on QRZ, and have been reading through the old posts. Great to hear there are a fair number of recumbent riders as well as mobile hams around! :-)

I ride a RANS V-Rex, have had it about 5 years now, and it's had an antenna mount since day one. Until yesterday, just 2M/70CM though. And I seldom took it along, as the repeaters around here are sadly DEAD most of the time... Yesterday I came across a thread on QRZ where someone was asking about the best antennas for HF mobile, and he mentioned the ATAS-120. Well, I just bought an FT-857 and the ATAS-120 but hadn't bothered to try them because I "just knew" the thing would tune worth a darn on a bike... But I tried anyway, since someone else had asked!

Wow, was I ever surprised. It tunes better on the bike than it does my truck! So I put a little work into getting it (safely) ridable, and posted some pics on my website here:

http://okcforum.org/~martine/hfbike.html

The quick version is that I have the 857 in the mesh part of a rear pannier so it can breathe, a 12AH gel-cell sits in the bag on my rear rack, and a luggage-rack mount is bolted flat to the rear rack. I used a remote-head kit to put the radio head and mic on my handlebars.

Even better, I finally got around to taking (and passing) the General and Extra tests last week, and my first-ever HF contact was on 40M this morning, running 20W, while pedaling around the lake! :-D

I was thinking about getting an FTM-10RS when they come out since the idea of a waterproof mobile (with no mic even, wonder how well that works) for the bike sounds really cool. But now I'm thinking I'll splurge and go for another FT-857 as it works so well! Just that it's the complete antithesis of "water resistant"... The ATAS-120 is pretty doggone pricey too! I thought about trying an FT-817, but I'd have to mount the entire radio on the handlebars and it's also nice being able to crank the power up a bit if needed - I started at 10W this morning, but wasn't being copied well. Going to 20W did the trick!

Only real problem is weight - this setup is pretty heavy! But I need to lose weight anyway, so can use the exercise... ;-)

Perhaps I'll see some more bike-mobile hams on the road soon!

Joe Martine
N5USR/AE

1315. Velomobile

Yahoo group: BMHA
Date: 2007-05-21 01:20:06 UTC
From: Bryan Lowe
Topic: 1315 Message: 1315

So I am buying a Velomobile. My Seattle commute is about ten miles each way. It will have electric assist. I can ride on bike trails most of the way. Seattle is a pretty bike friendly city.

http://www.nimbuskayaks.com/velo/velo%20progress/december%202006.htm

I have been a ham since about 79 or so, but mostly inactive. I want to outfit my bike with some gear. The only equipment I have is an 817.

I understand that qrp may be too big a challenge for a bike. I will APRS it.

If you had this much room..and weight wasn't too big of an issue... what would YOU do? ;-)

Bryan

1316. Re: New member, longtime biking ham, just set up HF

From: Jake
Topic: 1314 Message: 1316

Welcome, Joe. Your report sounds all too familiar. I started with the 817 on the handlebars:
http://www.n0lx.com/bicycle_mobile.html

Then I tried the IC-706 with the radio on the bike rack along with a 17 Ah battery, and the control head mounted on the bars. Running 20 watts in Colorado, I had a New Zealand station break in while I was in QSO with XE2FL: http://www.n0lx.com/zl1aix.html

Click the link at the top of this page to hear part of the audio from that contact. I had an Olympus digital recorder tucked under the Heil earpiece, under the helmet strap. Not comfortable, but I'm glad I brought it that evening! I use a 14' end-fed, shortened halfwave antenna tilted back to keep it street legal.

Do keep us updated on your HF attempts on the bike.

Jake, N0LX

1317. Great Weekend

Yahoo group: BMHA
Date: 2007-05-21 06:51:02 UTC
From: Norman Huber
Topic: 1317 Message: 1317

For those of you who missed it, it was a great weekend. I arrived Friday and spent Friday and Saturday going to forums, searching for toys, and meeting some of the people I had met before at Dayton. I didn't spend much, but perhaps that's because I didn't have much.

Sunday was even better. It was a fantastic B. M. H. A. forum with an interesting speaker, and some great bikes to look at. We exchanged a few ideas, and hopefully we will see lots of information flowing toward the newsletter editor (that's me) so that we can have an interesting newsletter.

In reply to the two letters I found waiting for me. Yes, you can run HF from a bicycle. Talking to Bud at the Buddy Pole booth, I was treated to tales of pileups while they were on their vacation. We will have to get some of these things written up for the newsletter so that everyone can find out about the fun of being bicycle mobile.

Joe,

Welcome. It sounds like you've had major success without the help of others. But I have a thought.

HT manufacturers caution against using five-watts with the rubber duck antenna--something about the eyes in an RF field. I wonder about 20-watts so close to your head? Maybe that's an unfounded fear.

Norman,

I sure would like to have seen some of the bikes on display. Did you snap any photos you can share?

Please tell us about the newsletter you mentioned in your signature.

Norm,

Thanks for taking time to send us the Hamvention Headlines.

As someone who was able to go for over 20 years and now can't, I will be looking forward to write-ups.

How was the flea market outside this year?

But really I wanted to thank you for doing this BMHA work.

It becomes even more important resource as our usefulness as bicycle mobile hams in Katrina like emergencies becomes better known and increases.

In that vein, It would be great if all of us were able to take part in bicycle mobile communication operations, those where health and welfare for large groups takes place, like on tours and large day rides.

It's great practice, sorts out equipment and gets in the miles regardless of the route you decide to ride.

I'm looking forward to the BMHA newsletter Norm.

Best,

Bill

1321. RE: [BMHA] Re: New member, longtime biking ham, just set up HF

Yahoo group: BMHA
Date: 2007-05-21 17:08:32 UTC
From: Norman Huber
Topic: 1314 Message: 1321

The handheld manufactures are insuring that they have a bit of protection from lawsuits. Truth is (my job before retirement was radiation protection) is that dose is a combination of rate and time of exposure. If you raise the power high enough you can damage sensitive tissue (the lens of the eye is sensitive tissue) with short exposure, or if you talk for long periods of time. Limits are your battery life and the strength of your arm in the case of an HT.
The recommendation is to mount your antenna on a support that puts it above your head as much as possible. In mobiles the perfect place would be your car roof. Trikes and recumbents are nice due to the riders position helping to allow that. My first installation with the antenna placed on my front handlebar bag was obviously bad from both the risk of punching an eye out as well as having the antenna very close to my face. My current installation with the antenna on a seat post rack puts the antenna in a much better position, where the radiation only affects relatively insensitive areas of my body.
One also should look at the antenna radiation pattern, where one will see that the takeoff angle and from an antenna is in an upward direction carrying the primary radiation over the head of the rider.
Discussions I had seen in the technical publications for the most part agree that normal use of the cell phones and other RF devices will not cause harm to the individual user. Obviously, there are some who will cite specific experiments to argue that the devices should be outlawed or managed more closely. One must evaluate the risk one is willing to accept. If we wanted a risk-free environment, we would not be writing to win three wheeled vehicles on public roads at all.

I for one, am planning the installation of my HF radio on my motorcycle on which I have put 51,000 miles in the last 18 months. And I'm known as a wretched jaw.

Norman,

Fifty-one K a pretty fair distance on a motorcycle. Obviously, you ride behind a faring to log that many miles in such a short period.

For traveling distance, I ride an ancient, but stock CB-900C with a tank bag, only. What won't fit in there gets left behind. I QRP from my place in Pie Town, NM, with 750mW, eight D-cells, and a pruned dipole (so I don't have to pack a tuner).

At 70 I no longer multitask well, so I stop when it's time to drag out the key.

On APRS I'm n7net-6, bicycle and motorcycle.

I thought about this too. I went to an RF exposure website and plugged in the relevant numbers and was surprised to find that while I'd be (and have been for a while!) exceeding the maximum recommended exposure on 2M and 70CM, and I would need to keep the power down some on 10M, for 20M and 40M there's no problem - even right on up to 100W on 40M, although I still don't think I'd care to sit that close to 100W! (20M 100W is okay for "controlled" - which I suppose my seat would be, but not for "uncontrolled".)

This assumes, of course, that I'm working SSB which has an average power density of 20% of PEP.

I used this website:
http://n5xu.ece.utexas.edu/rfsafety/

Joe,

Thanks for posting the website. I wasn't familiar with it. I've moved my antenna all over the place--winging it, as it were--while keeping my power very low. I'm sure there areothers who will make use of that information. If it isn't already in the file section, maybe it should be.

1325. Bicycle mobile from HB9 & HB0 this summer

Yahoo group: BMHA
Date: 2007-05-22 17:17:32 UTC
From: dombaines
Topic: 1325 Message: 1325

Hi all,

I live in UK but currently working in Zurich for a bank (IT contractor) and I have been operating /P all over the place since January. Now I have my bicycle (Ridgeback Panorama) with me. It also has a front wheel dynamo.

When contract is up my wife and I are planning to do a cycle loop of HB land.

The RF plan is to use the hub dynamo to charge either 2 6V SLA in parallel during the day (6V 3W lighting system so that seems like minimum modification) or some combination of NiMH batteries either of which I will fit into either front pannier (keeps dynamo leads short). When we get to whereever each night if condx ok I can operate a bit /P with my FT817. Antenna might be (got to figure this out yet) a buddipole canabalised to make a vertical of some sort, maybe use the bike as a base? or a long wire antenna suitibly slung over a tree limb etc.

Tuner will probably reduce the weight to an SLT (altoid tin time).

If I get it finished in time maybe operating from an ATS-3.

I can operate digimode psk31 using an iPAQ 2790 as well and that charges very nicely from 6V.

Anyone got any comments?

73

Bud of Buddy poles uses his pole as a vertical. He showed us pictures of his rig. Get a meter and verify you have DC continuity from antenna mount to handlebars. The bike is enough of a counterpose. Mount the antenna on a support approximately above your head and angle it back a bit so that if you go under a low branch etc. you will not break the antenna.
Contact W3FF, he's a trike rider and can give you particulars.
73 and good luck.

VE7VIE/WV2J, Barry, posted to the group about riding to Seapac. My son, Chris, W6HFP, will be there at the Buddiole booth. He'll be bringing some of his products to sell, but he always likes talking bikes. He rides a Lemont when he has time.

I'll try to get some pix together of my recumbent trike to send with him. Barry, it's not a huge show, so please look for Chris when you get there.

Seaside is a very nice place to visit. It has a holiday atmosphere for sure. I've been to that show many times. What a place to ride.

From: wb9gie
Topic: 1331 Message: 1331

I recently started up a MySpace page and have put photos and QSL's from my past 30 years or so of bicycle mobiling, with more to be added soon... I'm in the the process of moving from the Eastside of Milwaukee to the western suburb of Brookfield, Wisconsin, and should be all moved in by June 1, 2007... I have 97 countries worked and have all 50 states worked, from my bike, but not too much in the past 5 years or so because my occupation (RFID Interference Specialist) keeps me on the road travelibg most of the time... I gave a presentation for the BMHA back at the Dayton Hamfest in 1994 and have been written up in many ham magazines, including a two-part article written by Dave Ingram back in 1994 in CQ Magazine, coinciding somewhat with the Dayton Hamfest presentation... The most recent trip of interest was back in 2001 when I cycled, from Milwaukee, WI, out to Clear Lake, Iowa, to the Surf Ballroom, where I operated from the parking lot from my bicycle on HF... Buddy Holly, The Big Bopper, and Richie Valens played their last show there "The Day the Music Died" back in 1959... Hope you like the bike pics... The older stuff was with a Ten-Tec Argonaut 509, on a 3-speed Huffy, and the more recent is with a a Yaesu FT-817 on a Trek 7000 mountain bike...

Here's the MySpace address: http://www.myspace.com/wb9gie

Feel free to e-mail me with any questions about my setup or anything else...

Please let me know how that ear bone bike works. I've been obsessing about this type of mic for bike mobile use, but haven't been able to find any real feedback on how well they work/sound. I've seen them on ebay for ~$30, and on real sites for ~$100 and was wondering what the differences might be.

This is what I have used for years (trade-name "EarTalk"). It works very well and is easy to slip under a helmet strap (or slip it out again so you can "detach" yourself).

It is sensitive to wind noise (I learned to skew my head by about 20 degrees horizontally so the in-ear microphone was farther forward than my other ear. This suppressed wind-noise on my signal. You can tell when you have the attitude right because you also hear the wind noise in your ear).

Also, because the microphone is next to the speaker, it is impossible to use VOX.

The construction of mine is very simple (I had to dissemble mine when the speaker stopped working) -- it is a standard ear-bud ("Walkman style") speaker with a small microphone mounted directly behind it.

So, my experience has been very good. Now, I'd be interested in anyone who has used a throat mike on a bicycle !

Howdy all, I'm a new member and new to hams (been waiting 2 weeks for my call sign).
I probably won't be using my HT on my bicycle much but I would like to wire it up for use on some of my motorcycles so I joined this list to get some ideas.
I'm a RAM-Mounts dealer so that would be the natural way to go but they don't make anything specifically for my HT (Yaesu VX-7R).
I'll probably go with a universal RAM Mount but figured I should check here first.
Any ideas?
Thanks.

Topic: 1334 Message: 1335

I actually used Velcro to mount my D7 and Garmin V to my motorcycle (Honda 1200) for a number of years. I still use it to mount the radio and GPS to my bicycles. It is one thing you could think of. Just use a lip on the bottom of the backing if it is close to vertical to provide support for the weight of the device so that the Velcro is primarily keeping the radio or GPS from flying out of the holder.
For the Garmin V I hand bent a thin piece of aluminum sheet into a V shape to match the back of the GPS and had a flat back with a short lip at the top which hooked over the edge of the surface I mounted it to to hold it. I velcroed the mount to the bike and the Garmin to the mount.
I can send you pictures if you want.
I do like the RAM mounts on the new GL1800 better though. Luck would have it that they have the mount for my current GPS, the 2610, and with a little epoxy, I have the D700 control head and my Sirrius radio control mounted on the same RAM mount where the little Honda Emblem was under the ignition key.

WELCOME to the group - and to the wonderful amateur radio hobby!

The RAM-B-138-BC1 will accomodate most any HT that has a tradional belt clip. The RAM-B-149Z-BC1 has the U-Bolt attachment method got handlebars.

I slip the stock VX-7R belt clip off, and use a strap of Velcro to secure the VX-7R to this RAM
platform mount. Pictures at...

Heed the 11th Commandment -- Thou Shalt Make Backups

The BMHA Webserver is back in service. The hard drive failed (I've never heard one complain so loudly -- it sounded as if the bearings had turned into sand).

Since this hard drive (a laptop 60 GB drive) had been dropped bare (outside of the laptop) a few feet onto a wooden floor a few months ago, I was careful to have a spare handy.

Today, that spare was used (another 60 GB drive, but one which has been treated much more kindly).

We are fully restored (except for a few page hit counts) and should be online without any data loss.

1341. Bicyle HF antenna, gutter mount?.

Yahoo group: BMHA
Date: 2007-06-08 07:08:57 UTC
From: dombaines
Topic: 1341 Message: 1341

Hi all,

Any mobile antenna experts have any suggestions or recommendations for a gutter mount HF antenna... for use on a bicycle (rear rack)?

Thinking about trying it out with a blue tooth headset and FT817 with a blue tooth audio tx gadget this summer as I have a long distance cycle trip. Might be amusing to see what is possible if nothing else.

I will not be trailing a radial for hopefully obvious reasons but would I have any issues with needing to ground the frame as the tyres will act as insulators.

I would be able to deploy radials and a ground when stationary or at campsites.

I know a dual band whip for 2m or 70cm works fine as did that last summer but thought might be fun to see what is possible on HF.

Also posted to the GQRP group.

I don't know that I qualify as a mobile antenna expert yet... ;-) But
for my 2-cents-worth...

I bolted a gutter-mount antenna mount to my aluminum rear rack - didn't use the clamp pieces, just laid the flat side of the mount directly on the rack and drilled holes for bolts so a very good connection mechanically and electrically. I didn't do anything else though - I've heard some people do a lot of extra bonding between components (rack to bike, etc) to ensure good electrical connections. The mount has an SO239 on it, so any mobile antenna that uses that works fine.

For HF I was pleasantly surprised to find the ATAS-120 I had bought for use on my car loads / tunes up just fine on the bike. Don't know if that was purely luck or what... It is an "auto-tuning" antenna, and the FT-817 won't drive it (I have an FT-857) but MFJ makes a little box to manually adjust it. It seems to work well. First time out I made a 40M contact OK to GA with 20W, and I hear quite a few decent signals with it.

One caveat I've found is that the ATAS-120 is only so-so for 2M/70CM. It works, but performance is nowhere near the dual-band mobile antenna I had been using previously.

I will also concede this is a rather pricey antenna to put on a bike...!

I've wondered how the ATAS-25 would work - it is the manually tuned antenna "designed for" the FT-817. Not sure if it would hold up to mobile use, or is more for fixed-portable. It also isn't much cheaper... I rather like being able to change bands while in motion, so will probably just stick with the 120.

Good riding!

Thanks for the comments Joe.

Not intending to try an ATAS antenna, bit too big. I will order a SPX-100 and use it with a 3/8" mount.

1344. Effective / comfortable headsets for cycling?

Yahoo group: BMHA
Date: 2007-06-17 00:54:28 UTC
From: Joe Martine, N5USR
Topic: 1344 Message: 1344

I may be asking too much... Wouldn't be the first time! :-)

What headsets have others used with good success? One of the most obvious concerns I see is comfortably wearing it with a helmet, if it uses an over-the-head band. Coming along right behind that is having an effective windscreen of some sort - something I've never been able to adequately solve. So far I've pretty much just had to stop moving if I'm headed into or across the wind. (And if it's windy enough, even that doesn't help much.)

I have heard all kinds of good things about the Heil line of microphones and headsets, and am considering a Traveler Single Side for mobile (driving) use, but it looks like that would be very difficult to use with a helmet. The BM-5 looks much less "massive" but would still be hard to use with a helmet. (Of course, I haven't actually seen either - so my perception may be wrong.)

Any other lines / models that would work well?

One option I'd be open to (for the car as well) is using an external speaker to listen - I would actually prefer this most of the time, I find headphones somewhat annoying for extended use - and just having a headset mic but I haven't found much in that line.

I have not figured out what I will use when I switch to HF on the bicycle. Currently I use an ear bud with an over the ear hook and a small boom mike for VHF/UHF. My helmet straps hold it in place and it was designed for my Kenwood D7 with a push to talk button I clip to the safety bungee I use over the radio and GPS.
On my motorcycle I use J&M helmet speakers and mike. They have EXCELLENT noise rejection. "Doesn't sound like you're mobile," while I'm rolling at 75 mph. J&M makes a number of units that could be mounted almost anywhere and might be the answer if you can make up appropriate interface wiring.

What headsets have others used with good success? One of the most obvious concerns I see is comfortably wearing it with a helmet, if it uses an over-the-head band. Coming along right behind that is having an effective windscreen of some sort - something I've never been able to adequately solve. So far I've pretty much just had to stop moving if I'm headed into or across the wind. (And if it's windy enough, even that doesn't help much.)

I have heard all kinds of good things about the Heil line of microphones and headsets, and am considering a Traveler Single Side for mobile (driving) use, but it looks like that would be very difficult to use with a helmet. The BM-5 looks much less "massive" but would still be hard to use with a helmet. (Of course, I haven't actually seen either - so my perception may be wrong.)

Any other lines / models that would work well?

One option I'd be open to (for the car as well) is using an external speaker to listen - I would actually prefer this most of the time, I find headphones somewhat annoying for extended use - and just having a headset mic but I haven't found much in that line.

Topic: 1349 Message: 1349

Hello all, I am a new member of the group.

For the past seven or so years I have been doing ham radio support as the Net Control Station for the MICHIGANDER FAT TIRE BICYCLE TOUR. The MICHIGANDER route changes every year, but the basics of each route are that in six days the bikers ride up to 350 miles on RailTrails and back roads connecting to more RailTrails, all with published SAG stations about every ten miles, and stopping each day at a new place to camp. Each morning the riders break camp, load their gear (tent and luggage) on a truck which forwards it to the next campsite, and then they take off the day's adventure. We've gone thru some very neat little country towns every day. Breakfast and dinner are provided at the campsites, usually schools. The riders only have to provide for their own lunch each day. The route always has many lunch choices along the way. The whole thing is co-ordinated via a 2 meter mobile net that repeater hops as the ride traverses across the state. It's quite a bit of work just to get all the repeaters lined up each year. The MICHIGANDER has used hams since the second year and this year I think is the 16th year. The ride is the 3rd week in July, this year the 14th thru the 20th of July. There is a two day ride and a six day ride. The two day ride on the weekend stars that Saturday, and the six day ride overlaps starting on Sunday and shares the day with the 2 day ride. On that Sunday we have had over 1,000 riders to keep track up and monitor health and welfare as well as keep the SAG stations supplied.

I didn't really mean for this to be a commercial, but as this ride is kinda like my bona fides, my chops, or whatever you want to call your years of bicycle mobile experience, I thought it would serve as common ground to the group.

BUT, if any of you are interested in more details about the ride I would be happy to share. You might want to mark your calendars for next year, hams ride for half price if they are willing to be an asset to the net and help with the success of the ride.

I also have a little experience with 2 meter bicycle mobile myself, but only locally. I had my bike fixed up at one time with a dual band HT and I would carry on conversations with friends as I rode around town. I always have wanted to be bicycle mobile on the MICHIGANDER but in the earlier years I was never confident that I could ride the whole day and not have to be SAGGED in myself. Besides, just doing the NCS duties was quite a bit of fun and very much a challenge at times.

Well, I've gotten long winded as usual when I really should have just said Hello and thanks for letting me in the group.

Have a good ride everyone.

Craig,

Very Interesting, this Michigan ride. I just returned from a motorcycle week in the hills of eastern Oklahoma and Arkansas. I'd sure like to do the Michigan ride.

What is the cost for a tandem bike?

Joe,

I have both the Heil Traveler single side, and the BM-5, neither would be wearable with any of my bike helmets. They're both great products, but their over the head straps make them useless for this application. About the only thing I've found that works on the bike is the ear-bud style, and the only time I've beat the wind noise issue while tx'ing, is when I'm in a wind "pocket", with a tail wind, nearly the same speed as I'm going.

Headsets that go around the back of the head can also work with a bicycle. I know that Logitech and Sennheiser both make headsets with microphones in that style for computer use; it should be possible to adapt them for ham radio applications.

You'll want the old-fashioned analog models, not USB headsets. Though at least one Logitech model that might be a candidate, the Premium Notebook Headset, has analog I/O plus a USB audio device that you can optionally plug the analog I/O into -- use the USB with your notebook computer, and the analog with your radio.

The ones I know about are DUAL headsets, which might be a regulatory issue in some locations. If you're just concerned about too much sonic immersion, only feed sound to one ear; the headsets I know of in that style don't offer any acoustic isolation to speak of, so you'll be able to hear just fine with a covered ear so long as you're not feeding audio to it.

I have tried riding with a pair of open headphones in that style (without a microphone). Wind noise is a problem; it's difficult to hear anything. YMMV, depending on specific headphone design. Wind noise in the microphone may also be a problem. You'll have to try a candidate design and see if it works for you.

Standard ear buds (like the ones that come with an iPod) fall right out of my ears, so I can't offer any opinion on them. The kind that insert into the ear canal (Etymotic, et. al.) have way too much acoustic isolation for bicycle mobile use, though some might find them acceptable if worn in only one ear.

Ok, this time I'll monitor my fat fingers a little better and get
the information in the post before I send it hi hi.

Detailed information can be found at the following webiste:

http://www.michigantrails.org/michigander.asp

The cost to ride depends on how many days you want to be on the
ride. There is a 2 day, 6 day, and 7 day ride. The 7 day ride is
just doing all of the weekend ride and the 6 day ride combined. The
6 day and 2 day rides overlap on the same Sunday. Mail in
registration ends on July 5th. The ride is July 14-20 this year. The
cost for adults on the 2 day ride is $90 plus a $15 post May 1st
late fee. Same ride but for youths (age 7-17) is $80 plus the same
$15 late fee. Kids age 1-6 are free, but must be attended to at all
times. The 6 day ride is $263 for adults plus a $35 post May 1st
late fee. Youths for the same ride are $243 plus $35 for the late
fee. The 7-day ride for adults is $298 plus $35 for the late fee.
Youths are $278 plus $35 for the late fee.

So, if I have my math correctly and using the 7 day ride as the max,
for participating hams, depending on if they wave the late fee, if
they half the late fee, or if they charge you the full late fee,
would be somewhere between $156.50 and $173 per adult since
participating hams ride for half price, for the whole seven days. In
addition to that you would want to at least bring along lunch money
and money for rafting or whatever.

Mark you calendar, for bicycle riding hams it is a great experience.

One thing I would offer up to this discussion is that cycling with
full (both ear) headphones is a bad idea from a safety standpoint.

Having hf and vhf cycled from Canada to the Florida keys, hearing what
is behind and around you is critical. I went with a single ear "
loop around the ear" headphone for my right ear, leaving my left open
for listening to traffic. (I cut off the other ear piece) The Mic
was nothing more that a headset element with a very large wind screen
on it. It worked well on cutting noise down up to about 20 mph.

I wired a ptt swith on my handlebars to control everything. Worked
well for both the 817 as well as the kenwood aprs ready ht.

Not only restricted hearing, but static crashes and a sudden band opening will blow your ears off if both ears are covered.

The latest issue of QST has an article on building an interface box to use an analog PC headset with an Icom HF rig. The same approach could be adapted for other radios. Depending on where the radio/control head is mounted, I'd consider adding a volume control to the PTT and up/down buttons.

Definitely use a 1-ear headset - the motor vehicle code in most states (it's the case here in Virginia) prohibit covering both ears for cyclists as well as other vehicle operators.

The only problem is that all of the one-ear headsets I have ever seen are either the kind with a band that goes over the top of the head (incompatible with a helmet), or use earbuds (which don't work for some of us). I've seen a couple of headsets for HTs that use an over the ear clip; those could work. If you're willing to sacrifice part of your nice PC headset, I suppose you could remove one earpiece from one of the behind-the-head sets I was suggesting.

If anybody out there finds a model that works really well for radio use, tell us about it!

RE: One-ear headset I used, very successfully, an Icom HS-51 (I think
that's the model) that had a band over the top of the head AND it used an
"earbud" style earpiece. The headband was mostly for holding the mic boom.
It was a little snug under a helmet but not objectionable if positioned just
right.

The best think about that headset was it included both a VOX and a latching
PTT feature. VOX on the bike does not work .. but the latching PTT worked
quite well .. for me at least. Not as good as a PTT on the handlebar but it
worked. All I had to do was take on hand off the bar and squeeze the button
to talk .. squeeze it again to stop talking.

As I understand it this headset only works with certain models of Icom HT's.

I used to have a bicycle helmet that i mounted a set of head set speakers to. I made a cut into the Styrofoam above each ear and inserted a piece of flexible plastic (cut from a nalgene bottle). I then mounted the right and left speakers appropriately. They did not press against my ears, so they did not obstruct my hearing of traffic noise or other sounds. As long as you use your head when adjusting the volume, they worked quite well. They had the advantage of not needing to be so loud as to disturb other riders as a speaker on the handlebars etc might have. Those of you riding recumbent have an advantage of being able to mount a speaker(s) right behind your head which would make hearing them quite well.

Currently I use a unit like the MFJ unit shown at this site.
http://www.mfjenterprises.com/pictures/MFJ-293K.jpg
I have not had any much problem with people complaining about wind noise as my heavy breathing from being out of shape drowns out the wind noise.

If you have a problem with wind noise on your transmissions, you need a true noise canceling microphone. They are the standard on motorcycle intercom or communication microphones. Bob Heil once showed me how they built microphones for Nascar Pit crews so that the noise of the cars would not prevent communication with the drivers. It can be done!

Norman, don't take this personally, but you've just hit one of my hot buttons. Creative solutions aside...

<RANT MODE>
I would "never" use a bike helmet that has had some of the styrofoam cut away. I've limped away from some spectacular and not so spectacular crashes, where instead of serious injury, I only ended up with minor concussions (My helmets did their job, and broke... my head didn't!). Not sure I'd still be here if I hadn't had an intact helmet on before the crash. Lets face it, we don't wear the things because of the fashion statement they make. We wear them for protection, and weakening them before we even put them on seems to rather defeat the purpose.
</RANT MODE>

Please folks, don't carve up your helmets, glues are also a no no. These helmets are designed to provide maximum comfort, minimum weight, and still meet a safety standard, any structural alteration makes them useless.

I have been using the Telex Stinger model 700 and 750 for bike mobile for several years. Here is the link:
http://www.telexwireless.com/landmobile/Product.aspx?MarketID=8&CategoryID=21&ProductID=67

These might be a little on the expensive side, but they work great. The band wraps around the back of my head from one ear to the other, well under my bike helmet. It has a single ear speaker which sits just outside/alongside the ear and doesn't cover it or plug it. The boom mic is adjustable and has a nice wind sock. There is a weatherproof standard PTT button that can be attached or draped over the handlebars. No locking type PTT, but that sounds really neat.

I usually mount an HT on the handlebars with a long (16") rubber ducky, then coil the cable around the handlebar so that the PTT is accessable, then run the cable to the headset. I have used it either with or without a breakaway connection in the cable. I feel a little more comfortable with the breakaway connection, as I always have nightmares of crashing and being strangled by the headset cable :-(If the radio & PTT & headset were all on your body, then a breakaway connection wouldn't be needed.

1365. FIELD DAY

Yahoo group: BMHA
Date: 2007-06-21 14:50:14 UTC
From: Ron Baran
Topic: 1365 Message: 1365

What's everybody planning for FD?

I'm using the standard bike mobile HF set up with a few addendums.

This year I want to spend a few hours in the middle of the night scooping up some 80 mtr CW Qs so I've added a 20W halogen fog light and an array of flashing LEDs. But the coup de grace is the two 80 meter ham sticks in an L configuration. The only redeeming factor in the whole goofy looking setup is that it will be dark and the punks in pick up trucks will get distracted by the flashing lights.

The other addendum is the K3 memory keyer with outboard push buttons. How many times can you send "1C IL" from a handle bar mounted paddle before your hand falls off?

Anybody up for a challenge? If so, and you are on any sort of movable vehicle, I'd recommend a good look at Class 1C. It seems to be a class that isn't taken very seriously by most - how else do you explain a bike mobile finishing third last year? Let's just hope that those maritime mobile guys get distracted by the "girls-gone-wild" boat down the coast.

Goals for this year: 300 cw Q's, 100 miles on the bike, raging case of bike butt, and not running into the back of a parked police vehicle. (Don't ask).

Cordially,

Ron
W9XS, 1C, IL

Oh no - another bike mobile out of the competition, Lenny. Wake you up AND knock your donut on the floor. I would be in big trouble. Although you get bonus points for coming in contact with a government official. And here you thought it was an accident!

It does look like a few guys and gals are going to be bike mobile for FD however it gives me an idea for next year. Remember. Chicago. Cubs. Wait'll next year.

Thursday Nite Trashin. I get a headache just at the mention of the name. Was talking to IZN's kids (who are now in their forties) and they said he may be coming back to the area from CA. Hope when he does he buys something with a garage. :-) We could all sit around on Thursday nights and drink Geritol spiked with Viagra and get silly.

1370. Watch for the bike mobiles, 1C's, this weekend

Yahoo group: BMHA
Date: 2007-06-22 13:56:45 UTC
From: W3FF@aol.com
Topic: 1370 Message: 1370

Yesterday I worked Dave, N9DI, from his trike into Northern CA. Condx were not great, but we did manage a Q. Dave's a hoot.

That drillin' and fillin' Ron Baran, W9XS, is always there on FD. Hey Ron, hope we can catch each other on the weekend.

I'm in Northern CA. Will spend some time with the local guys at their operations, and will be on the trike here giving out contacts from Northern CA. A couple of pix here.....at the bottom of the tiny website.....www.w3ff.us.

Get out and get on the air. There will be lots of "forced" openings this weekend on Field Day. If you choose bike mobile, you will be a 1C and then you send your ARRL Section. Mine will be " 1C SV "

Budd

1371. Pictures of my Field Day setup using Trice XLNT and Buddistick

Yahoo group: BMHA
Date: 2007-06-24 23:14:36 UTC
From: Mike Nickolaus
Topic: 1371 Message: 1371

I posted a few pictures in the Photos section of my setup I used for Field Day 2007. The albumn name is Field Day 2007. My trike is a Trice XLNT and I attached the BOB trailer and put the batteries in the BOB bag along with the FT-817, Elecraft T1 autotuner and Buddistick bag and rode out to a local park and setup my station. I have a side bag on the trike and put the FT-817 and autotuner in it and attached the Buddistick on the back of the BOB frame. I ran the coax and power cable through BOB and the trike frame and to the radio and tuner. I used a set of Palm paddles for keying. I operated as 1B although I could have used 1C as I could be in motion if I wanted to. I didn't make a lot of contacts but did manage about 40 in the short time I operated on 20 and 15.

This setup wasn't intended to be an in motion setup but rather as a portable station using BOB as the transport mechanism. I do have plans however to attach an antenna to BOB that could be used in motion.

I would like to see what others used this year for field day and please post some of your pictures either in the PHOTO section or a link to your site.

73-Mike, NF0N

Nice setup, Mike. After looking at your station I would say that you could choose what class you want to be in. The 1C (mobile) does not require that you ever be in motion. I would say that most in that class are vehicles that are at rest - whether cars, RVs or boats.

What class did you declare? I like the idea of the BOB with the antenna and batteries. I use a comfort bike and all the added weight alters the handling characteristics. I've a feeling that the BOB makes it a much smoother ride. Or no?

1373. WB9GIE photos

Yahoo group: BMHA
Date: 2007-07-02 02:33:19 UTC
From: Elroy W. Shelley, Jr.
Topic: 1373 Message: 1373

I spent the weekend scanning a lot of old photos and HF bicycle contact QSL's, and uploading them to the WB9GIE photo folder here. I even got a QSL photo in there for a bicycle contact with Mike, NF0N (nice, trice bike there, Mike!) from back in the early 1990's...

Looking back, I think some of the QSL's could possibly represent confirmation of contacts for the 1st long distance HF bike-to-bike QSO, the first long distance HF bike-to-bike QSO with both sides running QRP power (under 5 watts), but, I'm not sure how to go about finding out for sure if those kinds of things had been accomplished earlier... I even have a QSL photo in there for a WB9GIE old 3-speed Huffy bike mobile to the USS Enterprise maritime mobile, maybe possibly the smallest HF mobile vehicle around at the time working the largest amateur rsdio mobile vehicle...

My last bicycle trip was back in 2001 when I cycled from Milwaukee, WI, to the Surf Ballroom, in Clear Lake, Iowa, where Buddy Holly, Richie Valens, and the Big Bopper played their last show... That was a nice trip and I have some bike photos in there of that as well... I even got a personal tour of the Surf Ballroom after the club manager saw me working people from the bike on HF out on the ballroom parking lot and came out to see what I was doing...

Anyway, going through the photos brought back a lot of memories... I even remember working BMHA founder Hartley Alley on my bike station here in Milwaukee, WI and he had to shut his station down mid-QSO due to a summer thunderstorm on his end...

I have more old articles and photos to scan, and, will try to get to those in the near future...

73's for now.

Elroy,

We have a newsletter editor now. I'm sure he would appreciate receiving any material you'd care to bright to light. I'm even more certain that we, his readers, would enjoy sharing your memories.

Last month friend even more ancient than myself, rode his motorcycle from Oregon to Texas and accompanied me from Dallas to The Devil's Den State Park in Arkansas. Somewhere in east Oklahoma, we paused at a bench at the side of a deserted back-road and waited for the rural silence to catch up with us. We were busy with our own thoughts. Mine were that we would not have traveled such a great distance so quickly on a bicycle, but we would certainly have had more to discuss while we rested.

Marty Basch, in his book, *Above The Circle*, states that "...the world turns more slowly from the seat of a bicycle...." Indeed, it does. But you already know that.

1375. Re: WB9GIE photos

Yahoo group: BMHA
Date: 2007-07-05 15:35:56 UTC
From: Elroy W. Shelley, Jr.
Topic: 1373 Message: 1375

Thanks, Scott, for your thoughts on all of these bike mobile items...

In 2002, I went from bicycling everyday to work and other places, to traveling full time around the country troubleshooting RF noise that affects RFID systems in hospitals, retirement homes, etc, for a company called RF Technologies, Inc, located in Brookfield, WI. That seriously cut into my bicycling time, but, on the other hand, I've been fortunate enough to see a lot of the country I haven't seen before... Monday and Tuesday of this week I was in St. Joseph, MO, and after a few local/regional site visits next week, I'll be heading to Athens, GA, soon. Three weeks ago I was out on Long Island, NY, for a week... I take my little VX-2R with me, and occasionally my FT-817, so it's possible I may meet a lot of people I've worked from the bicycle over the years on their local repeaters or in-person... It seems like actual bicycling time has dwindled to a lifetime minimum the past 5 years though... And, after turning 55 years old last winter, I may have to resort to some different techniques for staying in shape for any serious bicycling in the future...

Scott, there used to be a Sunday BMHA HF net on 20 meters back around 1990 or so that I used to check into from the bike, do you have any idea if the BMHA is still doing that? I think Mike, NF0N was net control back then...

73's for now

Elroy,

You probably have your travel/cycling details already figured out, but I'll pass along my wee bit of information, anyway.

When I lived in Oregon I spent a lot of time at Bike Friday, and I watched the in ital preparation to open a market in Australia.

The sales manager was preparing for the trip. Of course it was important that that after his arrival there be as much bicycle travel as possible.

Ian, one of the brothers, built a trailer on which his luggage would fit, and the trailer attached to an Air Friday.

Everything stowed in such a manner that the bike, trailer, and luggage went on the plane as carry on.

Of course, this all happened prior to 9/11, so that sort of thing might not be possible today.

My point: it may be possible to have a bike as a travel companion, as it were.

1378. MICHIGANDER FAT TIRE BIKE TOUR

Yahoo group: BMHA
Date: 2007-07-09 12:34:04 UTC
From: n8vip2004
Topic: 1378 Message: 1378

Hello everyone,

Well, the MICHIGANDER bike tour starts this Saturday and I am facing a mountain of details to get ready. I had someone lined up as ham radio sweeper, but she dillied and dallied and wasn't ready and missed all the exam dates. So, *I* who have only a 20 mile butt am going to plug myself into that position and sweep selected parts of the route that can't be swept by car. A good part of the ride each year is on Rail Trails and we use back roads to connect to other trails. I've been doing some 20 mile rides around town almost every day on the fat tire bike for the past two weeks and I'm looking forward to the experience. After all these years as Ham Radio Co-ordinator and mobile NCS, I am getting to ride bicycle mobile.

I'll try and give updates along the way. Wish me luck and I'll do my best not to shame the Bicycle mobile community.

Good ride everyone!

Craig / n8vip

1379. Fat Tire Bike Tour

Yahoo group: BMHA

From: Ham Pig at Play
Topic: 1379 Message: 1379

Craig,

That sounds like a lot of fun. I wish we had rails to trails out here, but the railroad tracks are just rusting and not being used.

You didn't say if you were going to be VHF - UHF mobile or HF mobile. If you are going HF mobile or take a multi-band rig with you, try to make some casual QSOs. Always a great reaction from the other ham when they find out they are talking with a ham on a bicycle. For a lot of them it is a first and really special.

Regardless if you are only on VHF or on HF, have fun and be safe, wear a helmet.
The doc said I would most likely be dead or paralyzed if I hadn't been wearing my helmet.

Thanks Rem,

Yes, I ALWAYS wear a helmet. The ride requires it anyway, so even if I didn't normally use a SkidLid I'd have to wear one for the MICHIGANDER.

I'll have my FT-817 HF QRP rig along for making contacts in camp, but for Bicycle Mobile it will be an Icom HT.

The net is run on 2 meter repeaters along our route, often more than two a day. The tour has hundreds of riders and not all the hams are bicycle mobile, a lot of the stationary SAGs are hams and use their radios once a year for this one event. When the ride is not on Rail/Trails I will probably be car mobile as I can cover more ground on patrol. The MICHIGANDER sets the bar pretty high for taking care of it's riders, no other ride in Michigan that I know of takes such efforts to always be on top of every situation. When you're dealing with hundreds of people you're going to have emergencies. That is what the 2 meter net is all about, as well as logistics and weather watch.

Well, back to the details of getting ready. Mark your calendars for next year, 3rd week in July every year, different route across Michigan every year, always featuring Rail/Trails, some paved, some "undeveloped" and two track, some back roads, always lots of fun.

1381. Re: Fat Tire Bike Tour...HELMETS

Yahoo group: BMHA
Date: 2007-07-11 13:06:31 UTC
From: Scott Laughlin
Topic: 1379 Message: 1381

Helmets are a good thing to wear.

Sunday I was riding an unfamiliar street, and decided to explore a city park. When I returned it exit onto the street, doing so was not convenient, I would have had to make a sharp 180. The entire block was vacant, so I decided to follow the sidewalk to the next ramp.

Ahead, the sidewalk was wet, looking as though someone had over-watered their lawn, and the excess had run across the sidewalk.

Not!

It was actually an underground water leak and beneath the skim of water was a growth of slime that exceeds the limits of my vocabulary. One moment the bike was beneath me, the next instant it was somewhere else. Still airborne, I was headed toward a large post made of local stone, and bound to hit it head first. I recall thinking how fortunate it was I decided to wear my helmet on this fateful morning. As it turned out, I landed in the grass on my hands and knees, and about a foot short of the impact.

I guess there will be no mental discussion about wearing the helmet from here on out.

1382. radio handlebar mount

Yahoo group: BMHA
Date: 2007-07-13 16:38:21 UTC
From: Scott
Topic: 1382 Message: 1382

I was perusing the internet looking for an easier way to mount my
radio to my bicycle (currently an htx-202 held down with zip ties),
and I came across this site.

http://www.smc-corp.com/Merchant2/merchant.mvc?
Screen=CTGY&Store_Code=S&Category_Code=BAM

These are actual handlebar mounts and seem to be reasonably priced.
Just thuoght I'd pass this along.

Without seeing it (just on general principal) .. it doesn't seem like a "good" solution to me. Personally, I would not mount an HT to my handlebars. WAY too much vibration. Some electronics (like GPS units) are built rugged enough to withstand such vibration, but I don't think most HT's are.

I suppose it all depends on the road surface you ride on .. and your particular radio .. but for me .. I carry my radio on my belt.

Might want to rethink the term rugged, Richard.

I've had an IC 706 MkIIG mounted on handlebars for the past five years and I put on over two thousand miles a year - for the last five years. You may be underestimating modern radios.

Richard,

Your point is well taken. If your bike has with smaller wheels, you may experience vibration. You can protect you stuff by using shock mounts. The old recip engines created a great deal of vibration through an aircraft fuselage. In some cases we even used tube holders to keep them in their sockets. It's just a thought that might be more trouble than it's worth.

I saw a photo of a ham with his radio fastened to his mid-section. My gut would provide more than enough protection.

1387. Re: [BMHA] radio handlebar mount

Yahoo group: BMHA
Date: 2007-07-14 02:01:19 UTC
From: Roger Cox
Topic: 1382 Message: 1387

About 10 years ago I was looking for a way to mount my HT to the bike handlebars. I ended up canabalizing a waterbottle holder w/nylon beltstrap. I cut each of the belts down to about 6" on each side, then wrapped these over the handlebars of my hybrid bike. I originally used velcro tabs glued to both the belts and bottleholder, but also backed them up with safety pins. It looked a little strange, but worked fine with my old vintage 1993 Kenwood HT with the controls on the top. Along with a Diamond 16" HT whip and either a hand mic or headset, it worked fine. I also padded the holder with some pink foam (from work) for extra padding. The newer, smaller HT's with controls on the front might be a problem with this holder, though.

I tried forming some aluminum later to make a cleaner looking mount, but it rattled and made other noises that bothered me, so I went back to what worked.

I have the Cycloblock mount on my bike, and it works great. I use a 7 LED AA flashlight http://www.streamlight.com/product/product.aspx?pid=24 that provides plenty of illumination for my casual nighttime rides (and with LED's it will run for 25-40 hours on a single set of batteries). I bought my mount several years ago from one of the big catalog outfits, but they have quit carrying it. I've wanted one for my wife's bike, but I haven't been able to find it since.

I have been looking for the same mount. I will be looking for successful posts.

However, in the short term, I discovered a set of hose clamps that have a built-in handle that will allow tightening without any tools. The solution was to take the first clamp and place in on the handlebar, and the second placed through the first, against the handle bar (or whatever tube that works for you), then place the flashlight through the second. Depending on the size of the handlebar, and the flashlight, different size clamps could be used.

If the clamps with the built-in handle are not available, simply use the old standby clamps. If you are not familiar with the clamp, open your vehicle hood and look at the radiator hose clamps.

Besides the neat items Jack, KE4LWT, linked to, there have been numerous threads on using flashlights for cycling on bikeforums.net. Check the commuting forum (esp. for older posts) and the electronics forum for more recent discussions. The most popular approaches seem to be using a combination of O-rings and foam blocks, or conduit hangers and hose clamps. Velcroing a mag light to a helmet (via straps through the vent holes) might work and provide an aimable helmet.

1400. BMHA Newsletter Article Appeal

Yahoo group: BMHA
Date: 2007-11-02 21:43:27 UTC
From: Mike Nickolaus
Topic: 1400 Message: 1400

This is an appeal for articles for the next BMHA newsletter. It is time to publish the next web BMHA newsletter but unfortuately we have no articles to publish. I know many of you have ideas and all you need to do is write it up and send to one of these folks:

n9zks@...
nf0n@...
bmha-webmaster@...

I will write a few myself but need all BMHA'ers to help with articles.

Thanks and I will await the flood of articles.

73-Mike, NF0N
nf0n@...

Topic: 1406 Message: 1407

Adam,

I've used APRS on a bike for a little over a year. It works good. Power is your most serious problem because the GPS is such a power hog. Two batteries and a solar panel might be the answer.

I used a Radio Shack 202 with 5 watts, a TinyTrak3, and a J pole made from 300 ohm tv lead. A J pole, not requiring a ground plane, gives the option of giving it more height.

PVC pipe works good for holding the tv lead rigid. However, some pipe have traces of metal in them. The only way I know of to find out is to cut a small section and put it in a microwave for about 15 seconds. If it heats up it's not going to work for an antenna.

Many APRS systems run high power. It's not necessary. You'd be surprised where these digis are hiding. I've found few dead spots between Dallas and the Socorro, New Mexico while following US 380.

Keep us posted with your progress.

Scott

1408. Re: [BMHA] APRS on a Bicycle

Yahoo group: BMHA
Date: 2007-11-12 13:54:44 UTC
From: n1evh@verizon.net
Topic: 1406 Message: 1408

Sometimes when I ride... I carry an APRS tracker with me.

At one time... Radio Shack sold a bicycle handlebar case designed for their FRS radios. I bought one... originally using it with my Yaesu FT-50R (which fit perfect in this case). Over the years... I've used it with my Yaesu
FT-51R (radio fit in the case good), Yaesu VX-5R (this radio also fit in the case great) and my Kenwood TH-D7A (this radio kind of just barely fits in the case and might of stretched it out a little... I wish I could find another
one of these cases or something similar to it).

On the handlebar of my bike... I cut a piece of 2" thick foam and wrapped it around my handlebar and put some gaffers tape over it to keep it in place

I then used that to put my Garmin ForeTrex 201 on my bike. I then made a small cable to go from the Garmin's serial out to the GPS input on the TH-D7A.

Now... the Garmin will last about 15 hours on a full charge... the TH-D7A won't last 15 hours on its own battery with the built-in TNC turned on. So bought 24 2600mAh AA cells off of eBay. I then went to Radio Shack and bought three 8 AA cell holders. I made up three 9.6v at 2600mAh "packs" and wired them in parallel (making it 7800mAh). The TH-D7A will put out 5w at just 9.6v (plus this pack is smaller and 1/2 the weight of a 12v 5Ah sealed lead acid battery). I then put the battery pack into a bag under my seat and ran a wire to my handlebar to power the TH-D7A with.

This gives me plenty of operating time for the TH-D7A with the built-in TNC turned on. It will last longer than the ForeTrex 201 will with a full charge

Now... this setup might be a bit more costly then what someone may want to do... but I had the TH-D7A and thought the Garmin ForeTrex 201 would be a perfect match for it. I've been playing with the idea of getting a RAM mount for the handlebar and replacing the ForeTrex 201 with my Garmin GPS III+ and powering that from the homemade battery pack too.

That's how I do APRS with my bike when I want to.

I've been planning an APRS station for my bike. I'll use my HTX-202 and probably a TinyTrak (http://www.byonics.com/tinytrak/). I've been looking at the Garmin GPS16 for the GPS.
https://buy.garmin.com/shop/shop.do?cID=158&pID=175
It's a GPS receiver and antenna in one that just outputs NMEA data. The cable from has 4 wires, two power and two data. I think it's a better solution than a standard GPS that will show your track and has a display, etc. I don't need all those things. All I want is to transmit my position.

A small gel-cell and a solar panel hanging by a bungie cord gives near
indefinite power. Hmmm - last time I did that was before before GPS
so the power requirements were much less. Still, the panel provides a
good power supplement to the battery.

A J-pole tied to a fiberglass safety flag makes a great solution.
Here's my favorite version of the J-Pole:

I have used the TinyTrak and OpenTracker both on my bike over the years. This was primarily for the Lincoln (Nebraska) Marathon, which lasts no more than 2.5 hours (following the lead runner). I ususally power the Deluo GPS and OpenTracker from an old IC2AT battery pack. 2 years ago I used a Yaesu FT-2400 on 5 watts with a 7 AH sealed battery. This year I just used a Yaesu FT-60R with it's standard battery. Both times, I used a 1/4-wave antenna on the bike rack behind me. For voice, I used another HT mounted on the handlebars with a Telex Stinger headset.

More info on my setup is on my web page at www.wb0dgf.com

I normally run a D7 with a Garmin III+ or Garmin 5 at all times when I am bicycle mobile. I use an ssid of "-7". The D7 and Garmin are carried on a modified chest pack which has a large pocket in which I have a 12 volt video camera battery. The "chest pack" is suspended from a set of Tri Bars mounted level on my handle bars. I made a cable to supply power to both the D7 and the Garmin.
I use a ear bud with a boom mike and an inline PTT which attach to my handlebar next to the goose neck so I can push it with my thumb with my hand on the top of by bar.
My antenna is mounted on a piece of metal extending off the rear of a clamp on rack mounted to my seat post. I use a Comet 3 Meter cable run forward to the radio.
My current antenna is a Comet C757 Challenger Antenna.
I have the same set up on my fixed gear and my Giant 980 C.
I'll be glad to send some pictures or discuss my setup further if you want.
With the good gain mobile dual bander I'm set up great and get into the repeater up 20 miles or so. I've had pretty good luck getting into Igates as measured by the completeness of the track on frindyou.com.

Hi Norm,

I'd like to see some photos if you'd care to load them up here. I don't know how many times I wondered why I didn't think of such and such.

I probably won't run any APRS until spring. The sun's gone. But winter is a good time to see what you're doing.

This is becoming a very interesting thread. I did have APRS on RAGBRAI two years for only one day. Just no repeaters to hear me with the ½ watt. Our RAGBRAI team leader, Gary, NQ0V had it on his bike every day on last years RAGBRAI but don't know if anyone picked up his signal. He running the TinyTrak I think.

Has anyone put together an article on this subject or about their bicycle APRS setup? We need articles for the BMHA newsletter. If anyone has an article please send to Norm Huber, N9ZKS or myself. This would be a great article, you will become a hero.

I am going to work on an article on my set up for the newsletter. I also have to go back through the past issues because I think I had an article earlier. I would appreciate other articles on alternative setups though.
I also need to work on some numbers on battery life with my setup. I think I need a solar panel to make my setup really useful.

By the way, my address is now n9zks@... I thought I had gotten it changed on Yahoo, but the latest thread came through on my old address.

Subject: [BMHA] Re: APRS on a Bicycle

This is becoming a very interesting thread. I did have APRS on RAGBRAI two years for only one day. Just no repeaters to hear me with the ? watt. Our RAGBRAI team leader, Gary, NQ0V had it on his bike every day on last years RAGBRAI but don't know if anyone picked up his signal. He running the TinyTrak I think.

Has anyone put together an article on this subject or about their bicycle APRS setup? We need articles for the BMHA newsletter. If anyone has an article please send to Norm Huber, N9ZKS or myself. This would be a great article, you will become a hero.

Mike, NF0N

I have my Velomobile being delivered Friday. I bought a micro300 with the 8 watt amp, along with one of their gps units. I am using that little wire antenna. I will need to build some sort of ground plane. I am going to keep the antenna within the velomobile shell. If you want an image just google aurora velomobile. BTW.. smart or otherwise, I bought a Yaesu FTM 10 for it. I will be interested to see if the electric assist motor and controller mess with the radios too much.

From: S. Earl Jarosh
Topic: 1406 Message: 1422

I too am interested in this as I and a friend are planning a 21 day trip starting from Duluth around Lake Superior next summer in July. I would like family and friends to be able to track us on a website plus I hope to make this a small fundraiser for the MS Society.

Pictures people, Pictures!! I am a visual guy, please upload to the files section on the group. You will see my old bike there with the Radio Shack pouch that was described by N1EVH and you will see a 1/2 wave marine antenna on the rack mount. Marine VHF antennas are designed for very harsh environments. Any 1/2 wave VHF antenna will provide superior performance on a bike as 1/2 wave antennas do not require a ground plane and they will work adequately an 70cm also. A J-pole is a 1/2 wave antenna; a little cumbersome on a bike but it works and is cheap to make.

Check out my pictures and description under N0HZ in Files.

A small gel-cell and a solar panel hanging by a bungie cord gives near indefinite power. Hmmm - last time I did that was before before GPS so the power requirements were much less. Still, the panel provides a good power supplement to the battery.

> I used a Radio Shack 202 with 5 watts, a TinyTrak3, and a J pole made

A J-pole tied to a fiberglass safety flag makes a great solution.
Here's my favorite version of the J-Pole:

I got a small inheritance and decided to go for it. I have been interested in these for years. Here is a page that talks price...

http://www.cambiecycles.com/velo.html

It isn't cheap. Plus, the electric drive system adds more. I have built and bought several electric vehicles through the years. When I started to enjoy bicycling as a pastime I started doing electric bikes. It's the only exercise I enjoy. I spent the Summer and early Fall biking to and from work. I like it for several reasons but mostly because with most exercise I am ready to quit after 15 minutes, but when going to work and back either I stay at it for the hour, or I don't make it to work or home! But the rain here in Seattle is enough to dampen the spirits as well as the body. With the velomobile I can now ride in rain or even modest ice. Or so goes the plan. So... I am commiting myself to a new bike design.. the first Aurora in the US. Will I do it? Will it work or be a bad design? As I get older and heavier I know I need to do something about my health. If this is what it takes.. and if this works... than it will be worth it.

They said they would deliver it to me along with a shipment of kayaks to a local dealer. Delivery was included in the price since I am near. We shall see what taxes get added.

I live fairly near Steve of Winnebiko fame. I'm not going to go quite that far!.. but I am going to add aprs, two meters that includes stereo and mp3 player input, and a fairly advanced alarm system. I have a Yaesu 817, but not sure I am going to add that.

Bryan,

You mentioned putting the antenna inside the shell. I would still recommend drilling a hole or doing a surface mount and mounting a 1/2 wave marine antenna like:
http://shakespeare-marine.com/antennas.asp?antenna=420 or
http://shakespeare-marine.com/antennas.asp?antenna=5242-a

The second one is like the one shown on my bike in the files section. It terminates in a so-239

There are also several Dual-Band VHF/UHF antennas that Comet offers where the VHF is a 1/2 wave and the UHF is 5/8 or multiple 5/8. On UHF this is less critical as almost any small metal mass including the feed line will act as a ground plane. Because of the small amount or in some cases the non-existent metal mass in today's bikes we should always be thinking 1/2 wave at VHF for best radiation pattern and performance. Without going into ridiculous electronic antenna theory, this is why you will find that all Marine antennas will be 1/2 wave with the assumption of being mounted on fiberglass. The only 8 ft CB (works for 10 meters) antenna that works on Fiberglass boats is made by Shakespeare (use to be also made for Radio Shack) and is a 1/2 wave using the unique designed specific length coax as the counterpoise.

Yes, I know you do not want to drill holes.

Cheers

Earl N0HZ

What kind of bike?
A dual battery set up is great.
On some bikes (like my FJR) it's difficult though.
High output stator is an option also.
I run a TON of gadgets on my bike.
Considering an on-board solar charging system at the moment.

There's lots of folks running APRS on motorcycles, me included.
There's a national motorcycle group running APRS serving a form of
search and rescue. Their website has tons of ideas and opinions. I
can't recall the name, but I'm sure a google will bring it up.

Please help us keep the focus on bicycles here.

Thanks, Scott/n7net, a moderator

I have two APRS bicycle setups. One is on my utility trailer towing MTB which uses an HTX-202, OpenTracker, Garmin GPS18, and a 2.2 Ah SLA battery. To conserve battery power the OpenTracker is also used to apply power to the HTX-202 (through a power transistor) a few seconds before each transmission. That permits it to be off most of the time but on long enough to detect if the channel is busy and hold off the packet until the channel is free. All of this is mounted in a weatherproof plastic container attached to a rack behind the seat. It uses a 1/4-wave antenna that attaches to an SO-239 connector on the rack. Since I normally only use this bike for towing a utility trailer no more than a few miles from home station, the 1/4 wave antenna works OK.

My other setup is on my road bike. It uses a D7 in a bag under the seat and a Garmin Foretrex 201 on the handle bars. The antenna is a Comet SBB-25 2m 5/8-wave antenna which attaches to an SO-239 connector on the rear rack. This is the bike I use for commuting.

I've never done RAGBRAI but I have taken my road bike on the Cedar Valley Nature Trail a few times between Cedar Rapids and Cedar Falls. My most recent CVNT trip was about a year ago. APRS coverage was pretty good in Waterloo (not Cedar Falls) and was excellent in Cedar Rapids thanks to a digi at the Collins facility just a few miles from the trail, and also a fill-in digi farther south in town. Thanks to the K0KBX-1 digi near Garrison we even had coverage on a middle portion of the trail. Coverage was spotty for about 20 miles south and east of Waterloo.

In the last year some new digis have appeared including K0HAM-9 near Belle Plain and K0HAM-10 near Morse. Coverage should be quite good in those areas of RAGBRAI goes near them next year.

Hi Earl,

For whatever it's worth...

I've used both a 5/8 and J-pole with bicycle APRS. I've grounded the coax shield to a bottle cage bolt and used the bike frame as a ground plane. I don't have any field strength figures to offer, but both the J and the 5/8 seemed to find the same digis.

Sorry.
I joined here to get some ideas on mounting for my motorcycle.
I still ride bicycles but I put WAY more time on motorcycles.
I'll go back to lurking now.
Sorry.

1433. APRS

Yahoo group: BMHA
Date: 2007-11-14 04:01:44 UTC
From: Barry Bogart
Topic: 1433 Message: 1433

I am an ultramarathon cyclist (Randonneur) and long-distance tourist. I have been using APRS for years. In both cases the purpose is to inform my friends and family where I am!

For the ultra events, which last up to nearly 4 days there are two issues. The first is power, as 90 hours on a set of batteries is impractical. The second issue is weight, as ultra competitors (even me) don't like to carry too much extra weight. These events usually go well into the boonies so digi coverage can also be a problem. The longest ones are 750 miles so you imagine that in the Pacific NW you can get a long way from Seattle, Vancouver, or Portland.

For touring it is a different story, as stops are planned and they probably include enough time and a source of power to recharge. Also because of the increased predictability the need to beacon my location is less important. I tend to stop at campsites, B&B's or motels where phones and email (using PocketMail) are available.

So I have two solutions. In both cases I use a Larsen half-wave whip which radiates quite well and no counterpoise is needed. On tours I use a D-7 and basic eTrex, but to save batteries I only turn on the radio periodically - typically at the top of one of the plentiful mountains that I always seem to ride over (in the PNW!). I use 4 2.9Ah AA batteries and can typically charge them overnight. I also carry 8 extras. Sometimes I use a 6.5w solar panel (on the bike rack or Bob trailer at all times) if I am camping in remote, powerless areas.

For the ultra events, the best I have come up with is a Vx-2r with a Foretrex and a TT3. This is ultralite but only gives me 3w. I use a 4w solar panel with 10 2.9Ah AA's. This is all quite marginal, powerwise over 4 days, and depends on good sun, but there isn't a lot of digi coverage anyway so it isn't much of a practical problem (roving digis is the only solution in the boonies, but we are talking about over 4 days and 750 miles!). Of course more power with batteries means more weight. Better solar arrays would be nice. My 6.5w panel is very light but is about 9x29 and does

not fit neatly on my ultra bike! My ultra bike has a
6w AC dynamo, and I HAVE thought about using it during
the day to top up the batteries (I need it for the
headlight at night).

1434. coast to coast against cancer - bike support?

Yahoo group: BMHA
Date: 2007-11-14 18:12:37 UTC
From: Barry Bogart
Topic: 1434 Message: 1434

I heard about this event from my local ARES group:
http://www.coasttocoastagainstcancer.org/events.html.

Does anyone know about the organization or event? I wonder how do they use amateur radio. I am very tempted to offer APRS capability, as was done in the Big Ride a few years ago.

Barry,

The link seems to be down. Maybe something is wrong in the address.

APRS would be a great advantage.

What about CW? A 40m QRP rig and a decent antenna might work most evenings and not kill the battery in the process. Or those who find no pleasure in CW might be interested in accessing the local 2m traffic nets each evening? This could be a shot in the arm for combined effort of BMHA and NTS.

I can't speak for your QTH, but in North Texas the NTS is hungry for traffic.

Any ideas?

Hey folks...

Just went to the site... It is Canadian. So for you folks looking
to help out, ummmm you gotta go to Canada or organize cancer
fighting bike events here in the U.S.

I should clarify that the APRS station is actually on the bicycle.
It's just on the mountain bike I use for towing a utility trailer.
The trailer itself is from Bikes At Work, Inc. I will try to get some
photos taken this weekend.

Mention was made earlier about using the Micro-Trak with an 8 watt amp- it appears to me that it's a bit high-powered to be using without a receiver to check for activity on the channel. It also doesn't digipeat packets, so it's less cooperative in a caouple of ways.

I was running a Pocket Tracker with a ETrek for a while, so my wife could keep track of me. But it failed, I got divorced, and it's one more bit of awkwardness when folding my Bike Friday NWT, so...

BMW F650 GS Dakar. Yandina makes a Battery Combiner 100, and with a PowerPole connector across the bike battery (400W alternator), I should be able to connect and disconnect easily. I have the stock BMW City Bags (junk, but farkleable), and I'll put a battery in there, until I can get a set of Jesse's.

I'll certainly put Farklemasters higher on my list of places to shop, now.

What kind of bike?
A dual battery set up is great.
On some bikes (like my FJR) it's difficult though.
High output stator is an option also.
I run a TON of gadgets on my bike.
Considering an on-board solar charging system at the moment.

Several ways. The easiest is simple APRS one-line messages to Mail.
A more elaborate method is integrated with Winlink2k.

http://web.usna.navy.mil/~bruninga/aprs/APRS-WL2K.txt

Even more beyond that but these are the quickest to get going.

It's tacky to reply to my own message but I just noticed Bob's posting

was simply a proposal. Here's the docs on the actual implementation:

http://www.winlink. org/APRSLink. htm

1448. WB7NXC Velomobile

Yahoo group: BMHA
Date: 2007-11-21 18:59:55 UTC
From: Bryan Lowe
Topic: 1448 Message: 1448

My Aurora Velomobile from Rainforest Designs, aka Nimbus Kayak, arrived two days ago. I posted pictures under WB7NXC in the photo section. It was early morning, so photos are dark. Better photos soon.

Now to outfit it with some radios!

Bryan
Seattle

Barry,

Somehow your post caused an instant recall of Steven Roberts and his Winnabiko (I can't remember his call), and an event that occurred before APRS became a reality. It's been awhile, so I'll have to paraphrase.

Finding a motorist stalled in the desert, he coasted to a stop and asked how he could help. The guy looked at him like he was crazy because he needed someone to jump start his car. Roberts said he couldn't give him a jump, but with all the ham radios he had strapped on his bike he quickly summoned help.

Bryan,

Your Velomobile looks really interesting. Have you thought about antennas? Will you have to drill holes for them, or do you have a better idea?

Hi Scott,

Thanks for your note. I appreciate your tone. Why do I say that? I posted to a few groups, hoping to get and share ideas. In one velomobile group the responses have basically been, "I hope it isn't as slow as it is ugly!" Beauty is in the eye of the beholder, but that is besides the point to me. I just think.. what a sad face to present to another human being.

Anyways.... It is a delta trike.. one wheel in front, two in back. It is my third delta so I feel pretty aware of their pros and cons. They are more tippy than the tadpole trikes, but deltas are more visible, or so it seems to me anyway.

I bought one of those FTM-10r radios. I bought it with the yeasu antenna designed for it, but it seems that wasn't a great choice given lack of ground plane. Could I hang a wire down as the other half? There is room. I had hoped to mount it inside the body, but it is kevlar and I don't know that it would radiate much! I would appreciate any feedback from anyone.

I was the guy that mentioned the APRS micro300 with the 8 watt amp. Someone brought up some good points about how polite, in effect, that was. I think they are right. I will keep it at 300 mw for now, and get something else later. Any other thoughts on that? Forgive my ignorance, but there would be no effective ground plane with kevlar.. right?

I have an 817, but not sure I want to mount it.

I've noticed that the electric assist motor, and more likely, the controller, does create some hash on my handheld ft-5. When someone talks, no problem, but there is noise that breaks the squelch when nobody is talking.

Oh.. and I would be willing to drill a hole, but would prefer not to! I may post a picture of the location I am thinking of.

By the way, here is youtube site with my first video of the velo. It was taken tonight to show the rear lighting system.

http://www.youtube.com/profile?user=AuroraVelo

Thanks

Bryan

Hi Bryan,

How is a delta trike more visible than a tadpole?

It seems that extensions for supporting the antennas would be better than drilling holes. You can always drill holes as a last resort, and it would be better than a "I wish I would of...." Some of the 18-wheelers have vertical rods marking the front corners of their tractors. Would that work for your antennas?

The bike frame seems to work pretty well as a ground plane. I've used a water bottle cage bolt to ground the shield for APRS and it worked good.

While searching for a 40-meter vertical antenna configuration on HF Pack, I came across a report where a cyclist was dragging a counter poise behind him when a car happen to run over it and the cyclist did a header over the handlebars. It's not funny, but I still had to laugh. hi hi.

I don't know what kind of interference the motor might cause. When I had my 2m 5/8 wave antenna on the front pannier rack I had reports of clinking sounds in my transmitted signal. The source was the odometer.

I think you're going to have a lot of fun with that.

As for power assist, I watched a car race once that was sponsored by the Willamette High School in Eugene, Oregon. The kids built these cars from the gound up. One of the rules I recall was no more than 80 pounds for battery weight, and I believe the total distance was ten miles.

http://www.econogics.com/ev/electhon.htm

If you're interested the above link is a place to start.

Press on.

> How is a delta trike more visible than a tadpole?

To me it seems that virtually all of those tadpoles are very low slung. Most of the deltas are much taller. I think in the end, though, it is a total matter of taste.

It might. The manufacturer debated on drilling a hole in the very rear end in order to install a bike flag. I suppose putting in a hole there that is lined with a tube so that the hole can support an antenna/bike flag for me... and simply a bike flag for anyone who would buy it from me.

> The bike frame seems to work pretty well as a ground plane. I've

This Velo has kevlar unibody construction. No metal frame!

> I think you're going to have a lot of fun with that.

Thanks. It has been fun so far. I've had a bad couple of days at work. In the past people have told me that exercise can be a great way to deal with stress. I just didn't experience that. Now I am.

Bryan,

Maybe you could hot glue a wire along the kevlar frame and use that
as a counter poise? Just an idea.

That makes sense. I've also thought of using that copper stick on strip material that they use for glass breaking alarms in stores.

Just one more thought. Here is a side by side shot of the tadpole and Delta trike versions of velomobiles made by Rain Forest Designs. I think it shows the difference in stature.
